GM puts Stempel in industry's toughest job

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — The ascension of Robert C. Stempel to chairman of General Motors gives him the chance to be the most powerful GM chief executive in 30 years.

The new chief executive officer won't even have a chief operating officer behind him when he takes over Aug. 1.

Faced with the likelihood of difficult labor negotiations and with the launch of the brand-new Saturn car in his first months on the job, Stempel will need a strong power base.

Last week, he reiterated GM's goal to regain a 40 percent share of the U.S. car market. He plans to do that with the current GM executive team, minus only Chairman Roger B. Smith, who retires July 31.

Dealers happy about 'car guys,' Page 7

GM had 34.83 percent of the new-car market last year, down from 46.41 percent in 1980.

In the new team, only Stempel's job really changes. The other executives who will report to Stempel retain their current duties.

Lloyd Reuss, who was considered by many to be out of the running for a top job, was named president, in charge of North American automotive operations. But for the first time in 32 years, the president's job will not carry the clear No. 2 designation of chief operating officer.

All but one member of the top management team report to Stempel. William E. Hoglund, who remains executive vice president in charge of component operations, will report to Reuss.

Two other top executives — John F. "Jack" Smith Jr. and Robert J. Schultz — were promoted to vice chairman while retaining their current responsibilities. By carrying the same top executives who have served him and Roger Smith, Stempel leads a familiar team into battle against a familiar set of problems.

His first dramatic problem will come during his first seven weeks as chairman: GM's three-year contract with the UAW expires Sept. 14. While all analysts predict that Stempel will have to close some under-used plants, the UAW will insist on job security in negotiating a new contract.

At the same time, Stempel must oversee the Saturn launch next fall. Saturn Corp., GM's start-from-scratch car company, puts its first product on sale in November.

Stempel said Saturn will move ahead as envisioned as a separate GM division with a separate dealer network despite speculation that Saturn could undergo massive change when its father, Roger Smith, retires.

When asked last week if Saturn cars might be sold through other GM dealerships a year from now, Stempel sternly replied: "Just let us get the car launched and have people beating our doors down to buy them."

Stempel must also reverse GM's decline in U.S. market share, raise manufacturing quality and slash costs. Analysts say that besides closing plants, he will have to cut deeper into the salaried ranks.

Under Roger Smith, GM spent heavily on automation but remained a high-cost producer.

Stempel's supporters hope the new chairman will act boldly, as he did in previous GM jobs. As Pontiac general manager (1978-80), he initiated the design work on the innovative Fiero, a two-seat plastic-bodied car. Stempel is credited with laying the foundation for the dramatic turnaround of GM's fortunes in Europe when he headed Opel from 1980 to 1984.

Cherokee value model aimed at new rivals

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Corp. will introduce a "value" model of the Jeep Cherokee in the 1991 model year to battle new competition in the sport-utility market.

The high-volume model will carry a range of standard equipment and is designed to offset Chrysler's vulnerability at the lower end of the compact sport-utility market.

Chrysler insists the model will not be a price leader or a stripped version of the Cherokee.

In addition, 1991 Cherokee models will be powered by a higher output version of the vehicle's 4-liter six-cylinder engine, and high-end Cherokee models will get cosmetic enhancements.

A new Jeep Cherokee advertising campaign that more strongly emphasizes the vehicle's product attributes will break in May.

Chrysler's moves come as the competition in the compact sport-utility market has intensified.

Citroen plans U.S. return with luxury XM

By Jim Henry and Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTERS

France's Citroen plans to return to the American market, where it last sold cars in 1974.

Automobiles Citroen will launch a U.S. version of its luxury four-door XM hatchback by about the 1992 model year. The car will be on display at the New York auto show, which opens Saturday.

The U.S. XM is likely to be based on the European version with a 170-horsepower V-6 engine.

The XM announcement was imprecise on the car's introduction date. A statement from Citroen Cars Co. U.S.A. said: "It is unlikely that the U.S. model XM will be built before the 1992 model year."

Citroen Cars Co. will initially operate from the offices of Peugeot Motors of America in Lyndhurst, N.J. Automobiles Peugeot and Automobiles Citroen are members of the Peugeot S.A. group of France.

The front-drive XM, introduced last year in March and voted 1989 European Car of the Year by European journalists, shares a platform with the Peugeot 605 sedan.

The U.S. introduction of the 605 is also expected "not before the 1992 model year," according to a spokesperson for Peugeot Motors of America.

Japan workers unhappy with 6% raise

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — The Japan Auto Workers last week settled for what union representatives called a "disappointing" 5.99 percent average wage hike. It means workers will get about $89 more a month.

The industry has a severe labor shortage. Most plants are operating at full capacity with heavy overtime, and most of the companies are rich after several years of record profits. But those factors had little effect on the settlement.

The recent fall in the stock market and the weakening yen proved too overwhelming. The timing of negotiations, just as the stock market was coming apart, was "unlucky," a union official said.

Last year, the union won an average increase of 5.13 percent from the 11 car and truck manufacturers.

The union sought an 8 percent hike this year. But Eiji Suzuki, president of the Japan Federation of Employers Associations, called 8 percent inflationary and insisted that the increase should be less than 6 percent.

That view was sustained despite strenuous efforts by the union to push past 6 percent. "The 6 percent barrier was a lot tougher than the Berlin Wall," said Takeo Kitamura, assistant director of the International Division of the Japan Auto Workers.

Toyota Motor Corp. was the focus of this year's negotiations. It set the tone for the automakers and for other manufacturing industries. Toyota's final offer was an increase of 15,300 yen ($97) a month, which was a raise of 5.9 percent.

Nissan Motor Co. Ltd. and Honda Motor Co. followed Toyota's lead and settled for 100 yen less. The average increase for the industry was 14,117 yen ($89), making average pay base 236,031 ($1,493) a month, excluding benefits. That is $17,193 a year. Including bonus, which last year averaged 5½ months' pay, the average annual pay is $26,127.

With its strong financial position, Toyota could have offered more, but it had to consider social pressures to keep in line with other companies, said labor specialist Haruo Shimada of Keio University. "The Toyota union knew that," he said.

The head of the Toyota union reportedly complained that it was difficult to push for a higher wage with the eyes of the public focused on his union.

But factory workers who live in rural areas and tend to own homes are comparatively well off, according to Shimada. Those suffering are the white-collar workers who have to cope with enormous land prices in Tokyo, he said.

This year, the union did not negotiate for fewer hours, despite heavy overtime, which amounted to 6.5 hours a week in 1988 and was much higher last year.

But the union did get all companies to agree to a standard 15 paid vacation days after one year of work up to a maximum of 20 days.

Workers have been taking, on average, fewer than 10 days a year regardless of the number to which they are entitled.

The union asked each company to set up a system in which a worker would feel comfortable taking three consecutive days off. That would mean organizing shifts so single workers would not be leaving their work station unattended.

Most companies agreed, although a timetable to start such a program and ways to implement it were left for further discussion.

Europeans hike prices in Japan as yen declines

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Many analysts are forecasting that the yen, which began the year at 145 to the U.S. dollar, will stay at around 160 to 170 to the dollar for the rest of the year.

The "falling" of the yen, wherein it takes more yen to equal one dollar, makes exports somewhat cheaper for Japanese companies, but also increases the cost of imported raw materials and finished goods such as new cars from Europe and the United States.

There will likely be a delay before the real effects of the yen's decline are noticed.

For example, the Japanese automakers' next six-month

Buick racing: Winning on Monday, even when Sunday ends up a loser

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

FLINT, Mich. — When Buick goes racing, it does so unlike any other General Motors division. For Buick, racing is a marketing effort, not primarily an engineering exercise.

Essentially, Buick's Motorsports Competition Program is a group of race engine developers whose job is to sell production cars.

"The biggest, most important reason (why we race) is that dealers can sell cars when we are racing," said Joseph M. Negri, manager of Buick Special Products.

"It is said that you win on Sunday and sell on Monday. I believe you don't have to win on Sunday to sell on Monday — you have to be competitive, and that has an effect on sales. That doesn't mean we don't want to win — that is our goal. But our presence in racing helps our (production-car) sales, and that's why we do it," he said.

Selling cars is the ultimate goal at GM's other divisions — as well as other companies — that compete in motorsports. But spokespersons at Chevrolet, Pontiac and Oldsmobile said their programs are driven — and funded — by both their engineering and marketing departments.

That is not the case with Buick. Negri said his Motorsports Competition Programs are funded 100 percent by Buick's marketing department. He estimated that equals 5 to 10 percent of the division's total marketing budget.

Buick would not be racing were it not for a question posed by then-General Manager Lloyd Reuss in 1981 — a question born in engineering. Reuss asked if Buick could be competitive at the Indianapolis 500 with a stock-block push-rod V-6 powerplant in an effort to prove the engine's power and reliability.

It appears to have been a question well worth asking. Last year, competing in NASCAR, Championship Auto Racing Teams Inc. Indy cars and International Motor Sports Association Inc.'s Camel Light series, Buick-powered cars

see BUICK, page 38

Joseph Negri, manager of Buick Special Products, believes the division's V-6 racing engine helps boost passenger-car sales even if it doesn't always get the checkered flag first.

Mercedes, Buick, Toyota rated most dependable of '85 cars

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

More than a dozen makes scored well in the new J.D. Power and Associates 1990 Vehicle Dependability Index of 1985 Model Year Cars. But most of those manufacturers won't be flaunting their rankings in upcoming advertising.

In fact, only four advertising claims are likely to result from the survey.

They are:

- Mercedes-Benz: No. 1 in vehicle dependability for 1985 models.
- Buick, highest-ranking domestic brand in vehicle dependability for 1985 models.
- Toyota, highest-ranking Asian brand in vehicle dependability for 1985s.
- General Motors, highest-ranking domestic manufacturer in vehicle dependability for 1985 models.

J.D. Power Dependability Index

Rank	Brand	Index
1	Mercedes-Benz	149
2	Toyota	143
3	Honda	137
4	Buick	133
5	Cadillac	121
6 (tie)	BMW	120
6 (tie)	Porsche	120
8	Lincoln	116
9	Oldsmobile	105
10	Mercury	104
11	Mazda	103
12	Pontiac	100
Industry average		100

Survey rated 1985 model year cars

Power restricts advertising use of its survey results to the top-rated makes in those four categories.

Last fall, Power announced that it is drawing a tighter framework around its advertising policy as a result of the increasing number of Power survey references in advertising.

Patricia Patano, director of marketing and special projects at the Agoura Hills, Calif., research firm, said the purpose of the index and other Power surveys is to give manufacturers voice-of-consumer facts, not to help them in advertising.

"You could take any one study and have every manufacturer be No. 1 in something," said Patano. "If the consumer can't differentiate, ultimately, no one wins."

The first-time index surveyed people who had owned their 1985 cars from the time they were new until 1989. They were asked about problems they had encountered in the last year, the actual vs. the expected durability of various components, the replacement levels for specific parts and the warranty work required.

Asian makes scored 104 as a group, besting their domestic counterparts, which scored a collective 99, and the Europeans makes, which scored a collective 97.

Still, European-bult Mercedes-Benz led the pack with a score of 149, followed by Toyota with 143 and Honda with 137.

With four of GM's five divisions placing above industry average, its corporate score was 111.

Ford Motor Co. received an overall score of 104.

Power, which has a policy of not releasing information about manufacturers that scored poorly in its surveys, did not mention Chrysler in its dependability index.

Service, dealers core of new GMC line

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

JANESVILLE, Wis. — Way back when its new medium-duty trucks were still on the drawing board, GMC Truck Division set out to design the service support and the service network it would need to assure total customer satisfaction.

According to Donald S. Kane, GMC general service manager, the service program evolved from five strategies — one-stop service, a certified service network, parts support, service for the Caterpillar 3116 engine and owner protection.

Service readiness began with the design of serviceability features into the GMC TopKick/Chevrolet Kodiak and continued through the preparation of the service requirements, Kane told the press during a visit to the plant where the new trucks are assembled.

"To provide the right product support and service readiness," Kane said, "we stepped back and took a new look at the medium-duty truck market."

The first step, he said, was to go to customers, dealers and the dealer council for feedback on their requirements and to determine what one-stop service and customer satisfaction really mean to truck owners and customers.

"What we learned wasn't surprising," Kane said. "Everyone agreed customers don't want to go one place for an engine repair and another for a maintenance procedure or other service requirement.

"They want a dealer committed to customer satisfaction long after the sale. They want to rely on one experienced professional TopKick and Kodiak dealer, or a network of such dealers."

With that in mind, Kane said, GMC set out to formulate a plan — "one that involved training personnel, providing sufficient information, the right tools and equipment and the proper parts and material, all designed to result in maximum uptime for the trucks and a new, proud, true service network of TopKick/Kodiak one-stop customer service."

Kane said the new network is fully certified to do what it takes to assure customer satisfaction.

"It really is a new service culture at General Motors medium trucks," Kane said. "Our new, smaller, leaner and tougher core of dealers (from 7,500 in 1984 to 700 today) sit on a solid financial platform with a desire and an interest to be in this business."

To support dealers, he said, GMC is putting its people, resources, system and program behind them to provide "frontline technology so that our dealers continue to share in GM's diagnostic leadership."

Those capabilities range from the electronic control module on gasoline engines to the vehicle service monitor that records data for analysis by an on-the-phone factory analyst — a first, Kane said, in the medium-truck industry.

He said the division's service parts system, assisted by General Motors' Service Parts Operation, has committed "to being the best in the parts service in the industry."

"That means assuring that all parts are readily available and that parts pricing is competitive in the marketplace," Kane said.

Dealers, he said, meet parts stocking levels determined by their market area, but if the part is not on the shelf, next-day delivery will be a standard factor of the system.

He said dealers are committed to full service on the Caterpillar 3116 diesel engine, with backup parts and service support.

The warranty, Kane said, is the final ingredient in GMC's program to assure customer satisfaction.

"Our basic warranty backs the TopKick and Kodiak for 24 months, unlimited mileage," he said. "The domestic competition goes half of that."

The warranty on the new electronic-fuel-injection gasoline engine is 24 months/unlimited mileage with no prorating. The Caterpillar 3116 diesel is warranted for 36 months/150,000 miles.

Cab corrosion is warranted for 60 months/unlimited mileage, and frame rails also carry a 60-month/unlimited-mileage warranty.

For further protection beyond the warranty, a full GM Protection Plan is available on the total vehicle and gas and diesel engines. If only the diesel engine protection is requested, the Caterpillar extended service coverage program is available. Those plans cover five to six years and up to 200,000 miles.

SERVICE INDEX 113.6*

	Feb., '90 vs. Feb., '89	Jan.-Feb., '90 vs. Jan.-Feb., '89
Gross Profit on All Labor and P&A Sales	+13.4%	+12.0%
Repair Orders Written	+ 0.1%	+ 1.1%
Total Labor Sales (Customer & Warranty)	+ 5.0%	+ 6.5%
Shop Parts Sales (Customer & Warranty)	+12.0%	+ 9.7%
Sales of All P&A	+15.0%	+13.1%

* Survey by Automotive News shows that dealers' service and parts business in February 1990 was 113.6 percent of business in February 1989. Service business in the first 2 months of 1990 was 112.9 percent of business in the corresponding period in 1989.

Service Index rises 1.3%

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

New-car dealers' service and parts business continued its roll in February by topping the increase achieved in January by 1.3 percentage points, according to the Automotive News Service Index.

February's shop volume amounted to 113.6 percent of the volume recorded by dealers in February 1989. January's volume was 112.3 percent of the business reported in January 1989.

February also marked the first time since last May that all five indicators in the Service Index showed increases. Some dealers attributed the good showing to increased vehicle sales in 1989. Others noted hourly rate increases for warranty and service work.

The No. 1 indicator in February was sales of all parts and accessories, which recorded an increase of 15.0 percent over year-ago sales.

The runner-up was gross profit on all labor, parts and accessory sales — dealers' most important indicator. Profits rose 13.4 percent.

Shop parts sales, used on both customer-paid and warranty repairs, jumped 12.0 percent. Total labor sales (customer-paid and warranty) were up 5 percent over 1989 volume. Repair orders written were up 0.1 percent in February.

Service Index figures are averages compiled from shop operations reports on a sampling of the nation's new-car dealerships.

Poling sets tone as Ford opens pre-delivery center

MIRA LOMA, Calif. — Harold Poling, Ford Motor Co. chairman, formally opened a new pre-delivery center here by driving a 1990 Lincoln Town Car onto the line for servicing.

The Town Car was the 1.5-millionth vehicle processed by the Los Angeles-area center of Predelivery Service Corp., a wholly owned Ford subsidiary. The corporation also operates centers in San Francisco and Baltimore.

The 69,000-square-foot facility will prepare more than 100,000 new vehicles annually for delivery to Southern California Ford and Lincoln-Mercury dealers.

New cars and trucks from Ford plants in the United States and Mexico are inspected, road tested and cleaned at the center to ensure that they are customer-ready before being shipped to dealers, said Bob Garber, manager of the center.

A 35-item pre-delivery checklist includes everything from body appearance to emissions controls and driveability, Garber said. The center also stores vehicles for dealers, alleviating a space crunch created by escalating real estate prices.

By turning time-intensive vehicle prep work over to specialists, dealerships free technicians for service department workloads.

Approximately 45 percent of Southern California's 156 Ford and L-M dealers use the pre-delivery service to process their new vehicles, paying fees ranging from $60 for an Escort to $90 for a Town Car. The other dealers handle their own pre-delivery work.

"A quality product is just the first step," Poling told 300 employees, dealers and guests at the center's dedication. "Beyond that, to truly satisfy our customers, we also must provide quality care after the product leaves the factory."

Jim Burke, owner of Jim Burke Ford and Jim Burke Lincoln-Mercury in Bakersfield, Calif., said the services provided enable him to maintain high quality control.

"Without proper prep, we could never meet customer expectations," Burke said. "Preparation is the key to getting the customer relationship started right."

Lee Miskowski, general manager of Ford Parts and Service Division, agreed. "A customer's first experience with his or her new vehicle is one of the most critical moments in the dealer-customer relationship," he said.

"Making sure that the vehicles are prepared with kid gloves is one of the most critical things we can do to achieve our company goal of having the world's most satisfied customers."

Cutting the cake at the opening of Ford's new pre-delivery center are, from left: Lee Miskowski, general manager of Ford Parts and Service Division; Bob Garber, manager of the center; and Harold Poling, Ford chairman.

Allstate database uses non-OEM parts

NORTHBROOK, Ill. — Allstate Insurance Co. said it has expanded its claims estimating to include a database with one of the largest selections of original-equipment-manufacturer and non-OEM aftermarket automotive parts.

Allstate said the system will increase use of non-OEM automotive parts to repair damaged vehicles. Similar databases with different criteria for usage are being used by some 50 other insurers to estimate claims, according to a spokesman for Automatic Data Processing of San Ramon, Calif., the database supplier.

"We've always advocated the use of these (non-OEM) parts as a means to control claim costs," said Bill Tortorello, director of auto claims for Allstate. "Our move is an aggressive step toward increasing this usage."

SERVICE BRIEFS

Trouble shoot under way

ORLANDO, Fla. — Nearly 7,500 students are competing for more than $1.5 million in scholarships and prizes in state competitions in the 1990 Plymouth-American Automobile Association Trouble Shooting Contest.

The state contests, which started with 1,860 high school and vocational school programs, will trim the field to 50 teams for the June 18 finals in Washington.

Said to be the world's largest high school automotive technicians' competition, the program is designed to encourage students to pursue auto service careers.

Tire hall seeks nominees

WASHINGTON — The Tire Industry Hall of Fame Committee is soliciting nominations for 1990.

The Hall of Fame honors individuals who played a significant role in the growth and development of the tire industry. Nominees are drawn from all facets of the industry. Names should be submitted by May 1 to the National Tire Dealers and Retreaders Association at (800) 87-NTDRA.

Certification test offered

WHITTIER, Calif. — The Auto International Association has announced the Import Parts Certification Program for specialists in the import-vehicle service profession.

Essentially designed for countermen, the certification program is available to anyone who deals in import parts, including technicians, service writers and those in related fields of responsibility, according to the association.

Dick Wells, the association's national director, said anyone in the import parts field can enroll as a participant, take the test and receive certification after successfully completing the test.

Chrysler joins fast lube

HIGHLAND PARK, Mich. — Mopar Xpress Lube, a quick oil and filter change service, will be introduced by Chrysler Corp. dealers in 25 service zones starting July 31.

According to Ted R. Cunningham, vice president of Service and Parts Operations, dealers participating in the program will offer a complete oil and filter change in 30 minutes or the service is free.

Dealers will dedicate a bay in their service department to the program and maintain separate, specially trained personnel who will perform the service.

Participating dealerships will use Mopar oil and filters and will be identified with signs.

AROUND THE WORLD

Lexus automation has pros and cons

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Automation on the line that produces Toyota Motor Corp.'s Lexus LS400 does not reduce manpower or costs, does not increase speed and adds little to efficiency.

The most obvious and advanced automation applied to the line is there to make better parts — not to change the production system.

Ichiro Suzuki, Lexus chief engineer, said that when he was considering automation for Lexus, he thought of components first.

"I wanted higher precision parts," he said. Body assembly automation could come later, with more volume, he explained.

While most Japanese makers, Toyota included, are increasing automation on final assembly up to 30 percent, largely to compensate for a labor shortage, the Lexus line has taken a different tack.

The new body shop at the Tahara plant is notable for its wealth of quality control equipment. A laser-equipped robot brazes and grinds joints where the roof and rear panel meet. An inline, 3-dimensional measuring machine checks one of every 30 cylinder blocks. Gauges measure engine parts performance once every two hours. Two separate final assembly lines measure all units for noise and vibration.

But all the inspections mean a production rate of one every four minutes for Lexus compared with the usual one a minute on most Toyota lines. There are 10 percent more inspectors on the Lexus line. The process takes three to four times longer. And the cost is 50 percent higher than for the Crown, the previous top-line model.

Setsuro Sekiya, general manager at Tahara, said the company is putting more into Lexus. At the same time, he said, it is trying to reduce costs. A substantial part of the extra 50 percent in costs is in the inspection area, he said. Sekiya suggested that maybe next time the engineers could offer a car that is easier to produce.

The Tahara plant is also starting to apply systems to control quality in final assembly. It has adopted an automatically controlled identity tag that turns on a work station signal light to enable workers to select correct parts.

Toyota is also applying a new assembly line control system for greater production flexibility and to shorten lead time between dealer and plant. It has been introduced at Tahara and will be expanded to other plants.

Under the new system, orders can be accepted up to three days before production instead of four, said Shionoya Masaru, general manager for information systems.

Lexus inspection costs run about 50 percent higher than on Toyota's Crown.

European sales pace slows, but still tops '89

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — European new-car sales leveled off in February but still topped last year's total.

February sales were 1,088,100, an increase of 0.6 percent. For the first two months of this year, the total was 2,358,800, a gain of 1.8 percent over 1989, according to industry estimates compiled by *Automotive News*.

The Fiat Auto S.p.A. group clung to first place in the two-month period. Italy was the largest national market.

New-car sales in Western Europe have been growing despite expectations of a downturn for more than two years. But the momentum appears to be slowing.

The biggest falloff in February was in the United Kingdom, where rising interest rates were blamed for a 11.8 percent drop to 167,400. Sales were down 8.8 percent to 373,800 in the first two months.

Spain, the fifth-largest market, was off 11.6 percent to 162,500 after two months, but the Italian, West German and French markets recorded year-to-date increases. Italian sales were up 0.9 percent to 481,000; Germany's increased 8.7 percent to 436,300; and France's climbed 13.3 percent to 426,700.

Fiat, including Lancia and Alfa Romeo, was the two-month leader, following a 4.1 percent February increase to 171,100 units. But two-month sales were down 4.2 percent to 374,400, equal to a 15.9 percent European market share.

Volkswagen AG group sales, comprising VW, Audi and Seat, rose 5 percent to 164,400 in February and 7.7 percent for the year to 341,100, a 14.5 percent share.

Peugeot S.A., including Automobiles Peugeot and Automobiles Citroen, edged upward by just under 1 percent in February to 145,500. After two months, the group was down less than 1 percent to 316,600, a 13.4 percent share.

Among the rest of Europe's big six makers, GM held an 11.1 percent share after two months on sales of 262,700, a 4.9 percent increase. Regie Nationales des Usines Renault had 10.9 percent of the market on sales of 257,700, a year-to-year gain of 9.7 percent. Ford Motor Co., with sales of 257,600, had 10.9 percent of the market and was down 0.8 percent in volume.

NEW-CAR SALES BY COUNTRY IN EUROPE

Country	2 Months 1990	Pct. change vs. 1989
Italy	481,000	+ 0.9
Germany	436,300	+ 8.7
France	426,700	+13.3
United Kingdom	373,800	- 8.8
Spain	162,500	-11.6

March ends with a gain, but car sales dip for month

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

The beginning of the spring selling season for U.S. carmakers and importers got off to a shaky start in March as car sales fell 3.21 percent to 851,170.

March's disappointing results followed a drop in total car sales for February.

Sales of U.S.-built cars were up 3.53 percent for March 21-31, following declines in the first two 10-day periods of March.

Japanese automakers gained 4.13 percentage points of car market share in March while the domestic Big 3 lost 3.26 points. European importers gained 0.05 points of car market share while Korean makers dropped 0.92 points.

March car sales — including captives — were off 1.62 percent at General Motors, 9.09 percent at Ford Motor Co. and 25.25 percent at Chrysler Corp.

Japanese manufacturers' penetration of the domestic car market increased from 24.19 percent in March 1989 to 28.32 percent in March 1990.

For the quarter, the Japanese share of the car market rose from 23.36 percent in 1989 to 25.85 percent this year.

During the first three months of 1990, GM was the only one of the Big 3 to gain car market share. GM's market share for the first quarter rose from 35.38 percent in 1989 to 36.53 percent this year. Ford's share dropped from 23.62 percent in the first quarter of 1989 to 22.10 percent this year. Chrysler's share fell from 10.57 percent last year to 9.28 percent this year.

CITROEN

FROM PAGE 1

The last Citroens officially sold in the United States were the DS and the Maserati-engined SM.

Citroen had hedged on a comeback due to the weak dollar and the professed fear by Peugeot S.A. Chairman Jacques Calvet that the U.S. luxury market would not accept a hatchback like the XM.

Another XM will be on the New York show stand of CXAuto, a small importer based in Middlesex, N.J., that has defied Citroen by modifying Citroen CX models in the Netherlands for export to the United States.

CxAuto, which has 15 dealers and reported sales of about 200 CX cars last year, projects its XM will go on sale in the United States Sept. 1.

Citroen disclaims any liability for those modified cars. It maintains it has had no authorized dealer network in this country since it quit the market.

Citroen said last week that imports for the United States will be solely through Citroen Cars Co. U.S.A.

The official XM destined for the United States will likely feature a four-speed automatic transmission, computer-controlled hydropneumatic suspension, anti-lock brakes, air conditioning with automatic climate control, leather upholstery, cruise control and metallic paint.

Introduction of the XM represented a major thrust into the European luxury segment for Citroen. It plans to produce 98,000 XMs this year, the car's first full year on the market.

European XM sales during the first two months of 1990 totaled 16,520, including 9,609 in France.

Citroen, which was acquired by Peugeot S.A. in 1978, has steadily improved its European market share in recent years.

It achieved a net profit in 1986 after a long stretch in the red.

Its worldwide production last year was 905,118 units, an increase of 12.7 percent over 1988.

The total consisted of 773,423 passenger cars and 131,695 commercial vehicles.

Citroen held 4.3 percent of the Western European car market in 1986 with sales of about 500,000 units.

Its 1989 volume was 644,000 for a 4.8 percent share of an overall car market that grew 15 percent during the three-year period.

Citroen did that without representation in Europe's vast subcompact market headed by the Volkswagen Golf.

That will be remedied later this year with introduction of the FX model that will fit between the AX supermini and the BX compact and give Citroen entries in four distinct segments.

Combined with Automobiles Peugeot's 7.9 percent Western European share, the Peugeot group ranked third in car sales last year behind the Volkswagen and Fiat groups.

Citroen has remained a somewhat acquired taste in Europe over the years, with idiosyncratic styling — but a solid reputation for suspension engineering.

Citroen has plants in Aulnay and Rennes-la-Janais, France, and Vigo, Spain.

It also still produces the ancient 2CV at a plant in Mangualde, Portugal.

YEN

FROM PAGE 3

financial reports in July might show a higher gain in profit, particularly for a company like Honda Motor Corp., which is doing a major portion of its business overseas. But the short-term gains would be based on materials already purchased at lower rates.

By the end of the year, the higher cost of raw materials could be expected to show up in lower profits, according to analysts.

The yen has fallen from about 145 to the dollar at the beginning of the year to about 160 last week. One year ago, the rate was about 130 yen to the dollar.

The lower yen also makes it more costly to sell imported vehicles in Japan. Virtually all importers of European makes have raised prices, largely due to the steep drop of the yen against European currencies.

So far, the yen's drop against the dollar has not forced any importer of American cars to follow suit.

J.E. Steinhagen, director of North American sales at General Motors Overseas Corp., said there is no need of change so far. He said there has been no sales slowdown, and GM still expects to reach its target of 9,000 units in Japan this year.

But Yanase & Co., the major importer of GM cars, raised interest rates on car loans from 7 to 8.5 percent because of higher interest rates in Japan.

House bill addresses transplant taxes

Several key House Democrats have introduced a bill to aid in the collection of taxes paid by U.S.-based subsidiaries of foreign-owned companies.

The bill was designed to ensure foreign companies pay their "fair share" of taxes, said Sens. Dan Rostenkowski, D-Ill., and Richard Gephardt, D-Mo.

They cited an Internal Revenue Service study that said in 1986 foreign automakers only paid $12 million in U.S. taxes on $7.7 billion in gross receipts.

April 17 — Aptco Auto Auction, Taylor, Mich.; and South Seattle Auto Auction, Kent, Wash.

VOLVO

FROM PAGE 2

extra pay, Austin said.

"This is not a punitive exercise. We are just trying to put our resources to work where they will do the most good," he said.

Austin said employees at corporate headquarters in Rockleigh, N.J., are not affected, unless they are involved with the field staff. But Volvo's other employees have been notified of the program and have been encouraged to make an extra effort, he said.

"We would be a lot closer to our target if we could make just one more sale per week per dealer," Austin said. Such an increase would yield more than 20,000 sales annually.

"By doing this (working overtime), we are showing dealers we think it can be done, and we're willing to work a little harder to do it," Austin said.

Michael Lazarus, co-owner of Volvoville USA in Massapequa, N.Y., Volvo's largest-volume U.S. dealership, said the program shows Volvo is committed. "I think it's a good thing, especially in a difficult market," he said.

Volvo has 413 dealers in the United States and 61 in Canada. Canadian sales for January-February were down about 21 percent to 771 cars. Volvo Canada's three area offices are also included in the six-day week.

Volvo has eight regional offices in the United States.

The six-day schedule took effect in late March, said Michael Babos, manager of the Metro East area based in Paramus, N.J., which covers New York, New Jersey and part of Connecticut.

He said about 20 people in his office were affected.

"When we finished our meetings, there was no applause, exactly, but people understand what's going on, and they accept it. We've got to help our dealers go through some tough times," Babos said.

Spokesmen for BMW of North America Inc. and Mercedes-Benz of North America Inc. said their field staffs often work weekends, but there is no formal policy requiring a six-day week.

Makers pile more coal on incentive fire

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Several import car companies extended or announced new incentive programs last week, while General Motors, Ford Motor Co. and Chrysler Corp. revised their programs.

Chrysler, which stopped offering rebates on minivans Jan. 31, assured customers who buy a new 1990 minivan that they qualify for a rebate if one is offered again during the balance of the model year.

Ford initiated a program that pays $500 to first-time new-car buyers who finance selected 1989, 1990 and 1991 models through Ford Motor Credit Co. by May 31.

Nameplates involved are Ford Escort, Festiva, Mustang, Probe, Ranger and Tempo and Mercury Capri, Sable, Topaz and Tracer.

GM is offering retail incentives of $1,000 on 1989 Chevrolet Celebrity sedans and station wagons and 1990 Celebrity wagons through May 2. In lieu of the cash, customers may choose 6.9 financing for contracts up to 48 months and 10.9 percent on 60-month contracts.

Chevrolet also is paying dealers $2,000 to $4,000 for sales of 1989 Corvettes until May 2.

Hyundai Motor America is offering retail and dealer incentives. Factory-to-customer cash payments involve the following 1989 and 1990 models: Excel L, $500; Excel GL/GS, $750; and Excel GLS, $1,000. Dealer incentives on 1989 and 1990 models are: Excel GL/GS/GLS, $250; Sonata, $800; Sonata GLS, $1,000; and Sonata GLS V-6, $1,500. Also, Hyundai dealers earn $500 on each Sonata if they sell more than six.

American Isuzu Motors Inc. has a dealer incentive program that gives dealers the option of passing the money directly to the consumer. Dealers who choose the dealer incentive earn cash on 1989 and 1990 Troopers depending on the number they sell. If they sell up to 10 units, they earn $900 on each; 11 to 20 units, $1,100; and 21 or more, $1,400.

On Isuzu pickups, dealers get $800 per sale up to 10; $1,000 for 11 to 20, and $1,300 for 21 or more. Dealers also get an additional $200 on four-wheel-drive pickups regardless of the number of units sold.

In lieu of that program, dealers may pass savings directly to the customer. In that case, customers will receive $1,200 on Troopers and $1,000 on pickups. The program expires June 30.

Mazda Motors of America Inc. is offering retail incentives on some 1990 models. Customers who buy the 1990 Mazda 323 hatchback by June 4 receive $750. Also, Mazda is offering $750 on 1990 2wd trucks and $1,000 on 1990 4wd trucks. The truck rebates run indefinitely.

Sterling Motor Cars extended its $5,000 retail cash rebate until April 30.

Payments to dealers in Suzuki of America Automotive Corp.'s incentive program are: 1988 and 1989 Samurai, $1,000; 1989 Swift GT with manual transmission, $1,000; 1989 Swift GT with automatic transmission, $2,000; 1989 Swift GLX five-door, $1,000; 1989 Sidekick JA softtop, $500; 1989 Sidekick JX softtop, $1,500; 1989 Sidekick JLX softtop, $1,500; 1989 Sidekick JX hardtop, $2,500; 1989 Sidekick JLX hardtop, $2,500; 1990 Swift GA three-door, $400; 1990 Swift GL three-door, $400; 1990 Sidekick JS softtop, 2wd, $1,000; and 1990 Sidekick, all 4wd models except CAMI special edition, $700.

Additional Suzuki dealer cash include 1990 CAMI special edition Sidekick JX softtop, $700; 1990 CAMI special edition Sidekick JLX softtop, $700; and 1990 CAMI special edition Sidekick JX hardtop, $1,500. The Suzuki program expires June 4.

OBITUARIES

Oscar Walter Mezey

MIAMI — Oscar Walter Mezey, who founded what is now Mezey-Puroll Automotive, a manufacturer's representative group, died March 5. He was 89.

A long-time Detroit-area resident, Mr. Mezey was a General Motors executive until 1945, when he founded Mezey-Puroll. He served as company chairman until he retired in 1978.

Howard A. Wilson

JACKSON, Miss. — Howard A. Wilson, a 1990 Time Magazine Quality Dealer of the Year award nominee, died March 18. He was 63.

Wilson was chairman of Howard Wilson Chrysler-Plymouth in Jackson, Miss. The dealership was the New Orleans Zone's top Chrysler-Plymouth dealership in 1988.

PRODUCTION

Car output 22% below '89 quarter

By Karen Detkowski
AUTOMOTIVE NEWS STATISTICIAN

U.S. automakers built 1,474,314 cars in the first quarter of this year, down 9.76 percent from last year's fourth-quarter total and down 22.38 percent from the year-ago first quarter.

March car assembly of 620,479 was 24.81 percent above February but 4.86 percent below the year-ago month.

Companies scheduled more overtime and less downtime in March in an effort to bring the first-quarter total up to par.

Scheduled auto output last week totaled 108,445, 20.22 percent below the prior week and 31.80 percent below the year-ago week.

Truck output of 735,824 for the first quarter was 19.34 percent below last year's fourth quarter and 36.48 percent below 1989's first quarter, which was the highest first quarter ever.

In March, truck production totaled 393,558, 23.85 percent above the previous month but 0.62 percent below the year-ago month.

Last week's targeted truck output of 81,347 was 10.28 percent below the prior week and 12.22 percent below the year-ago week.

Companies shared last week's scheduled car production as follows: General Motors, 51.12 percent; Ford Motor Co., 24.92 percent; Chrysler Corp., 2.12 percent; Honda of America Manufacturing Inc., 7.15 percent; Toyota Motor Manufacturing U.S.A. Inc., 4.06 percent; Mazda Motor Manufacturing (USA) Corp., 4.01 percent; Diamond-Star Motors Corp., 2.63 percent; New United Motor Manufacturing Inc., 2.12 percent; Nissan Motor Manufacturing Corp. U.S.A., 1.46 percent; and Subaru-Isuzu Automotive Inc., 0.41 percent.

GM scheduled overtime last Saturday at the Lansing, Mich., A-line and Friday overtime at the Janesville, Wis., plant.

Ford scheduled Saturday overtime last week at the Wixom, Mich., Lincoln plant. Saturday overtime was also scheduled at the Louisville, Ky., truck facility.

Ford's Mustang plant in Dearborn, Mich., remains closed this week due to a lack of dealer orders. It is expected to resume output April 17.

Chrysler will resume output today at the Belvidere, Ill.; Newark, Del.; Toledo, Ohio; and Sterling Heights, Mich., facilities.

Canada quarter also trails '89

Canadian automakers built 248,736 units in the first quarter this year, 11.39 percent below last year's fourth quarter and 1.62 percent below last year's first quarter.

Last month's car output totaled 104,836, 22.41 percent above February and 18.22 percent above the year-ago month.

Truckmakers built 227,239 units in the first quarter of the year, 2.41 percent above last year's fourth quarter but 12.74 percent below last year's first quarter.

GM to pay dealers 5% on carryover sales

By Michelle Krebs
and Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTERS

DETROIT — General Motors will offer dealers a novel twist to its traditional 5 percent carryover allowance on vehicles left in inventory when the 1991 model year begins. It will pay dealers 5 percent of sticker price when the vehicle is sold.

The new program is limited to 1990 models delivered to customers after the start of the 1991 model year through Dec. 31, said Robert Ogden, general director of sales operations and dealer relations on GM's customer sales and service staff.

Dealers also may have the option of surrendering all or part of the 5 percent payment to participate in an end-of-model-year promotion. GM has yet to decide if it will offer such a program.

Since the 1950s, GM has paid dealers 5 percent of sticker for all cars left in stock when the new model year begins. In recent years, because of high inventories, GM has held promotions to clear vehicles from dealers' lots.

Dealers have had to give up part or all of the carryover allowance to participate in those campaigns.

As part of last year's promotion, for example, GM gave dealers percentage amounts of the carryover allowance based on sales targets set for them by the automaker.

Ray Green, president of the National Automobile Dealers Association, whose dealerships include two Chevrolet stores, called the new program a compromise by GM and said it is a sign that GM is listening to its dealers.

He said NADA's position is that the automakers should reinstate the carryover allowance.

"The only difference I can see between the traditional carryover program and this one is when the dealers are paid," he said.

Under the former system, dealers were paid in one lump sum for their carryover inventory shortly after new models were announced. But under the new program, dealers are paid when they sell a vehicle.

Green said he believes Ford Motor Co. and Chrysler Corp. will follow GM's lead. Ford and Chrysler also canceled the carryover allowance and substituted incentive programs.

He explained that in the past, manufacturers recognized that cars left over after new-model introduction had less value. Hence, the automakers gave dealers a 5 percent adjustment.

He said the new program enables

'89 pay slimmer for Big 3 execs; Petersen tops

By Charles M. Thomas, Michelle Krebs
and Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTERS

DETROIT — Salaries for most top executives of the Big 3 inched upward in 1989, but their total compensation dipped from 1988 in most cases, according to proxy statements mailed to shareholders last week.

Retired Ford Chairman Donald E. Petersen topped the Big 3 executives last year with total compensation of $6.5 million.

General Motors

Roger Smith

Total compensation for the top five General Motors executives in 1989 dropped from 1988, reflecting lower corporate earnings. Their salaries rose, but stock bonuses, which are tied to GM performance, declined slightly, according to the GM proxy statement.

GM's annual meeting is scheduled May 25 in Detroit.

Salaries were up as much as 15 percent while bonuses dropped by lesser proportions in most cases.

Compensation of top officers, 1989 vs. 1988:

- Roger B. Smith, $2.5 million and $3.7 million.
- Robert C. Stempel, $2.1 million and $1.9 million.
- Lloyd E. Reuss, $1.4 million and $1.5 million.
- F. Alan Smith, $1.5 million and $1.6 million.
- John F. Smith Jr., $1.1 million; not listed in 1988.

The top 59 officers of GM earned $15.4 million in salary in 1989. That compares with $14.9 million for the top 57 officers in 1988.

GM and Asia are sales stars

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Heavy incentives in the first quarter pushed General Motors' share of the car and light-truck market up nearly a percentage point over last year's first quarter.

Chevrolet's Geo line of Japanese-built and -engineered vehicles provided the biggest boost for GM, the only member of the Big 3 that didn't lose sales and market share to the Japanese in the quarter.

Led by big gains at Toyota, Honda and Mitsubishi, Asian automakers picked up three percentage points of car market share, to 28.48 percent, and 1.72 points of combined car and truck market share.

Total U.S. car and light-truck sales in January through March were 3,462,930, down 0.83 percent from 3,492,147 in last year's first quarter. Light-truck sales rose by 5,010 units as domestic makers picked up 0.69 of a percentage point of market share.

For the quarter, Chevrolet was the nameplate leader in car sales for the first time since the second quarter of 1987, although Ford Motor Co. continued to lead in combined sales of cars and light trucks.

Lee McMillan, senior investment analyst with Marxman Management and Research in Northbrook, Ill., said Ford basically spent most of its incentive money in January while GM, "if anything, accelerated theirs."

Toyota, the No. 3 vehicle seller in the U.S. behind Chevrolet and Ford, continued to make inroads. Toyota's market share increased

UAW hungry to use GM's growth fund

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Five years ago, Whitey Hale was excited.

In the midst of plant closings and layoffs, Hale saw an opportunity for thousands of laid-off workers from his local union in Flint, Mich., to get back to work.

Not making cars, but making beverage containers in a joint venture with Dow Chemical Co.

Hale needed $30 million from a $100 million fund established by General Motors in 1984 for such projects. He never got the money. The workers didn't get the jobs.

Hale, president of UAW Local 326, is not a lone ranger. UAW officials say at least 30 other new-business proposals have been turned down by GM and that the automaker has not relinquished one penny of the promised $100 million in the Growth & Opportunity Fund.

"This will be an issue in 1990," says Cal Rapson, administrative assistant to Stephen Yokich, director of the UAW-GM department. He was referring to this year's contract negotiations.

"This is supposed to be a joint progam, but GM always has the final say-so; we will make sure the criteria are clear this time."

Ford Motor Co. implemented a similar program called the New Business Development Group in the 1987 contract year, funded with $30 million. Chrysler Corp. does not have a program.

The intent is to encourage unions to suggest non-automotive business ideas to provide jobs in areas hit by plant closings and layoffs.

Both GM and Ford agreed that their funds were flexible and could go higher than the stated amounts, but so far GM has spent no fund money. Ford has used $500,000, for a nine-month project at an engine

Canada a 'Favorit' to get Skoda; U.S. sales eyed

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

PRAGUE, Czechoslovakia — Skoda, the Czechoslovakian carmaker, is likely to introduce its Favorit subcompact in Canada next year, and some time later hopes to begin U.S. sales with help from a Western partner.

Jindrich Nevrla, deputy director of Motokov, the Czech auto industry export agency, said sales through a U.S. dealer network is "very possible," provided production is increased.

Skoda is talking with several Western automakers. Sources here say Volkswagen AG has the inside track while others say General Motors and BMW AG are in the running. U.S. sales could begin in three or four years.

About a year ago Skoda introduced the Favorit, a Bertone-designed, Porsche-engineered subcompact.

Czech auto officials say a key element in any deal is at least doubling Skoda's capacity, which is just over 200,000 units annually.

"With the current production level, going to the United States is out of our reach because 120,000 cars stay at home," he said.

Nevrla said a partner would help the company meet U.S. safety and emission requirements: "We have the catalytic-converter-equipped version of the car which, from the emissions point of view, could be sold in the United States. But there are other things, like passive restraints. We made a study, and there were about 15 changes that would have to be made."

But some Motokov officials say any boost in output should be used to increase sales in existing Western European markets. "We are selling 16,000 to 17,000 cars in Britain, with 0.7 percent market share," Nevrla said. "If Lada can sell 25,000 to 30,000 there, why can't we?"

Moreover, the collapse of U.S. Yugo sales is a concern. "To be honest, the Yugo story is scaring me. It was a big success, then suddenly it was like a deflating balloon," he said.

As for Canada, enactment of stricter emission rules interrupted Skoda sales in 1985. At that time, about 50 dealers sold a rear-engined model.

"We weren't prepared," said Josef Hlavacek, Motokov's commercial director, who was assigned to Canada at that time.

Volvo: Link with Renault to cut costs

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Aiming to head off opposition to its pending alliance with Regie Nationale des Usines Renault, AB Volvo last week told stockholders the proposed partnership will slash operating costs and would have boosted last year's profits.

Volvo and Renault have agreed to a cross-ownership arrangement and technical and industrial cooperation on cars, trucks and buses.

In its 21-page prospectus, Volvo said the savings would be realized through economies of scale in research and development, component purchasing and marketing.

It said Volvo would save 800 million kronas (U.S. $131 million) annually within two to five years and two billion kronas (U.S. $328 million) a year within five to 10 years.

A Volvo spokesman said the two billion kronas would be divided almost equally between the company's truck/bus and passenger-car operations.

Volvo estimated that pre-tax profits last year would have amounted to 7.87 billion kronas (U.S. $1.29 billion) had the alliance been in effect, 19.2 percent higher than the actual pre-tax result of

A heavily disguised test mule of Mercedes-Benz's F100 minivan, right, spied during testing with a Pontiac Trans Sport. Sides and rear of mule are from a Renault Espace minivan, but front end is altered slightly to accept variety of Mercedes engines. Four-wheel-drive prototypes have been tested.

Mercedes minivan cruises toward '93 debut

By Walter Hoenscheidt
SPECIAL CORRESPONDENT

STUTTGART, West Germany — The new Mercedes-Benz minivan, currently being tested in highly disguised form, is expected to premiere at the 1993 Geneva auto show.

The vehicle is described by company insiders as a pre-development project, but most Stuttgart sources expect full development.

It is known internally as the F100 and as *Grossraumlimousine*.

The European minivan market has largely been the preserve of the Renault Espace. Until now, its only competitors have been a handful of imports from Japan and Chrysler Corp., but all other major automakers are known to be working on challengers, including Mercedes and BMW.

The Mercedes vehicle, photographed during winter testing alongside a Pontiac Trans Sport, was heavily disguised to look like an Espace. Underneath, it is all Mercedes.

The German company plans to make its minivan different in several major respects from other models on the market.

Based on a lengthened W124-series chassis, the pre-tests have been run with several existing engines ranging from the 2.3-liter four-cylinder to the 3-liter six-cylinder. The 5-liter V-8 is scheduled to power top versions.

Rear-wheel-drive and four-wheel-drive versions are planned.

Mercedes wants the minivan's driveability, including top speed and ride, to be superior to all others. Depending on the engine, top speed will be 115 mph to 145 mph.

The gearshift will be near the steering wheel, leaving space around the front seats.

According to *Bunte* magazine, Mercedes minivan prices will start at 60,000 German marks, about $36,000.

Iacocca show plays to big crowds, gets mixed review

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

In a world where timing is everything, Chrysler Corp. Chairman Lee Iacocca has had a knack for being the right man at the right time.

In the late 1970s, Iacocca managed to convince an unsympathetic Congress to provide a $1.2 billion bailout for the faltering No. 3 automaker. In the early 1980s, he went on a tour to unveil the prototype of what is now Chrysler's highly successful minivan.

Times are tough again at Chrysler. The company is saddled with a fourth-quarter loss of $664 million, declining market share and a reputation for producing some cars with boxy styling.

So in an effort to polish Chrysler's image and spread the word that its cars are comparable in quality to Japanese models, Iacocca has taken his show on the road once more.

With more than a dozen moving vans filled with new production and concept Chrysler vehicles in tow, Iacocca is leading "Chrysler in the '90s" a six-city tour that began in Washington D.C. on Feb. 21 and ends May 18 in Los Angeles.

Two stops remain for Lee Iacocca's road show: Chicago, Los Angeles.

After Washington, the revue rolled into Dallas (March 8), Atlanta (March 21) and New York (March 28). It is scheduled to hit Chicago on April 25.

Admirers and the curious have turned out in full force. During the day-long events, Iacocca plays host to 1,500 to 2,000 invited guests in-

Toyota exec points to new products in rebuttal to Iacocca tongue-lashing

By David Versical
NATIONAL EDITOR

NEW YORK — Like ball players who dismiss sharp-tongued opponents by pointing to the scoreboard, two import executives took shots at Lee Iacocca and his cross-country crusade last week.

"If Chrysler really wants to be competitive," advised Robert McCurry, executive vice president of Toyota Motor Sales U.S.A. Inc., "they should stop complaining and redirect profits into new product."

McCurry, speaking at the New York auto show preview, boasted that Toyota has introduced seven new products in the last year — the four-door 4Runner, two Lexus models, Celica, Previa, MR2 and Land Cruiser.

"At Chrysler, they call that kind of new-product pace 'economic aggression,' " McCurry said. "At Toyota, we call it taking care of our customers."

Those new products have helped Toyota boost its car and truck sales by 7.66 percent in the first quarter, while Chrysler's are down 7.39 percent, so Iacocca's campaign has not hurt Toyota, McCurry said.

Even tiny Isuzu Motors, which sells about one vehicle for every dozen sold by Chrysler, took a shot.

"There's a guy who's going around the country saying, 'If you can find a better car, buy it,' " said Jack Reilly, senior vice president and general manager of American Isuzu Motors. "Apparently they are buying a lot of ours and not his." Isuzu's car and truck sales were up 4 percent in the first quarter.

McCurry, a former Chrysler executive, said he decided to speak up because Iacocca has been "stretching the truth" in his ads and public appearances.

COMMENT

Lee is right; buyers choose transplants over U.S. sisters

BY WILLIAM R. DIEM

William R. Diem is assistant managing editor of Automotive News.

Lee Iacocca could be right when he rages at his executives in a current Chrysler television commercial.

He charges that Americans favor Japanese brands over American brands, even when they come off the same American assembly line.

In three out of four cases, Americans do. In 1989, four sets of vehicles largely built in North America were sold under Japanese and American nameplates. Japanese versions outsold their American counterparts in three cases, and Ford Probe outsold Mazda MX-6 in the fourth.

In all cases, sales per dealership were considerably higher for Japanese brands, which have smaller networks.

Sales results show how buyers back up their perceptions with their money. But are Japanese cars better, too?

No.

They are essentially the same vehicles, built on the same assembly lines by the same workers. They ought to score the same on buyer perception of quality, but they don't. The American versions tend to score better.

J.D. Power and Associates has data about a year old on three of the four sets of cars. Mitsubishi Eclipse-Eagle Talon-Plymouth Laser wasn't on the market yet. Toyota Corollas and Chevrolet Novas and Geo Prizms from New United Motor Manufacturing Inc. were judged about equal.

For the Probe/MX-6 and Geo Tracker/Suzuki Sidekick, purchasers of the Japanese brands reported about 10 percent more problems per 100 cars than buyers of domestic brands, said Power analyst Dave Whiteside. At least one model involved in this article scored below average, so J.D. Power's policy on non-disclosure in that case prevented Whiteside from revealing actual scores.

Why would nearly identical cars score so differently? Power's data were not detailed enough to say, but there are these possibilities.

- Different materials in instrument panels, for instance, could contribute to squeaks and rattles. In both sets of cars where the Japanese were rated worse, squeaks and rattles were a big contributor.
- Dealer preparation at the domestic dealerships could be better.
- Differences in the distribution system between factory and dealer could cause initial quality defects observed by customers.
- Different expectations could contribute. Customers seeking perfection from a Japanese company might more readily complain of a squeak than a domestic customer who has accepted squeaky cars in the past.

For more modern diseases, scientists discover complex causes. A little bad diet, a little weak gene and a little dirty air can combine to kill a man's heart. Sales scientists need to study more before they can explain why American buyers rate the American version of a car higher, and then don't buy it. They will need to look at advertising budgets, manufacturer rebates, corporate personality and dealer attitudes. Some obscure combination of tiny factors is no doubt at work.

Meanwhile, car companies can rail at the phenomenon, as Iacocca and Chrysler are doing. They can shrug and try to take advantage of it, as Geo is doing. ("In the '70s, it was Toyota. In the '80s, Honda. For the '90s, get to know Geo," say the ads, as if Geo were a new Rising Sun company and not a Chevrolet marketing idea for cars from three sources.)

But without knowing why it happens, we can agree that it does happen.

When the step-sisters leave the transplant and go to the sales dance, buyers flock around Kimiko; Karen is the wallflower.

LETTERBOX

No quality gap

The article "Iacocca must lead" (Comment, April 9) was both intriguing and frustrating.

The analysis of Lee Iacocca's nationwide tour and Chrysler's advertising was thought-provoking. The comments about quality were very frustrating and seemed to conflict with your Page 3 article in the same issue headlined, "Mercedes, Buick, Toyota rated most dependable of '85 cars."

The Comment article said, "All the initial quality surveys show that on average, Japanese cars break less than American cars. General Motors executives even admit that they made junk in the mid-1980s."

I don't recall reading any such public admission by any GM executives. If they had, it would appear that the recent J.D. Power survey would have proven them wrong.

Your Page 3 article pointed out that Buick ranked highest in domestic brand dependability for 1985, and GM was the highest-ranking domestic manufacturer.

The initial quality surveys mentioned in the Comment article are now showing that the Japanese initial quality lead is a mere 0.5 of a defect. Let's face it, the typical consumer and those of us who deal with them every day on the retail firing line have great difficulty defining one-half of a defect.

Since the writer seems to enjoy anecdotal evidence, like the "friend's flaw-filled Oldsmobile" compared to a test drive in a Mercury Cougar, may I offer some of my own. A customer of ours, a Buick owner, said in effect, "I think this Iacocca guy is right. Those Japanese cars aren't really so darn good. I've owned GM products for 20 years, and I've been real happy with them."

The fact is, there is no longer a significant difference in quality between the major international automobile manufacturers. Typically, public perception lags behind reality. About a year from now, the popular press will finally figure out that the quality difference between domestic and imported automobiles is slim to none.

Soon we will see all kinds of "informative" stories with titles like: "American auto industry whips quality problems;" "GM back on top in quality;" "Auto quality gap narrows dramatically."

The quality battles of the early 1990s will be fought more in the marketing and public relations arena than in engineering or manufacturing. By 1995, the public perception of quality will be about the same as it is for fuel economy today, "standard equipment," worldwide.

Nightmare in the making

If the car market must absorb a $7.5 billion price increase for an absurd 1 percent *claimed* gain in air quality, then clearly our government has lost its sanity.

The skyrocketing prices of cars increase the use of old, high-pollution cars. And since the forthcoming fleet of old cars are nightmares to fix properly, the auto-related air pollution problem will be with us for a long time — thanks to our misguided government.

Robert Brooks
Waukegan, Ill.

IACOCCA

FROM PAGE 3

cluding political and community leaders, financiers and dealers.

Among those who have heard Iacocca's message are Jerry R. Curry, National Highway Traffic Safety Administration administrator; H. Ross Perot, founder of Electronic Data Systems Corp., now owned by General Motors; actors Tony Randall and Anthony Quinn; civil rights activist Coretta Scott King.

While Iacocca's presentation varies somewhat depending on the area and audience, the message has been the same: He's sick and tired of America's misconceived notion that Japanese vehicles are better than the home-grown variety.

It's hard to tell if Iacocca's buy-American message and his hard-hitting persona will have a lasting effect politically, said David E. Cole, director of the Office for the Study of Automobile Transportation at the University of Michigan Transporation Research Institute.

But he believes Iaccoca's timing is "unusually good" because it coincides with a growing sensitivity to Japanese ownership of American assets. He cited the acquistion of Rockerfeller Center by Mitsubishi as an example.

"There is a general concern that we may be financing the purchase of our own assests by a foreign country," Cole said.

Ken Makovsky, president of Makovsky & Co., a New York public relations firm, agrees. "It is a very clever strategy on Iacocca's part," he said. "What he's doing is hitting them in their nationalist pockets."

Still, not everyone has been impressed by Iacocca's roadshow. He's been taken to task in several newspapers, accused of touting American quality on one hand while selling cars made by Mitsubishi, on the other.

"Despite Iacocca's remarks, Chrysler has a Japanese partner, Mitsubishi Corp., on which Chrysler relies not only for cars, but also for engines," wrote the *Chicago Tribune* after he kicked off the tour in Washington D.C.

That same day, Iacocca made the front page in his hometown newspaper, the *Detroit Free Press*. "... while (Iacocca) was preaching that an inaccurate perception of inferior quality is the problem for U.S. automakers, the reality was a few feet away in the form of an Eagle Talon/Plymouth Laser. The model is designed by Chrysler's Japanese partner, Mitsubishi and built in a Mitsubishi-run plant".

Iacocca's harshest criticism has come from newspaper columnists.

Bob Garfield, an editor-at-large at *Advertising Age*, a sister trade publication to *Automotive News* wrote: "Shopping for a car? You'd better buy American or Lee Iacocca will rip your throat out. The man's ticked."

A *Los Angeles Times* column by Dale D. Buss, under its "Viewpoints" page carried the headline "The Teflon Iacocca" followed by the sub-headline, "Chrysler's chairman is renewing his Tokyo-bashing, but the fact remains that his company still can't adequately compete with the Japanese." The article was accompanied by a sketch of a cracked bust of Iacocca with several chunks missing.

Chrysler spokesman Tom Houston said the company knew from the outset that Iacocca would "play to what amounts to mixed reviews." But the campaign is serving its intended purpose.

"We think it raised (the public's) awareness of Chrysler Corp. and raised the awareness of a good

Iacocca gives away a third of his Chrysler shares

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Chrysler Corp. Chairman Lee Iacocca owns 95,339 fewer shares of the company's stock today than he did a year ago.

Iacocca owned 191,866 shares of Chrysler stock as of March 15, 1990, compared to 287,205 shares one year earlier, according to the company's proxy statement.

Earlier this month, Iacocca encouraged nearly 100 top company managers to buy Chrysler stock and take a personal stake in the company's performance.

A Chrysler spokesman said Iacocca sold no Chrysler shares in 1989 "but did dispose of some shares by gift."

According to the proxy, Iacocca will receive an additional 191,250 shares of common stock Nov. 2, 1990, and 63,750 shares Dec. 8, 1991.

He also has options to purchase 540,000 shares by Dec. 8, 1990 and 180,000 shares by Dec. 8, 1991 at $33.50 per share. Chrysler common stock closed at $16.88 last Thursday.

According to the proxy, Vice Chairman Gerald Greenwald owned 47,649 shares as of March 15, 1990, compared to 43,372 shares one year earlier. Chrysler Motors Chairman Bennett Bidwell owned 23,913 shares, up from 21,002 last year. Chrysler Motors President Robert Lutz owned 7,058, compared to 4,434 a year ago. Chrysler Corp. Executive Vice President Robert S. Miller Jr. owned 31,066, up from 28,011 last year.

Iacocca's compensation in 1989 included $2,413,600 realized from stock options exercised. Bidwell was the only other executive to exercise warrants among the five highest-paid Chrysler officials.

COMPENSATION

FROM PAGE 1

proxy statement calls for GM directors to own at least 2,000 shares of GM stock.

Ford Motor Co.

Ford Motor Co.'s top five executives received $15.3 million in salaries, bonuses and profits from stock options exercised in 1989, down 33 percent from 1988, Ford's 1990 proxy statement said.

Top executives overall received higher salaries in 1989 than in 1988, but less in bonuses and other compensation.

Ford's 1989 earnings dipped 28 percent from the prior year.

Compensation of top officers, 1989 vs. 1988:

- Donald E. Petersen, $6.5 million and $10.5 million.
- Harold A. Poling, $2.9 million and $4.1 million.

Ford last year awarded supplemental compensation totaling $213.7 million to 5,286 executives.

- Philip E. Benton Jr., $2.1 million and $3.0 million.
- Allan D. Gilmour, $2.0 million and $1.7 million.
- Louis R. Ross, $1.7 million and $3.5 million.

Ford's annual meeting is May 10 in Detroit.

Chrysler Corp.

Chrysler Corp. Chairman Lee Iacocca's 1989 compensation totaled $3.98 million, up from $3.65 million in 1988 but far below his totals of $20.6 million in 1986 and $17.9 million in 1987.

Compensation of other top officers, 1989 vs. 1988:

- Gerald Greenwald, $1.1 million and $1.2 million.
- Bennett Bidwell, $1.1 million and $1.2 million.
- Robert Lutz, $951,436 and $972,381.
- Robert S. Miller Jr., $874,266 and $896,328.

Chrysler paid salaries and cash bonuses totaling $8,577,066 to its top 14 officers, the proxy said.

A shareholder proposal in the proxy statement would require each company director to hold at least 2,000 common or preferred Chrysler shares.

Chrysler's shareholder meeting is May 17 in Universal City, Calif.

IDLE FUND

FROM PAGE 1

plant in Brook Park, Ohio, that involved engine repair, says Ford spokesman Dick Routh.

Rapson says one proposal rejected by GM, to manufacture hood latches in Columbus, Ohio, will be put back on the table.

He says the union hopes to put two other proposals on the table soon. One involves making military vehicles in La Grange, Ill.; the other involves engine rebuilding in Lansing, Mich.

Yokich says the union rejected one GM idea because the union's primary goal is to provide high-paying jobs.

He says GM proposed a venture in Framingham, Mass., that would have paid $8 an hour to the workers, and "We said bullshit."

GM officials declined to be interviewed about the Growth & Opportunity Fund. GM spokesman John Maciarz acknoledged that the company has received proposals, but he would not disclose how many or what they entailed.

Whitey Hale thought he had a winner.

Employment at GM's Coldwater Road parts plant in Flint had dwindled from 8,900 in the late 1950s to 1,100 in the mid 1980s. The plant had adopted a team concept and reorganized itself into five

Hale says he was approached by officials from the UAW Human Resources Center in Flint and was told his local was an ideal candidate for a Growth & Opportunity grant to work with Dow on the bottle project.

"They came out here and got us all hyped up, but nobody got back to me and told me nothing," Hale says. "I was left in the dark on everything."

Dow spokesman Gordon Butte says Dow had technology that could be used to make plastic beverage containers. He says a panel of Dow executives made a presentation to a joint GM/UAW committee sometime in the 1980s about the possibility of workers in the Flint area manufacturing the parts.

Butte says Dow never heard from the committee.

The joint committees may need restructuring.

A union official who made a presentation to the GM/UAW committee, but who did not want to be identified, says he believes the committee members are sincere, but he says they have been afraid to take risks. "$100 million is an awful lot of money," he says. "This project needs to be successful, and because of that pressure to succeed, risks are hard to take."

actually held in special accounts, but the automakers agreed to make them available should proposals be approved by the joint committees that hear the ideas.

Growth & Opportunity was hailed as "yet another historic first," in a September 1984 UAW-GM newsletter. The article said that "the union and the corporation agreed that the success of this new joint activity will be measured based upon results."

Commitment is lacking, says the union official who chose to remain anonymous. He says the committee members are generally high-ranking UAW and GM officials who are busy doing other jobs. He says most of them either know little about or are uninterested in non-auto related businesses, the main attraction of the programs.

"Asking them to examine businesses that are wholly different from the automotive industry is asking a lot," he says. "This program has great potential, but there is a real problem in the way it's set up."

GM, Ford and the UAW would disclose the number of committee members or their identities.

Ford's Routh says he did not have any details on the engine repair program. Jerry Melillo, president of UAW Local 1250, which represents the Brook Park plant,

Routh says a joint UAW/Ford committee meets from time to time but has not yet "come up with a brilliant, creative idea."

Orville Spencer, president of Subcouncil 2, which represents all Ford assembly plants, says the international union has given no directive to locals on the program.

Now union leaders are suggesting that $100 million be used in other ways to help union members. Hale suggests using it to raise retirees' pensions. If that amount were shared equally among GM's 310,000 hourly workers who earn $14.01 to $17.33 per hour, it would average about $300 per worker.

A former UAW vice president agrees with notion of finding another program.

"I'm a little surprised nothing has been done," says Irving Bluestone, former director of the UAW GM department, who retired in 1980.

Bluestone believes a one-time payment to workers would be a waste. He says the money could best be spent on a program that would have some lasting effect, such as the legal services programs that each of the Big 3 provides for hourly workers.

"Obviously, if none of the money has been spent and none is going to be spent, it's time to look at other

GM recalls 65,200 cars

General Motors is conducting two safety recalls involving certain 1988-90 compact cars. On nearly 62,000 1988-89 Pontiac Grand Am, Oldsmobile Cutlass Calais and Buick Skylark cars equipped with 2.3-liter Quad 4 engines, a front fuel feed hose assembly could crack or separate from the engine. Approximately 3,200 1990 Cutlass Calais and Skylark cars may have loose front fuel feed/return hoses. The conditions could result in underhood fires.

FORD RECALLS AEROSTARS: Ford Motor Co. is recalling 101,000 1986 Aerostar minivans to replace a seal between the fuel tank and fuel filler pipe. The company said gasoline may leak from the seal when the tank is full or nearly full. Ford said it has not received any reports of fires due to the fuel leak.

CHRYSLER RECALL: Chrysler Corp. is recalling some 1989 and 1990 vehicles equipped with the company's A604 four-speed electronic transmission. The company will install a new bypass valve to prevent possible transmission damage in extremely cold weather resulting from restricted flow of transmission fluid through the oil cooler. Only vehicle owners in northern states are being notified. Affected vehicles include: 1989 Dodge Caravan, Dodge Grand Caravan, Plymouth Voyager and Plymouth Grand Voyager without the heavy-duty trailer tow package; 1990 Dodge Caravan, Dodge Grand Caravan, Plymouth Voyager, Plymouth Grand Voyager and Chrysler Town & Country with heavy-duty trailer tow package; and 1989 and 1990 C-body and Y-body sedans including New Yorker Landau, New Yorker Salon, Dodge Dynasty, Fifth Avenue and Imperial.

DIGEST

AUDI RECALL: Volkswagen of America Inc. is recalling about 1,600 1990 Audi 80, 90 and Coupe Quattro models for replacement of the steering lock assembly. The company said some of these vehicles may have an improperly manufactured steering locking bolt that could cause the steering wheel to remain locked even after the driver starts the car. Separately, owners of about 100 1990 Audi Coupe Quattros are being notified of the need for an inspection to make sure that front seat securing fasteners are properly installed.

TOYOTA ADS CLAIM AMERICAN CITIZENSHIP: Toyota Motor Corporate Services of North America Inc. has hired OMON, a tiny New York ad agency, to promote the company's image as an American corporate citizen. "We've been here since 1957," said Tim Andrea, manager of public relations for Toyota Motor Corporate Services, "and we employ roughly 75,000 people in the various Toyota subsidiaries." That makes Toyota feels like a naturalized citizen, he said. The print ad campaign will begin later in the spring, Andrea said, and is not a reaction to Japan bashing or criticism from Chrysler Corp. Chairman Lee Iacocca.

LEAR SIEGLER PLANT CLOSING: Lear Siegler Seating Corp. will close its Chesterfield, Mo., plant July 27 as a result of Chrysler Corp.'s decision to close its St. Louis No. 1 assembly plant in Fenton, Mo.

GM'S 100-MILLIONTH CATALYTIC CONVERTER: GM President Robert C. Stempel celebrated the production of the 100-millionth catalytic converter at a ceremony last Thursday at the GM research laboratory in Warren, Mich. "AC Rochester engineers estimate that catalytic converters the division has built have cleaned automotive exhaust streams of 30 million tons of hydrocarbons, 150 million tons of carbon monoxide and 10 million tons of oxides of nitrogen," said Stempel. He added that the Eastern Bloc countries would soon be switching to unleaded gasoline and catalysts to provide clean-up. He said this would likely add significantly to GM's catalyst business.

EPA CONTRACT FOR FEV OF AMERICA: FEV of America, an independent design and development firm in Southfield, Mich., specializing in internal combustion engines, has been awarded an EPA contract to develop a spark-ignited, direct-injection methanol-powered passenger-car engine. The purpose of the contract is to develop and evaluate an engine that will perform well on 100 percent methanol without additives or chemical changes. VW will provide the prototype direct-injection engine.

NISSAN FINANCE RESTRUCTURES: Nissan North America Inc. is restructuring its consumer finance division to make it more responsive to dealers, according to Nissan. Nissan Motor Acceptance Corp., the eight-year-old finance company, will replace its 20 individual processing centers with 11 regional offices reporting to a single clearinghouse in Dallas. The regional offices of the finance arm will be part of the 11 regional offices of the distribution and sales wings of Nissan Motor Corp. in U.S.A. A letter to Nissan's 1,110 dealers from Masataka Matsumura, Nissan Motor Acceptance president, said the new operation will ensure quicker, more uniform treatment of loan applications.

Car inventories steady; 68-day supply on hand

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Domestic automakers and importers entered the spring selling season cautiously, keeping car inventories in check.

Combined April 1 inventories of domestic and imported new cars rose 1.71 percent from the March 1 total and were well below the record stockpile on April 1, 1989. Sales in the first quarter of 1990 were off 3.0 percent from 1988.

Stocks of new domestic and imported cars on April 1 totaled 2,147,553 units, a 68-day supply. That compares with 2,111,436 for a 67-day supply on March 1.

This year's stocks are in sharp contrast to a year ago when unsold cars totaled a record 2,536,007. That was a 77-day supply.

The April 1 days' supply averaged 60 for 1983 through 1989.

Domestic new-car inventories represented a 64-day supply on April 1, down from 66 a month earlier. The stockpile was 1,478,891 cars, up from 1,466,579 in March.

General Motors' total car inventory, including captive imports, dipped to a 68-day supply on April 1 from 70 days on March 1. Ford Motor Co.'s total car inventory rose to a 67-day supply from 65. Chrysler Corp.'s total supply climbed to 77 days from 73.

The inventory of Dodge Monaco sedans soared to a 427-day supply from a 292-day supply a month earlier. Chrysler has closed the Bramalea, Ontario, assembly plant that builds the car for six weeks.

Other Chrysler models with 100-plus days' supplies are Eagle Premier; Chrysler LeBaron J, LeBaron GTS and Imperial; and Dodge Daytona and Lancer.

Despite customer rebates up to $2,000, GM continued to be plagued with heavy inventories of its GM10 models, the Chevrolet Lumina, Buick Regal, Oldsmobile Cutlass Supreme and Pontiac Grand Prix. Days' supplies range from 74 for Lumina to 119 for Regal.

Other GM models in heavy supply include Buick Reatta and Electra; Cadillac Allante; Oldsmobile Toronado and 98; and Pontiac Firebird. Stocks range from 93 to 126 days on those models.

The Probe, at 108, was the only Ford model with an inventory of more than 100 days.

Imports opened April with a 79-day supply of unsold new cars, down from 80 a month earlier.

The import stockpile rose to 668,662 from 644,857 on March 1.

The April 1 supply of unsold Toyotas, U.S.-built and imported combined, dropped to 50 days from 62 on March 1.

Similarly, Mitsubishi's inventory dipped to a 63-day supply from an 80-day supply a month ago. Mazda's inventory fell to a 50-day supply from 68.

Honda inventory rose to 46 days' worth of U.S.-built and imported cars, up from 43 on March 1.

Inventories of Nissan cars, U.S.-built and imported, fell to 102 days from 112 on March 1.

The stockpile of U.S.-built Subaru Legacy models was 440 days on April 1. Subaru's overall inventory of U.S.-produced and imported cars represented a 116-day supply.

Subaru of America Inc. spokesman Fred Heiler says the domestic Legacy glut is a one-time start-up situation and includes not-yet-delivered fleet units.

VOLVO

FROM PAGE 3

6.6 billion kronas (U.S. $1.08 billion).

Volvo's board of directors is scheduled to vote on the proposed alliance at the annual meeting April 25 in Gothenburg.

There have been reports in Sweden of shareholder discontent with the deal. No major shareholder groups have come out in opposition, but the Swedish Shareholders Association, which represents a large block of small Volvo shareowners is polling 1,000 of its members about the proposed union. The survey results are expected to be announced tomorrow.

The 27 largest shareholders of AB Volvo hold 42 percent of the shares and 64 percent of the votes.

The agreement calls for Renault to acquire 25 percent of Volvo Car Corp. and to buy up to 10 percent of parent AB Volvo on the open market. Volvo would acquire 20 percent of Renault's parent company, which includes passenger-car operations, and an option to take the stake to 25 percent.

In addition, each company would acquire 45 percent of the other's truck and bus business.

The alliance would create one of the world's largest automotive concerns. Combined car and truck revenues last year for the two firms were $37.4 billion.

General Motors is the world's largest automotive company with 1989 revenue of $127 billion. Ford Motor Co. followed at $96 billion.

SALES

FROM PAGE 1

1.6 points to grab 7.12 percent of total market share.

Honda's sales increased 16.40 percent for the quarter, and its car market share jumped to 8.23 percent from 6.97 percent.

"Honda's not in the (incentive) game because its inventories are good," said Jeff Sprague, assistant analyst at Paine Webber in New York City. "But even BMW and Mercedes — God forbid, they won't call it an incentive, but they're offering favorable lease rates and other things."

European imports as a group continued their decline in the first quarter, with the notable exceptions of German luxury makers Mercedes-Benz, Porsche and Audi.Analysts warn that a quarter is a short period, and sales trends can change quickly. But they praised GM's marketing efforts.

"GM's incentives were basically the most aggressive," Sprague said. "For the consumer, everybody was on par, but GM gave dealers almost the same amount; that gives dealers a lot more flexibility."

Ford Division sold 684,101 cars and light trucks to maintain its lead in total vehicle sales for the quarter, although the division's combine car and light-truck sales sales dropped 6.19 percent. Chevrolet breathed down Ford's neck, only a half percentage point behind in combined car and light-truck share. In the year-ago quarter, Chevrolet lagged by more than three percentage points.

Ford Motor Co. saw total sales drop 6.25 percent and car and light-truck market share drop to 29.64, down from 30.24 a year ago.

Ford's bright spot was its luxury Lincoln division where sales soared 34.69 percent from a year ago. Most other luxury lines also picked up sales.

"The middle-class consumer is deciding that a $22,000 Cadillac is a much better value than a $17,000 Cutlass," says analyst McMillan.

Total U.S.-badged vehicle sales slid by 2.85 percent. Chrysler Corp., which had a big January spurred by rebates on its popular minivans, still dropped 7.42 percent in vehicle sales.

Asian nameplates increased total vehicle sales by 6.88 percent. Of the three leading Asian nameplates — Honda, Toyota and Nissan — only Nissan suffered a sales decline, down 11.13 percent.

Japanese light-truck makers lost almost 3/4 of a percentage point.

Here's how major manufacturers and importers did in the quarter:

General Motors

GM's share of the U.S. car market for the quarter amounted to 35.96, up 0.58 of a percentage point from the first quarter of 1989. Truck share rose to 34.96 percent, up 1.32 percentage points.

Sales increases were nearly across the board at Chevrolet. Only two car lines, Corsica/Beretta and Camaro, had lower sales.

Sales of the Geo Prizm tripled from sales of its predecessor, the Nova. Other Geo models doubled sales.

Cadillac continued its turnaround by capturing 3.01 percent of the U.S. car market during the period, up from 2.78 percent a year ago. Every Cadillac model but the Eldorado enjoyed a sales hike.

Oldsmobile sales, dismal in 1989, dropped 10.20 percent.

And the Pontiac division, the turnaround darling of the 1980s, saw sales plummet 11.35 percent.

Ford

Ford's sporty cars — Thunderbird, Probe and Mustang — did poorly while Ford's mid-size sedans and larger cars — the Tempo, Taurus, and LTD Crown Victoria — did well.

"Probe was out there by itself in the sporty specialty car market last year, but the Diamond-Star cars (Mitsubishi Eclipse, Plymouth Laser and Eagle Talon) were introduced in the meantime," said Joel Pitcoff, manager of research and analysis for Ford.

"Taurus and Sable have held their own in their segment despite a number of new product entries in the market," he added.

Escort was off 21,000 units in the first quarter of 1990 because of the changeover for the next generation Escort at Ford's Wayne, Mich., assembly plant, between November and February.

Ford's truck market share fell to 29.64 from 30.24 percent in the first quarter of 1989.

Pitcoff expects a similar second quarter.

Chrysler

Chrysler held its own in the truck market, but sales of Dodge and Chrysler brand cars dipped.

The company's 10.57 percent of the car market in the first three months of 1989 dipped to 9.14 percent in the first quarter of 1990.

Truck share held steady: 20.77 percent for the first quarter this year compared to 20.82 percent last year.

Biggest gainers were the sporty Laser coupe and Acclaim sedan.

Asian

In the first quarter, combined sales of Japanese and Korean imports and transplant cars and trucks (by marketing unit, not including Big 3 captive imports) were 824,045 up 6.88 percent from the year-ago period.

Mitsubishi Motor Sales of America Inc. was the segment's biggest mover, with total sales increasing 68.14 percent from the year-ago period to 57,449.

Toyota's new Lexus Division posted 13,167 sales in the first quarter.

Nissan's Infiniti Division sold 3,695 cars in the three-month period. Despite that, Nissan's total car sales fell 11.13 percent.

European

European imports fell 6.75 percent to 110,204. BMW fell 17.21 percent; Volvo, 11.81 percent.

Porsche sales jumped 30.64 percent in the quarter to 2,362. Porsche overhauled its product lineup for 1990 and held the line or even cut some prices.

The Audi of America Inc. unit of Volkswagen of America Inc. gained about 7 percent to 4,949. Sales of Volkswagen models declined nearly 2 percent to 29,155.

GM DEALERS

FROM PAGE 1

dealers to plan their buildout orders because they will know their actual cost of each carryover.

Green said the possibility of an optional incentive program is "the best of both worlds."

He said many dealers last year made more money by participating in the incentive program than they would have made with the 5 percent carryover allowance.

"And it's my understanding that GM spent more on incentives than if it would just have given the dealers 5 percent," he said.

Other dealers had mixed reaction to what is essentially an "incentive-based" carryover rebate.

Charles Barker, president of Colonial Auto Group, a Chevrolet-Cadillac dealership in Norfolk, Va., prefers the traditional system.

"Carryovers were always there, so dealers could manage inventories and plan for buildout at the end of the model year," he said. "Incentives tend to run out."

Joe Faulkner, president of Henry Faulkner Oldsmobile-Mitsubishi in Philadelphia, said he favors a sales promotion.

"I would rather take part in a promotion to sell cars than be paid to inventory them," he said.

Under the new program, dealers will be paid upon retail delivery of the vehicle between the first day of the 1991 model year and Dec. 31. But the incentive doesn't cover some of GM's low-priced Geo models and the Pontiac LeMans.

U.S. CAR & LIGHT TRUCK SHARES, FIRST QUARTER, 1990 vs. 1989

Mitsubishi adjusts spiffs

Mitsubishi Motor Sales of America announced new retail and dealer incentive programs which extend through June 30. Payments vary by region on some car and truck lines.

Customer incentives on 1989 and 1990 vehicles are: Galant, $1,000; Mirage, $500; Sigma, $2,000; pickup and Montero, $1,000.

Factory-to-dealer incentives are: 1989 and 1990 Galant, $500 to $2,000 depending on number sold; 1989 and 1990 Mirage, $500 after the third unit sold; 1989 and 1990 Eclipse, $500 to $750 depending on the number sold; 1989 and 1990 pickup and Montero, $500 to $1,500 depending on number sold.

GAS

FROM PAGE 6

efits of introducing this or other reformulated gasolines on a larger scale," Bowerman said. "That's because before all gasolines can be reformulated, more research is required, extensive capital investments must be planned and time is needed to design and build modifications to complex, billion-dollar refineries."

Phillips will begin marketing its fuel in the St. Louis area on Earth Day, April 22. The new fuel will be available at 125 stations.

The second reason for introducing the cleaner gasolines is to demonstrate that they can provide air-quality improvements similar to those of alternative fuels. If petroleum companies cannot prove reformulated gasoline's emissions cleanup potential, there is considerable political pressure to force alternative-fueled vehicles on the non-attainment areas. Those alternative fuels include methanol, ethanol, hydrogen, liquid petroleum gas and compressed natural gas.

Important to proving the cleanup potential of these reformulated fuels are research projects to identify and quantify reductions in automobile tailpipe and evaporative pollutants.

A week ago, Chrysler Corp., Ford Motor Co., General Motors and 14 petroleum companies began phase one of a four-year, joint research and testing program in which a wide range of gasoline reformulations will be evaluated.

The program will assess the relative reductions in vehicle emissions and improvements in air quality, particularly ozone, achievable with 23 different reformulated gasolines and blends of gasoline and methanol. The results are expected in September and will be made public. Phase two of the program will look at changes in the vehicles to complement the changes in the fuel.

"Methanol will be the fuel of the future," said Richard White, vice president of marketing for Marathon. "But reformulated gasoline will be the predecessor to alternative fuels like methanol."

White said Amaraclean, Marathon's reformulated gasoline that is available in regular, mid-grade and premium, is part of the "first generation" of environmentally cleaner gasolines.

The third reason for introducing these new fuels is the positive publicity attached to being an environmentally aware company. Few of the ads mention the small scale of the programs or what happens to the butane, aromatics or olefins "removed" from the fuel. An ARCO spokesman admitted that most of those hydrocarbons go back into the old-style gasolines marketed in other regions.

Gasoline refiners are able to boast in advertising about impressively high cleanup percentages provided by the fuel in the most highly polluting vehicles — pre-1975 models without catalysts. According to a speech by GM President Robert C. Stempel, "85 percent of the automotive pollution in the U.S. comes from the oldest 50 percent of the vehicles on the road."

But the actual emissions reduction in individual vehicles depends largely on the vehicle's age and the condition of its emission-control system.

The more sophisticated fuel-injection systems and evaporative and exhaust-system emissions control systems on the newest vehicles gobble up old-style gasoline without producing higher levels of emissions. Current reformulated gasolines have only a small effect on new-car emissions.

Spokesmen from the fuel companies say the reduction in range or mileage from the first-generation reformulated gasolines would probably be too small to notice. One Ford specialist estimated that if conventional gasoline provided a 300-mile range in a particular vehicle, today's reformulated fuels would provide close to 290 miles in the same vehicle.

The new formula for gasoline has not yet been defined. But generally, the recipe includes removing much of the butane, 20 to 30 percent of the normal levels of aromatics and olefins, 30 to 35 percent of the normal levels of benzene and the addition of methyl-tertiary-butyl-ether.

4-day week cuts build of cars, trucks

By Karen Detkowski
AUTOMOTIVE NEWS STATISTICIAN

Last week's targeted domestic car and truck production declined as all but one U.S. assembly plant closed for Good Friday.

Automakers scheduled output of 103,219 units, down 6.98 percent from the prior week's build as plants worked a four-day week. Car output was 35.69 percent below the year-ago week, which was a full work week.

So far this year, 1,685,903 cars have been built, 24.02 percent below 1989 at this point.

Companies shared last week's scheduled production as follows: General Motors, 41.57 percent; Ford Motor Co., 24.73 percent; Chrysler Corp., 11.96 percent; Honda of America Manufacturing Inc., 6.60 percent; Toyota Motor Manufacturing U.S.A. Inc., 4.26 percent; Mazda Motor Manufacturing (USA) Corp., 3.00 percent; Diamond-Star Motors Corp., 2.19 percent; New United Motor Manufacturing Inc., 3.97 percent; Nissan Motor Manufacturing Corp. U.S.A., 1.38 percent; and Subaru-Isuzu Automotive Inc., 0.34 percent.

Truck production was estimated at 69,624 units last week, 12.26 percent below the prior week and 21.95 percent below the year-ago week.

Year-to-date, truckmakers have assembled 1,105,483 units, 17.67 percent below last year's build.

Toyota's Georgetown, Ky., plant was the only U.S. car assembly facility that worked Good Friday.

All Big 3 plants will extend their Easter holiday until Tuesday.

GM's Oklahoma City plant reopened last week after a one-week shutdown for schedule adjustment.

Ford slated daily overtime last week at the Wayne, Mich., and Wixom, Mich., car plants.

Daily truck overtime was scheduled at Ford's St. Paul, Minn.; St. Louis; Kansas City, Mo.; Lorain, Ohio; and Louisville, Ky., plants.

Canada pinched by short week

Canadian assembly plants were closed Good Friday along with their U.S. counterparts.

The four-day week caused car and truck production to dip from the totals for the prior week and the year-ago week.

Last week's scheduled Canadian car production of 13,623 was 32.76 percent below the previous week and 39.13 percent below the year-ago week.

So far this year, 283,261 cars have been assembled, 4.64 percent below last year's total at this time.

Targeted Canadian truck assembly of 15,022 units last week was 24.73 percent below the previous week and 19.36 percent below the year-ago week.

To date, 1990 truck output is 262,316 units, 12.50 percent below the year-ago total.

Ford closed its Oakville, Ontario, plant last week because of a slowdown in dealer orders. The plant is expected to resume output tomorrow.

Ford-Marine Midland talk; dealers are key

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co.'s proposed acquisition of Marine Midland Automotive Financial Corp. could give the automaker unprecedented entry into competitive-make financing and add to its multi-faceted financial services status without a financial drain.

The deal, announced April 18, also would enable Ford to compete head-to-head with General Motors Acceptance Corp. and Chrysler Credit Corp. for GM and Chrysler dealers' business, as well as for import dealers' business.

But experts close to the deal say Ford could be walking a tightrope between its own dealer body and the companies that it could service under the former Marine Midland Automotive Financial Corp.

Marine Midland's auto arm already has contracts to provide private label financing services to Mazda, Saab, Sterling, Subaru and Jaguar dealers.

Ford plans to offer those Marine Midland clients service and rates comparable to those it offers to Ford and Lincoln-Mercury dealers.

"The trick for Ford will be for Ford Credit to make everyone that it serves happy — including competing manufacturers that it serves — and its customers," said Ronald Loshin, president Bank Lease Consultants in San Leandro, Calif.

Ford said it will emphasize its relationship with existing clients first and then contact other manufacturers' dealers on a "one-by-one" basis. Ford will file information with the Federal Trade Commission when an agreement is signed. A Ford attorney said the company anticipates no antitrust problems.

An agreement is expected in 30 days. The price was not disclosed.

Ford spokesman Jim Bright said Ford is interested only in acquiring the organization of Marine Midland Automotive Financial, including its 12 regional offices, equipment and 830-person staff. Not included is Marine Midland's $5 billion in automotive receivables. The $5 billion will stay with Marine Midland Bank.

The immediate impact on Ford's balance sheet is not known. Loshin said he expects Ford to install Ford

Being 'Earth friendly' is costly, dealers find

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Auto dealer Dick Strauss knows the kind of effort it takes to save the planet: He's just shelled out $27,000 for a machine that analyzes auto emissions, and he spends between $5,000 and $12,000 annually to have his dealership's toxic wastes hauled away.

Strauss, who owns Dick Strauss Ford-Isuzu-Suzuki in Richmond, Va., didn't march on Washington yesterday to mark the 20th anniversary of Earth Day. Yet he's proud of his contribution to a cleaner earth.

But at a time when dealers nationwide are scrapping to make a profit, Strauss and others are wrestling with how to cover the cost of complying with state and federal environmental regulations. And those requirements will become more stringent with th likely passage of a new clean air bill this year.

Strauss, who is not a big dealer, has hiked his labor charge by 3 to 4 percent to absorb the costs. At some point, he might have to list those charges on the bill so customers know why costs are up.

Strauss is not alone, says the National Automobile Dealers Association. A growing number of dealers are already passing on the cost of environmental equipment, said Douglas Greenhaus, a senior NADA attorney who specializes in regulation.

Manufacturers are also trying to demonstrate their environmental consciousness by forcing dealers to buy expensive equipment, such as stations that recycle chlorofluorcarbons used as air conditioning coolant. Those machines will not

BATTERY JOLT: *Isuzu cell shocks industry; 30-second recharge claimed*

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Isuzu Motors Ltd. has developed what it calls a "revolutionary" new type of battery, a new concept for storing energy, that is smaller and more powerful than existing batteries and can be recharged in 30 seconds.

Isuzu President Kazuo Tobiyama said the product will be on the market in two years, with models planned for both home and commercial use. It is still in the prototype stage.

Eventually, Isuzu said it can be a power source to run an electric car. But the first application will probably be for improved engine start ups in current vehicles.

Isuzu is 38.2 percent owned by General Motors Corp., which needs better battery technology before

Acid rain has dealers seeing spots

Ford to begin coating cars to protect paint, ward off claims

By Francis J. Gawronski and Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTERS

The colored spots bloom atop the hoods, trunks and roofs of new cars that sit in acid rain and other airborne pollution.

"The situation is unbearable," said a Detroit-area Ford dealer. "You don't need a microscope to see them; it's a costly problem."

The paint problem costs Ford Motor Co. an estimated $60 million a year in dealer damage and consumer warranty claims, and other automakers face the same problem.

To fight back, Ford will spray the hoods, trunks and roofs of most of its vehicles with a special solution before they leave the factories. Beginning next month, most Ford assembly plants will be equipped with the spraying equipment.

J.P. King, manager of Ford's Parts and Service Division, wrote dealers that the waterborne, water-soluble coating should help protect the paint from pollutants that cause the spotting, primarily during shipment and dealer inventory storage periods.

Dealers will be compensated for removing the coating.

"We expect to have new paint enamels which are more resistant to environmental fallout by next summer," said Lee Miskowski, general manager of Ford's parts and service division. "In the meantime, this new transit coating, which was extensively tested last summer, will go a long way toward improving customer and dealer satisfaction with our paints."

Miskowski did not give further details about the new paints.

Bob Mowers, manager of coating and testing at General Motors' Tech Center in Warren, Mich., said the problem generally occurs between late summer and early fall in heavily polluted areas. He said the pollutants, mixed with dew and humidity, sometimes grind into the new paint and slightly eat away at it. He said the newer clear-coat paints, which are shiny and smooth, highlight the spots.

He agrees with Ford that the "best solution is for the industry to come up with materials more resis-

World Congress, Detroit auto show set a week later

The 1991 Automotive News World Congress will be held Jan. 13-16, a week later than in 1990.

World Congress, which brings together nearly three dozen top speakers from the auto industry, will run in conjunction with the North American International Auto Show in Detroit.

That show will also be pushed back a week next year to allow more time after the holidays. Press days for the Detroit show will be Jan. 8-10, and the public can attend Jan. 12-20.

Robert Thibodeau, the show co-chairman, said major manufacturers asked show organizers to move the date to allow more preparation time for displays. Thibodeau owns Bob Thibodeau Ford in Center Line, Mich. He said more international journalists will be able to attend the later show, organized by the Detroit Auto Dealers Association.

overcapacity pains
, while closing two U.S. assembly plants this year, is considering ductions in manufacturing capacity. Story on Page 3.

VW, Mazda work on van deal, may include a mini for Europe

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Volkswagen AG and Mazda Motor Corp. are discussing possible joint European marketing of the new VW T4 van, and the two companies also may be interested in shared production and sales of a Mazda-designed minivan.

Mazda sources in Europe confirm talks are under way, though both sides deny a report that an agreement is held up only by opposition from German VW dealers.

The overdue T4 van will be introduced in late August and will go on sale late this year, according to a Volkswagen spokesman. It will replace the aging Transporter/Caravelle, sold in the United States as the Vanagon.

Sources say there are no agreements between Mazda and VW, only discussions. But according to German dealer publication *KFZ Betrieb*, a firm deal was snagged by objections from German dealers to giving Mazda's European retailers a version of the VW van.

The journal reported an agreement was due to be signed at the Geneva auto show, but joint marketing of the T4 proved to be a stumbling block. It said VW dealers are angry because the deal would diminish their T4 sales.

Under the reported agreement, VW dealers would sell the new van exclusively for two years after its debut. A Mazda-badged, VW-produced version would then be sold in Europe. Mazda would cease importing its E2000 van.

In turn, the journal said, Volkswagen would produce and sell its own version of a new Mazda minivan to compete in what is expected to become an important new segment in Europe. VW dealers might also sell a Mazda light truck.

A VW spokesman dismissed the report as speculation, saying it is "absolutely not true." But he would not rule out possible VW-Mazda discussions. "Everyone is talking with everyone," he said.

Ford Motor Co., which owns 25 percent of Mazda, is known to be studying joint development and production of a European minivan based on the VW Passat platform. The plan is said to call for annual production of 200,000 units, with each marketing half under its own name.

The two sides have acknowledged general talks without supplying details. A Ford of Europe spokesman said he was unaware of VW-Mazda discussions.

Meanwhile, Mazda insiders in Germany said the company will not sell its new MPV minivan in Europe because it is considered too large and fuel consumptive. Instead, he said, Mazda is considering a minivan for Europe.

Mazda and Ford acknowledge that they are studying possible joint projects in Europe. One recurring rumor is that they will build cars at Ford's Saarlouis, Germany, production site. A Mazda spokesman in Brussels, Belgium, said that does not rule out possible discussions with others, "but we can't specify them."

A spokesman for Mazda's German importer said the company expects to be producing cars in Europe by 1992. And Mazda may indeed choose a German site, he said, because Japanese makers that have chosen British production bases have encountered many supplier problems. "It will be a joint venture, though it is not clear with whom," he added.

Ford's print campaign includes a four-page gatefold cover in news weeklies beginning this month. An eight-page magazine insert appears in the May issues of 18 general-interest, women's and lifestyle magazines.

Ford calls Escort intro its most important ever

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Last night's debut of the Escort commercials on prime-time television kicked off what Ford Motor Co. calls its "most important launch of a new vehicle in the history of the company."

The two TV commercials feature engineering-types huddled around computers and sophisticated-looking equipment, plus footage of the all-new 1991 Ford Escort.

"That's how strongly we feel the success of Escort is to Ford Motor Co.," says John Vanderzee, Ford's advertising manager. "It's more important than going way back to Mustang, or the first Escort, or Taurus in 1986. We feel very strongly about the importance of it. "We have a car that is truly competitive with the small import cars of the world."

The new Escort officially goes on sale Thursday, although some dealers have had them for weeks.

It is targeted to "import intenders" and will compete directly with Japanese cars such as the Honda Civic and Toyota Corolla. Mazda Motor Corp., which did most of the development of the new Escort, is not mentioned in the advertising

The car will be aimed at an even split of men and women, average age 32, with an average household income of about $35,000.

Vanderzee said the campaign focuses on product content and quality rather than price.

"Buyer motivation for the current Escort centers around price, deal, warranty and value," Vanderzee said. The motivation for buyers of small import cars "centers around product content and quality."

The campaign focus is Escort's "high-tech design and precision engineering." The campaign was developed by Ford's ad agency, J. Walter Thompson in Detroit. The two 30-second commercials end with the familiar "Have you driven a Ford lately?" and carry a new theme line: "A new line of thought. A new line of cars."

Ford's print campaign includes a four-page gatefold cover in news weeklies beginning this month. An eight-page magazine insert appears in the May issues of 18 general-interest, women's and lifestyle magazines. The publications have a combined circulation of 37 million.

Robert J. Gillooly, Ford Division car advertising manager, said Ford will maintain a heavy media schedule for Escort for the rest of the year. In the next two months, 50 to 70 percent of Ford Division's total car advertising effort will be devoted to Escort, he said.

Ford's media mix is roughly two-thirds television and one-third print. Ford is spending a "negligible" amount to supplement its dealer associations' outdoor billboard and radio advertising.

Ford declined to disclose how much it is spending on the launch. *Advertising Age*, a sister trade publication to *Automotive News*, estimates the company is spending $65 million to $70 million.

Ford joins CBS' Winter Olympics advertising lineup

Ford has made a deal with CBS to purchase commercial time on the 1992 and 1994 Winter Olympics, says John Vanderzee, Ford's advertising manager. Ford joins Chrysler Corp., which signed earlier this year.

A CBS spokesman said Ford and Chrysler will be the only domestic car advertisers and that the network expects to sign three makers of imports. CBS expects to sell a total of $100 million worth of time in the automotive category, he added.

Nissan's agency gets tight deal

By Jon Lafayette
CRAIN NEWS SERVICE

Nissan Motor Corp. USA is paying Chiat/Day/Mojo on a sliding scale ranging from an average 10 percent for the first $150 million in billings to 6 percent and less on additional spending.

The three-year compensation arrangement, part of Nissan's overall agreement with Chiat, was dated last Oct. 1 and was obtained by *Advertising Age*, a sister publication to *Automotive News*.

The Venice, Calif.-based agency gets those commission rates on media spending plus out-of-pocket expenses incurred servicing the account, including production costs. Agencies usually take a 16.75 percent markup on production costs.

The contract covers Nissan's national account; there is a separate agreement for Chiat's work for Nissan's major dealer associations.

Because of their sheer size, many carmakers spend more than $100 million with their agencies. Auto accounts are among the agency industry's most profitable pieces of business even though commissions are low.

Nissan's arrangement with Chiat isn't uncommon. General Motors Corp. recently completed a five-year program that gradually cut agency commissions to 9 percent from 15 percent during the 1990 model year. During the same period, GM's U.S. media spending rose 69 percent to $960 million, LNA/Arbitron Multi-Media Service figures show.

Industry executives estimated Chiat should be able to generate a $2 million profit before taxes on the account annually, based on spending at a $150 million rate.

Compensation was a controversial issue when Nissan was searching for a new agency to replace William Esty Co. of New York in 1987. Nissan reportedly sweetened its inital compensation before awarding the account to Chiat.

Chiat's sliding-scale Nissan commission

The three-year agreement between Nissan Motor Corp. USA and Chiat/Day/Mojo calls for Chiat to receive:

- A 12 percent commission on the first $50 million in spending.
- A 10 percent commission on the next $50 million.
- An 8 percent commission on the next $50 million.
- A 6 percent commission on the next $50 million.
- Plus 5 percent for any additional spending.

BMW executive arrested in son's murder

MUNICH, West Germany — Claus Luthe, the long-time chief stylist at BMW AG in Munich, has been arrested on suspicion of the murder of his 33-year-old son.

The 57-year-old Luthe allegedly stabbed his son, Ulrich, during a quarrel April 14 at Luthe's Munich home. Police said the son received multiple knife wounds.

Ulrich Luthe, who was known to have suffered from drug and alcohol abuse problems, recently returned to live with his father.

Luthe was arrested and is being held at a Munich hospital for psychiatric testing, according to a BMW spokesman. Doctors will report the findings to a Munich court in about three weeks.

The modest and reserved Luthe joined BMW as its chief stylist in 1976. He headed the teams which created the company's successful 5- and 7-series models as well as the new 850i coupe.

He supervises a staff of more than 100 employees. Early in his career, Luthe was responsible for the design of the NSU Ro80.

Corrections

- The April 16 editorial gave a wrong number for General Motors' first-quarter share of the U.S. car and light-truck market. GM actually gained 0.82 point to capture 35.63 percent of the vehicle market.
- Given names and titles were inadvertently omitted in two stories in the April 16 issue. A story on Page 2 should have referred to Yutaka Kume, president of Nissan Motor Co. A story on Page 6 should have referred to Jeff Cassell, general sales manager at Jerry's Mitsubishi in Baltimore.
- A story on Page 36 of the April 9 issue failed to provide the given name and title of Arthur Bryant, director of Trial Lawyers for Public Justice in Washington.

The L60, developed completely by IFA, is considered the East German truckmaker's most modern product.

Mitsubishi link rumored to end discord over M-B, E. German deal

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

LUDWIGSFELDE, East Germany — The new partnership between Mercedes-Benz AG and East German truckmaker VEB IFA Nutzkraftwagen Kombinat is running into opposition from federal monopoly authorities in West Germany.

With Mercedes already the world's largest maker of heavy trucks, cartel officials think the planned link with the East German commercial vehicles monopoly announced last month may concentrate too much of the German truck industry in one group.

Meanwhile, there are reports that Mitsubishi Motors Corp. may become involved in the partnership to relieve political pressure by involving a third party.

Wolfgang Kartte, head of the West German Cartel Office, has expressed concern, but no official action has been taken.

In response, Mercedes Vice Chairman Helmut Werner, who is responsible for truck operations, dismissed Kartte's concerns and said the relatively inefficient East German industries face a "catastrophe" without Western assistance in a market economy.

That view also is espoused by IFA General Director Lothar Heinzmann. While the IFA Kombinat has managed to engineer and develop a line of mid-range trucks on its own, he said IFA does not have the financial resources to modernize and needs a strong Western partner.

East German auto industry officials said Mitsubishi involvement could counter opposition from the Cartel Office.

But Heinzmann said Mitsubishi has not approached IFA. Indeed, he said he was "totally surprised" that there had been no inquiries from Japanese firms.

Asked if Mitsubishi involvement is possible, he said: "I can't say at this moment." Though Daimler-Benz AG has new links to Mitsubishi, a Mercedes spokesman dismissed talk of Mitsubishi involvement in the deal. "They don't need our help if they want to go into East Germany," he said.

Mercedes has agreed to design, produce and sell trucks with IFA. It will start supply a modified Mercedes cab for the 12-ton L60 model that Heinzmann said will arrive in mid-1991. East German sources say a successor for the L60 is also planned.

Though it produces only 40,000 trucks annually, IFA is a huge combine that operates 24 plants, employs 55,000 people and is more than 90 percent vertically integrated -- extremely high even by Western European standards.

Heinzmann said IFA's high level of vertical integration is among its chief problems. The L60, considered its most modern product, was developed completely by IFA.

The revised L60 with a Mercedes cab will retain the existing IFA engine, transmission, axle and other major components. "But we want to develop all components further," Heinzmann said.

IFA produces commercial vehicles in the two- to 12-ton range. The Soviet Union has supplied heavy trucks to East Germany.

Volvo GM moves Class 7 assembly to U.S. for component flexibility

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Volvo GM Heavy Truck Corp. will shift assembly of its Class 7 Volvo FE tractors and trucks from Ghent, Belgium, to its Orrville, Ohio, plant in January 1991.

Thage Berggren, Volvo president and chief executive officer, said the switch will allow the firm to offer more component flexibility, which will increase customer appeal.

Assembling the vehicles in the United States also will reduce Volvo GM Heavy Truck costs.

The U.S.-built models, the Volvo FE42 and FE42T, will have cabs fabricated in Sweden by Volvo and will offer the choice of an integrated Volvo drivetrain or one comprised of U.S. components.

The vehicles will look very similar to the current Volvo FE6 and FE7 models, Berggren said.

The FEs are cabover models, geared to urban or intracity delivery and short regional deliveries.

Cabovers generally account for a 10- to 12-percent share of the Class 7 market, which is dominated by conventional-design trucks.

Volvo GM Heavy Truck retailed 1,112 of the Class 7 FE vehicles last year.

Ford Heavy Truck Operations also plans to shift production of its medium-duty cabover Cargo models from Brazil to Louisville, Ky., in early 1991.

For 1991, Freightliner Corp. is planning a new line of medium-duty Mercedes-Benz trucks with a U.S. design and heavier U.S. component content.

Subaru showoff

A prototype of the next generation Subaru XT Coupe, which was quickly snapped in the left photo, reveals it is very similar to the SVX show car, right photo, which debuted at last year's Tokyo Auto Show. Carryovers include the unusual window-within-a-window side glass. The SVX sports a 3.3-liter, 24-valve flat six engine and includes full-time four-wheel drive, anti-lock brakes, electrically steered rear wheels and active suspension. U.S. introduction of the XT Coupe is expected in the 1991 model year.

VW leads as Europe sets 1st-quarter sales record

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — West European new-car sales set a record in the first quarter as they rose 1.8 percent over last year's total, the previous peak.

Three of the four major national markets registered gains over 1989.

Sales climbed to 3,721,500 in the three-month period, according to industry estimates compiled by *Automotive News*. March sales were up 1.2 percent at 1,354,100 units.

The full-year sales total last year was a record 13.4 million.

Volkswagen group, including the VW, Audi and Seat brands, edged past Fiat Auto group in the first quarter. Likewise, the West German market surpassed Italy in 1990 sales.

VW rose 4 percent to 535,400 in the quarter, while Fiat Auto's Fiat, Lancia and Alfa Romeo marques declined 8.9 percent to 532,400. VW captured 14.4 percent of the new-car market, compared to Fiat's 14.3 percent.

A 5.5 percent increase in Volkswagen brand sales to 359,400 and a 4.8 percent climb in Seat volume to 81,400 offset Audi's 1.7 percent first-quarter dip to 94,600. VW group sales in March increased 2.8 percent to 203,400.

Fiat, which was up 6.1 percent to 204,900 in March, has in recent years led the European sales race through the early months before surrendering the lead to VW in the second half. Last year, VW moved into first place in August and went on to edge its Italian rival.

John May of Automotive Industry Data Ltd. in Great Britain said Fiat has been held back this year by capacity constraints.

Peugeot S.A., including Automobiles Peugeot and Automobiles Citroen, was third in the first quarter with 475,700, down 5.1 percent from last year. But Peugeot group's 12.8 percent market share for the period was ahead of its 12.7 percent for the full 1989 calendar year.

General Motors, which has been fifth in sales in Europe for several years, edged past Ford Motor Co. into the fourth slot in the first quarter. GM sales totaled 418,800, a 4.2 percent increase over the same period last year and an 11.3 percent share.

Ford's three-month total was 407,700, a 0.7 percent decline from last year and an 11 percent market share. Regie Nationle des Usines Renault followed with three-month sales of 383,300, good for a 10.3 percent market share and a 3.6 percent year-to-year gain.

Taken together, first-quarter sales of Japanese cars rose 2.2 percent this year to 380,100 for a 10.2 percent market share, compared to 10.9 percent for all of 1989. The biggest gainer among the Japanese in the first quarter was Honda, whose 20.4 percent sales increase to 38,300, gave it 1 percent of the market. Honda's gain also was the biggest among companies ranked in the top 20 in European sales.

Mazda, the only other make with growth in double figures this year, was up 11.8 percent in the quarter to 68,000. Europe's biggest first-quarter sales decline in percentage terms was Saab's 13.2 percent drop to 16,400.

West Germany, Europe's largest market, was up 4.9 percent to 742,200 in the first quarter. German sales rose 0.3 percent in March to 307,500. May said the opening of Eastern Europe will have an indirect impact on markets like West Germany where used-cars are being snapped up by consumers from neighboring Eastern European countries.

"It will stimulate the new-car markets some if people get a good deal on their trade-ins," he said.

The Italian market, which was tops in Europe in January and February, rose 5.3 percent to 740,400 for the quarter with a 9.1 percent surge to 246,200 units in March. French sales have also been strong in 1990, increasing 10.8 percent to 649,100 for the quarter and up 6.8 percent to 223,300 in March.

But the United Kingdom continued to falter, dropping 5.6 percent to 208,700 in March and finishing the first quarter down 7.7 percent at 582,500. The decline is attributed to economic concerns traced to tightened monetary policies.

The Spanish market, which boomed in the second half of the 1980s, also slipped. Sales were down 9.7 percent to 99,000 last month, and volume for the first quarter in Spain dipped 10.7 percent to 262,300.

Interest rates batter British dealer profits

By Daniel Ward
STAFF CORRESPONDENT

LONDON — Sky-high interest rates, a declining new-car market and falling used-car values are taking a heavy toll on the profits of Britain's car dealers.

Although sales set a record in 1989, the British market slowed last autumn. Registration statistics show sales down 7.7 percent for the first quarter, compared with the January-March period of 1989.

Interest expense trebled last year for many of the major dealer groups listed on the London Stock Exchange. In many cases, that cut profits in spite of high sales, particularly in the first half of 1989.

Despite disappointing profits in 1989, Jardine Matheson, an international trading house, increased its 60 percent share in Lancaster plc to 100 percent. Lancaster owns Porsche, Mercedes-Benz, Jaguar, Ferrari and BMW dealerships.

One of the largest publicly owned groups, TKM plc, managed to increase profits. It also announced a £100 million ($165 million) takeover bid for Western Motor Holdings plc.

TKM wants to add to its 75 dealerships and import franchises for Daihatsu, Ferrari, Mazda and FSO. Western's portfolio includes the Lada and Proton franchises in addition to dealerships and other operations.

BRITISH DEALER PROFITS SLUMP

	Sales (millions)		Pre-tax profits (millions)	
	1988	1989	1988	1989
Appleyard	£327	£414	£9.0	£11.1
BSG	£539	£639	£23.1	£23.4
T Cowie	£462	£550	£25.1	£16.1
Lancaster	£150	£188	£4.4	£3.3
Perry Group	£304	£343	£8.4	£5.0
Evans-Halshaw	£292	£401	£10.0	£9.2

Lex Service*	£868	£1,023	£35.0	£36.8

*Interim Fiscal year of each company varies.
The British pound has traded between $1.61-$1.65 during the past few months.

Swedes rank Sierra most trouble-free

By Stig Bjorklund
SPECIAL CORRESPONDENT

STOCKHOLM, Sweden — For the first time in many years, a European car, the Ford Sierra, has topped a Japanese model in Sweden's annual listing of trouble-free cars.

Sierra recorded only 17 faults, mostly trivial ones, per 100 1987 cars inspected by *Svensk Bilprovning*, the Swedish national testing agency for vehicles. In doing so, Sierra beat the Mazda 626, Mazda 323 and Toyota Camry by small margins. They were followed by the Volvo 740 GLE and Opel Ascona.

Two other European vehicles, the Opel Corsa and Saab 9000i, and the Honda Civic and Honda Accord from Japan managed to land on the top 10 list. All had fewer than 20 faults per 100 cars.

Svenska Bilprovning's average result was 33 faults per 100 cars. The worst car, the Fiat Croma, showed 88 faults per 100. Surprisingly, many faults were also noted for the Mercedes-Benz 200 (69), Peugeot 205 (68), Volkswagen Passat (66) and Saab 900 (65).

The testing organization last year inspected 3.9 million vehicles, of which 3.1 million were passenger cars.

Nationwide, the Japanese retained the lead. The average number of faults per 100 cars inspected for the five best Japanese cars was 15.4, compared with 18.2 for West Germany, 26.0 for Sweden, 38.6 for the Netherlands (three models only) and 50.8 for the best five cars from France. Italian cars, with only Fiat Uno and Fiat Croma on the list, had an average of 62.5 faults per 100 cars inspected.

Big-truck dealers see rays of hope in bleak year

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

PHOENIX, Ariz. — Last year wasn't an outstandingly profitable one for medium-and heavy-truck dealers.

But as TRX-90, the American Truck Dealers 27th annual convention and exposition, gets under way, 1990 is beginning to look pretty good to dealers who have been operating in a sales trough.

If the market turns up in the latter half of this year, as many industry officials have predicted, dealers could still end up pretty close to 1989's profit level.

But a heavier concentration on service, parts and used-truck sales will also be required.

American Truck Dealers, a division of the National Automobile Dealers Association, is still predicting 125,000 Class 8 retail sales in calendar 1990, down from sales of 145,068 in 1989.

Frank Prezelski, an analyst with Rothschild Inc. of New York, feels sales could reach 130,000, depending on how much pre-buying major fleets do to beat the price increases that will result from tougher emissions standards on 1991 models.

Cummins Diesel Engine Co. of Columbus, Ind., the industry's price leader with 46.85 percent of the North American Class 8 market, will raise prices about $1,000 to $1,500 to comply with the standards, Prezelski noted.

If the market moves upward, as reports from some major fleet buyers now indicate, pre-buying could easily add an extra 12,000 sales in the second half of this year.

The more conservative 125,000-unit sales projection also includes a moderate amount of pre-buying.

Currently, heavy-truck orders are 7,000 to 8,000 units a month. A surge of pre-buying would increase orders more than 50 percent in May, June and July for trucks that will be delivered in October, November and December.

It normally takes three to four months to deliver a heavy truck after it is ordered.

Meanwhile, Fred Stevenson, manager of ATD Consulting Services of McLean, Va., pointed out that total sales of dealer operations were up, while their profits were down slightly last year.

"It means they had to work harder for what they got. There was a profit squeeze, which is always the way it is when things tighten up," Stevenson said.

ATD Consulting Services handles American Truck Dealers' 20 Groups, which include 136 dealers. Each group consists of about 20 dealers with similarly sized dealerships that handle similar products. The groups meet regularly to discuss all facets of their business.

Last year's profit squeeze was most evident in new-truck grosses, which were off after increasing in 1988. But dealers reported better used-truck grosses.

They also did a better job in key categories like parts, labor and warranty sales, all of which were up for the year.

Overall, average monthly pre-tax profit as a percent of sales for 20 Group dealers dropped to 1.9 percent from 2.2 percent in 1988. It was just slightly ahead of 1.8 percent in 1987.

They averaged $30,191 a month in profit before taxes in 1989, based on the 1.9 percent rate of return and monthly average sales of $1,589,000.

That compared to $33,400 a month in pre-tax profit in 1988, based on a 2.2 percent rate of return and monthly average sales of $1,518,200.

Dealers' average monthly gross income before deducting expenses rose to $233,200 from $216,500 in 1988, indicating that they did more business.

But their cost of doing business increased, as indicated by average monthly expenses, which climbed to $208,200 from $190,900 in 1988.

Expenses as a percent of gross profit increased to 95.4 percent from 93.8 percent the previous year. They had been on the wane. The increase indicates dealers still have their work cut out in controlling expenses.

On a brighter note, dealers' parts, labor and warranty sales climbed sharply to $443,600 a month from $390,300 in 1988, indicating more backshop activity.

Their used-truck business also improved. Dealers sold an average $166,200 worth of used vehicles monthly compared to $153,000 in 1988.

The slide in new-truck sales is evident from the $952,800-a-month average posted for 1989 compared to the $959,300 average of a year earlier.

American Truck Dealers is continuing to recruit new dealers and hopes to have 150 dealers in its 20 Groups by the end of 1990.

Ron Schonscheck will become ATD dealer management consultant, working with Stevenson, effective May 1.

Defendants.

Civil Action Number 49-C-1071

TAKE NOTICE that E.I. du Pont de Nemours and Company ("Du Pont") a defendant in this action, has filed a motion for an order terminating the Final Judgment in this antitrust action, which was entered in March 1, 1962. The plaintiff, the United States of America, ("Government"), has consented to the entry of such an order, but has reserved the right to withdraw its consent for at least seventy (70) days after the publication of the notice.

The complaint in this case (filed on June 30, 1949, and later amended in 1952 and again in 1953) alleged, *inter alia*, that Du Pont had gained an illegal preference over its competitors in the sale of automotive finishes and fabrics to General Motors Corporation ("GM"), also a defendant therein, due to the acquisition during 1917-1919 by Du Pont and related parties of 23% of GM's common stock. The acquisition was asserted to violate Section 7 of the Clayton Act and Sections 1 and 2 of the Sherman Act. The complaint was dismissed by the district court after trial, which decision was reversed on appeal by the Supreme Court which directed that all of the GM stock held by Du Pont, Christiana Securities Company ("Christiana") and related parties be completely divested.

The Final Judgment required that Du Pont, Christiana, various members of the du Pont family and certain other individuals divest themselves of all GM stock, enjoined them from future acquisitions of such stock, prohibited Du Pont and GM from entering into any requirements contracts until the offending GM stockholdings had been divested, and forbade various interlocking relationships among the defendants. While most of its operative provisions have already expired, the Final Judgment, as presently in effect, still enjoins: (1) Du Pont and Christiana from acquiring GM stock; and (2) certain interlocking relationships between Du Pont and Christiana on the one hand and GM on the other.

The Government has filed with the court a memorandum setting forth the reasons why the Government believes that termination of the Final Judgment would serve the public interest. Copies of the complaint and Final Judgments, Du Pont's motion papers, the stipulation containing the Government's consent, the Government's memorandum and all further papers filed with the court in connection with this motion will be available for inspection at Room 3233, Antitrust Division, Department of Justice, 10th Street and Pennsylvania Avenue, N.W., Washington, D.C. 20530 (telephone 202-633-2481), and at the Office of the Clerk of the United States District Court for the Northern District of Illinois, Eastern Division, 219 Dearborn Street, Chicago, Illinois 60604. Copies of any of these materials may be obtained from the Antitrust Division upon request and payment of the copying fee set by Department of Justice regulations.

Interested persons may submit comments regarding the proposed termination of the decrees to the Government. Such comments must be received within the sixty-day period established by court order, and will be filed with the court by the Government. Comments should be addressed to P. Terry Lubeck, Chief, Litigation II Section, Antitrust Division, Department of Justice, Washington, D.C. 20001 (telephone: (202) 724-7966).

Police in Sault Ste. Marie, Ontario, flag down a passing car in their hunt for alcohol-impaired drivers. As many as 80 Ontario police departments will be leasing Axxess vans for spot checks and school programs.

Nissan, Canadian dealers offer cut-rate Axxess lease to police

MISSISSAUGA, Ontario — Nissan Canada Inc. and its dealers have begun subsidizing Axxess leases in a program that could reach as many as 80 police departments in Ontario.

The departments will pay $100 ($86 U.S.) a month to use the small vans in school safety programs and spot checks for drunken drivers. Nissan and participating dealers will pay the remaining portion of the lease cost.

The Axxess leases for about $400 ($343 U.S.).) per month in Canada.

John Bates, president of People to Reduce Impaired Driving Everywhere, called Nissan's move "a display of corporate altruism that's unmatched."

Work under way on office park at former Camaro-Firebird plant

NORWOOD, Ohio — Construction of a $100 million office park has begun on the site where a General Motors assembly plant closed in 1987.

GM was Norwood's largest employer when it closed the 4,300-employee plant. The plant assembled Chevrolet Camaro and Pontiac Firebird models.

The developer is Belvedere Corp. of Cincinnati. Belvedere said Star Banc Corp., also based in Cincinnati, will be the first major tenant of the Central Parke complex.

Star Banc plans to move retail and credit card operations into a 40,000-square-foot building.

Belvedere officials said two other office buildings will be built. Those buildings and the Star Banc building are expected to be ready for occupancy in January 1991.

— The Associated Press

Honda and Rover finalize terms of United Kingdom collaboration

NEW YORK — Honda Motor Co. and Rover Group have formally agreed on the terms of the collaboration that the two companies plan for the United Kingdom.

Tadashi Kume, president of Honda, and Sir Graham Day, chairman of Rover, signed the agreement in New York April 14.

Honda will become a 20 percent owner of Rover's £520 million ($853 million) equity. Rover is a member of the British Aerospace plc group.

In return, Rover will take a 20 percent share in Honda's British manufacturing arm, Honda of the UK Manufacturing Ltd.

At present, Honda of the UK Manufacturing is capitalized at £60 million ($98 million), but that will be increased to £370 million ($607 million) by 1993. To make up the balance, Honda will pay £30 million ($49 million) in cash to Rover.

Shoichiro Irimajiri, a Honda senior managing director, will join the Rover board. John Towers, Rover's product development director, will join the board of Honda of the UK Manufacturing.

Collaboration between the two companies dates back to 1979.

Honda's British plant at Swindon will be capable of producing 100,000 cars a year. It will start manufacturing a new range of cars in late 1992.

Honda said Swindon-produced cars will meet European requirements on local content.

Japanese steady as March import sales slip 6%

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Import-car sales fell 6.64 percent in March, against an industry-wide drop of 3.21 percent.

But Japanese imports continued to increase. Japanese automakers supplemented their growing sales of U.S.-produced cars with 164,849 imports, up 0.66 percent from a year earlier.

The story for European and Korean imports was bleaker.

European nameplates sold 43,971 cars last month, 11.69 percent fewer than in the year-ago month.

Korean makes dropped 36.84 percent to 19,714 cars.

The Big 3 of the import world — Toyota Motor Sales Inc., Nissan Motor Corp. in U.S.A. and American Honda Motor Co. Inc. — sold 106,204 cars, or 46.5 percent of the 228,534 imports delivered last month. Those figures include Lexus, Infiniti and Acura.

Toyota remains the leading import make, although its sales fell 3.30 percent in March.

Sales of imported Toyota Camrys dipped 41.08 percent to 6,284, but Toyota sold 19,636 U.S.-built Camrys, which are not included in the import total. Celica sales were up 60.28 percent, and Tercel rose 22.76 percent.

Toyota's Lexus Division continued on its 4,000-plus monthly sales pace by selling 4,861 units last month.

Nissan slipped as Sentra, Pulsar and 240SX fell behind last year's figures. Sales of the new Stanza, a crucial entry for Nissan, rose 87.85 percent to 6,898.

Infiniti, with 1,549 sales in March, topped 1,500 for the first time.

Honda's 17.5 percent gain came primarily from the Accord, which was up 36.29 percent.

With a 15.7 percent increase for the Integra and a 17.3 percent decline for the Legend, Honda's Acura sales rose 26 units in March.

Mazda Motors of America Inc. had a record sales month when its U.S.-built 626 and MX-6 are included. But Mazda's import sales fell 4.04 percent.

Import sales for Mitsubishi Motor Sales of America Inc. were up 19.43 percent to 8,868.

Mitsubishi Mirage sales of 4,464 units were nearly four times those of the year-ago month.

European importers exceeding their 1989 sales were Audi of America Inc., Volkswagen United States Inc., Jaguar Cars Inc., Mercedes-Benz of North America Inc. and Porsche Cars North America.

Mercedes sales were up 4.9 percent from March 1989. Much of the gain came from the 190 series, which jumped 22.4 percent.

Sales of Audi's 100/200 models more than doubled, helping Audi to a 65.8 percent monthly gain. Porsche sales rose 41.08 percent.

Jaguar sold 1,746 cars, up 7.12 percent from a year ago.

Porsche, bolstered by new entries and an advertising campaign, saw sales jump 41.1 percent to 941 vehicles.

One of the losers last month was BMW of North America Inc., whose sales fell 9.92 percent despite leasing and financing promotions.

Only the BMW 5 series outpaced last year's total. Sales of the entry-level 3 series dropped 13.1 percent to 2,435.

Saab sales in March dipped 13.58 percent below the year-ago total.

Volvo sales were down 16.98 percent.

Avanti adopts Kevlar, carbon fiber material

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Avanti Automotive Corp. is using carbon fiber composite and Kevlar body materials in its 1990 four-door sedan.

The new body materials were featured at the recent New York International Automobile Show.

J.J. Cafaro, Avanti president and chief executive officer, invited reporters to slam one of the plastic bodies with a sledgehammer. The hammer scratched the finish but it did not appear to damage the body.

Hexcel Corp., an aerospace materials firm located in Dublin, Calif., supplies Avanti with a variety of carbon fiber composite materials. Hexcel has built materials used in America's Cup yachts, helicopter blades and missiles.

Composites are used in the roof, roof reinforcements and roof pillars, and in place of steel door beams. Kevlar is replacing the floor pan, bumpers and other high-stress areas.

Avanti's entire line, including the sedan, a coupe and a convertible version, eventually will have complete composite body structures, Cafaro said.

Youngstown, Ohio-based Avanti built about 300 cars in 1989. It hopes to build over 500 in 1990.

GM, partner get tax break from Hungary

SZENTGOTTHARD, Hungary — General Motors and its joint-venture partner here will be exempt from taxes for 10 years after it starts building engines for Opel Kadetts and Vectras.

GM owns 67 percent of the joint venture. Raba Railways Carriage and Machine Works owns 33 percent. The new plant being built here will produce between 100,000 and 200,000 1.6-liter engines a year, beginning in 1992. It also will assemble 10,000 to 15,000 Kadetts a year for sale mostly in Hungary. The company will employ 800 to 850 people.

GM Austria will coordinate construction of the plant in this community near the Austrian border.

Spiffs fail to help Big 3; April 1-10 sales off 10.7%

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

The first 10 days of April brought gloomy car sales reports from the Big 3, but every transplant except Nissan showed a gain.

Despite hefty incentives, combined car sales for General Motors, Ford Motor Co. and Chrysler Corp. declined 17.68 percent from a strong year-earlier period.

The transplants as a group were up 51.59 percent.

Car sales in early April totaled 163,340, down 12.54 percent from 186,752 in the first 10 days of April last year.

Truck sales were nearly as dismal. GM and Nissan posted slight increases; Ford and Chrysler reported declines.

Truck sales totaled 99,107, down 7.49 percent from year-ago figures.

The combined car-truck figure of 262,447 was 10.70 percent below last year's 293,879.

"For a spring selling market still characterized by pervasive incentives, these numbers don't look good," said Tom Webb, chief economist for the National Automotive Dealers Association in McLean, Va.

"Unless there is a major change in the economy, domestic new-car sales appear destined to remain in their current doldrums," he said.

Webb said that early sales trends are in line with NADA's forecast that 13.7 million vehicles will be sold in the 1990 calendar year.

Chrysler's total vehicle sales suffered the most, down 27.13 percent in early April.

Even its truck deliveries, which had been holding steady, dropped 24.91 percent. Car sales fell 29.22 percent.

GM was down the least of the Big 3; its total vehicle sales dipped 8.38 percent.

GM's cars were off 13.60 percent from last year, but trucks were up 2.24 percent.

The automaker's new plastic-bodied minivans, the Chevrolet Lumina APV, Oldsmobile Silhouette and Pontiac Trans Sport, accounted for the truck gain.

Ford's overall dip was 15.06 percent — 18.66 percent for cars and 9.33 percent for trucks.

Among the transplants, Honda's car sales climbed 16.99 percent in early April.

Car sales doubled for Toyota, tripled for Mazda and nearly tripled for Mitsubishi. Mazda has added the 626 series to its U.S.-built models this year; Toyota and Mitsubishi are producing more cars at U.S. plants that were in the start-up phase a year ago.

Truck sales helped Nissan post a gain of 6.03 percent for the 10-day sales period.

Car sales were down 6.03 percent,but a 14.22 increase in truck sales pushed up Nissan's overall vehicle sales.

Sales of vehicles produced at the new Subaru-Isuzu Automotive plant in Lafayette, Ind., totaled 73 Subaru cars and 243 Isuzu trucks in early April.

CHRYSLER

FROM PAGE 3

same period in 1989.

Dauch said that as part of Chrysler's five-year, $15 billion capital spending plan, the company will upgrade its three stamping operations by 1994 and build stamping plants at Bramalea and Belvidere.

Dauch

Stamping plants in Sterling Heights, Mich., Warren, Mich., and Twinsburg, Ohio, will get new press lines, new transfer presses and more automation for older presses.

Mitsubishi Motor Corp. will be an equity partner in the Bramalea stamping plant, "but it will be totally operated by Chrysler," Dauch said. Mitsubishi and Chrysler are partners in the Diamond-Star Motors Corp. plant in Normal, Ill., which has its own stamping plant.

Dauch also said Chrysler anticipates completing this summer's model changeover in four weeks at the minivan assembly plants in St. Louis, Mo., and Windsor, Ontario.

Windsor will go down for July. St. Louis will go down throughout August.

In the 1991 model year Chrysler is launching a newly styled minivan and is adding anti-lock brakes and all-wheel-drive as options to the vehicles.

TURIN

FROM PAGE 3

cel. "But nothing is signed."

Ital's Aztec twin-cockpit roadster, one of the stars of the Turin show in 1988, will be produced by Turin specialist Carrozzeria Savio for the Japanese market. Hideyuki Miyakawa of the Turin trading company Compact, which bought the rights to the design, now says Aztec's twin, the Aspid coupe, may also be produced in limited numbers.

Miyakawa said 52 Aztecs will be produced. Sales in the United States are possible, but not likely, he said.

Pininfarina's aerodynamic CNR E2 four-seat sedan was done in cooperation with Fiat Auto, Alf-Lancia S.p.A. and the Italian National Research Council. Based on a 1.4-liter Fiat Tipo, the extremely slick running prototype seats five and is capable of 127 mph.

Industrie Pininfarina S.p.A., the manufacturing arm of the firm, is also breaking new ground as it attempts to move from coachbuilder to complete carmaker. Andrea Pininfinarina, general manager, said the company will manufacture a new Peugeot convertible beginning in 1993. But he said two new projects will go into production at Pininfarina before the Peugeot, including an Alfa Romeo.

Another Turin coachbuilder, Carrozzeria Bertone S.p.A., showed the Nivola sports car that had been in Geneva. But Bertone has other interesting projects in the pipeline.

Managing Director Paolo Caccamo said the company has designed for a manufacturer a new sports car that will go into production in late 1991 or early 1992. He said Bertone also will produce the bodies. Speculation is it might be a second Bugatti model.

Caccamo also said the project to replace the long-dormant Bertone-badged X 1/9 sports car may be revived using Adam Opel mechanicals.

Ford Motor Co.'s Ghia studio in Turin showed the Zig and Zag minicars that debuted at Geneva. Immediately after the show, which ends May 1, they will be shipped to Dearborn, Mich., for inspection by top Ford management.

Ferrari S.p.A.'s 348, which debuted six months ago, was still a center of attention at Turin. Marketing executive Giovanni Perfetti said about 300 of the cars will be sent to the United States this year.

Production of the 348 is up to eight daily and is expected to reach 10 in June. Eventually, half of output will be shipped to America.

Perfetti said the successor to the current four-seat 412 will be called the 512-GT America and will debut at the end of 1991.

Automobili Lamborghini S.p.A. has started pre-production of the Diablo, and regular output will begin in July, according to Director General Gianfranco Venturelli. The first car will be delivered in late September or early October. American deliveries will begin in October.

Annual production of Diablo will ultimately go no higher than 500 units, with 30 to 35 percent destined for North America. Meanwhile, the replacement for the defunct Jalpa model is planned for the third quarter of 1992.

Britain's International Automotive Design has become a staple at the Turin show in recent years, though its Mini-MPV van missed the first press day — "lost somewhere between here and Milan," said aggravated officials.

The company also presented a running prototype of the Venus sports car that was shown in Tokyo last fall as a model.

A major design and engineering shop, International Automotive Design has become a limited-series producer as well. The company has begun serial production of an unnamed model that will be sold by another automaker. Officially, company executives are saying nothing. An announcement of the project is expected this fall.

Automotive News Staff Correspondent Luca Ciferri contributed to this report.

MIATA

FROM PAGE 3

hardtop is $1,100, and automatic transmission is $720.

Since the June 1989 launch, Mazda has sold nearly 30,000 Miatas. The company expects to sell its entire Miata allotment, 40,000 cars, this calendar year and next. Bymaster says days' supply is "the same as it was at launch — basically non-existent."

Miata's strongest month was August, with 5,029 sales nationally. February was the slowest month, with 2,510, but that was followed by a 36.8 percent increase in March to 3,435.

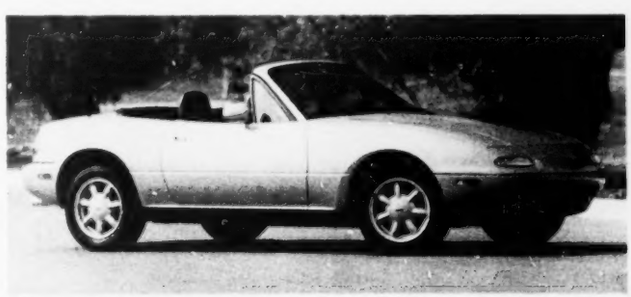
Bymaster says Mazda is watching dealer pricing closely. "It's something that concerns us," he says. "You set goals for the company and strategies to achieve them. An affordable sports car is one of those goals, and we have to make sure that this pricing doesn't hurt the overall image."

He adds that the only formal action was a letter sent to dealers during last year's launch, asking them not to price the car too high.

Kory Johnson, general manager of Campbell Mazda in Costa Mesa, Calif., has held to sticker from the beginning. He says the strategy initially cost him some customers, who paid a premium to get their Miatas elsewhere.

"But we're in it for the long run," Johnson says. "People have started to learn that we sell at sticker, and they are shopping us for that reason."

Competition will drive onto the Miata's turf this summer, when convertible versions of the Toyota Celica, Mercury Capri and Geo Metro are introduced.



Mazda's Miata is still bringing an average of $2,500 over sticker price. The premium appears likely to continue with the arrival of convertible season.

OBITUARIES

Frank Garard

IRVINE, Calif. — Frank Garard, a 17-year Mazda employee, died March 23. He was 68. Garard joined Mazda in 1971, working in a variety of managerial and executive positions until he retired in 1988. Prior to joining Mazda, Garard worked 23 years at Chrysler Corp.

Lewis W. Somers

NEW HAVEN, Conn. — Lewis W. Somers, a former New Haven area Pontiac dealer, died March 26. He was 72.

Dana Kull

BOCA RATON, Fla. — Dana Kull, a co-owner of Avalon Honda, Swainton, N.J., died April 11. She was 44. Kull was also an accomplished pilot and member of the International Chapter of the 99's, a women's pilot association.

PAINT

FROM PAGE 1

tant" to the invaders from the sky.

The Detroit Ford dealer, who asked not to be named, said the generally yellow spots are most prominent on darker cars. "I can wash the cars in the morning, but by lunch, the spots will be back out; I don't know how this has been covered up this long," he said.

The transit coating solution was tested last summer on Taurus and Sable models produced at Ford's Atlanta assembly plant.

Dealers say warranty claims have been reduced on those cars.

Jim Tidwell, president of Jim Tidwell Ford in Kennesaw, Ga., says he has been filing paint damage claims with Ford for four or five years.

"They have been very fair in approving and handling claims for acid rain damage," he says.

Frank Beideman, sales manager for Holman Lincoln-Mercury in Shady Lane, N.J., says the coating "completely eliminated paint damage on the Sables we received from the Atlanta plant."

Neither Ford nor GM would divulge the amount of annual warranty claims stemming from the paint problems.

Most Japanese importers coat their imported cars before they ship them to the United States; as for the transplants, Toyota Motor Manufacturing U.S.A. Inc. says it coats cars upon dealer requests; Nissan Motor Manufacturing Corp. U.S.A. says it does not have a coating program.

A source who worked closely with Ford during the transit coating test program said the company told him it shells out about $60 million annually. He said GM and Chrysler face a similar dilemma.

"We cover these claims," said GM's Mowers, but he said he had no idea how much the claims amount to each year.

Chrysler spokesman Tom Jacobowski said he could not find out any information about paint problems at Chrysler.

For the past 18 months, GM has been coating Chevrolet Corvettes at its Bowling Green, Ky., plant and Oldsmobile Cutlasses at its Doraville, Ga., plant.

Mowers said Chevrolet Corsica and Beretta models were coated for a while at GM plants in Wilmington, Del., and Linden, N.J.

The coating will be applied to all Ford vehicles except those produced at the St. Thomas, Ohio, truck plant and the St. Louis and Edison, N.J., assembly plants.

In his letter to dealers, Ford's King wrote that a tougher ure thane paint, which better resists environmental fallout, is used on the Crown Victoria and Grand Marquis that are produced at St. Thomas. The Econoline van, produced at Ohio Truck, and the Aerostar minivan, produced at St. Louis, have limited horizontal surfaces that can be seen.

Edison will be closed for a plant changeover from Escorts to Ranger trucks when the coating begins.

The letter said the coatings will be applied from May through October, when vehicles are most susceptible to fallout.

King advised dealers to leave the solution on until they sell the cars, or up to six months. After six months, removal becomes harder.

King said Ford will provide the cleaning product, and the company will compensate dealers for the time it takes to remove the substance.

Dealers who have their cars prepped at the factory's predelivery centers can choose to have the center remove the coating.

Audi adds sales spiffs

Audi of America, which has shunned cash incentives for the past few months in favor of leasing programs, announced a new dealer incentive plan last week.

Audi spokesman John Giova said dealers asked for the return of incentives.

"The market is so competitive, and not all our customers are leasing customers," Giova said. "Dealers said, 'Give me some more options.' "

Dealers can take the incentive as factory-to-dealer cash or give the customer special retail finance rates.

The finance rates are 4.9 percent for contracts up to 36 months; 6.9 percent for 48 months; and 9.9 percent for 60 months. Dealers who choose the cash receive $2,000 on sales of the Audi 80, 90, 100, 200 and Coupe Quattro and $3,000 on the Audi Quattro V-8. The program expires June 30.

Audi is still offering the "Audi Advantage," a three-year, 50,000-mile leasing program that includes all scheduled maintenance, corrosion protection and 24-hour road service.

Output rises in another short week

By Karen Detkowski
AUTOMOTIVE NEWS STATISTICIAN

Automakers scheduled output of 112,398 cars last week, an increase of 7.51 percent above the previous week but 30.40 percent below the year-ago week.

Monday was a holiday for Big 3 plants, marking their second consecutive holiday week. U.S. plants operated by foreign makers resumed production Monday.

Car production for the year to date is 1,799,625 units, 24.38 percent below the 1989 total at this time.

Truck assembly was targeted at 72,861 units last week, 4.84 percent above the prior week but 21.42 percent below the year-ago week.

So far this year, 1,181,215 trucks have been built, 17.91 percent below last year's total at this point.

Companies split last week's scheduled production as follows: General Motors, 41.65 percent; Ford Motor Co., 26.95 percent; Chrysler Corp., 9.61 percent; Honda of America Manufacturing Inc., 7.91 percent; Toyota Motor Manufacturing U.S.A. Inc., 3.91 percent; New United Motor Manufacturing Inc., 2.94 percent; Mazda Motor Manufacturing (USA) Corp., 2.75 percent; Diamond-Star Motors Corp., 2.62 percent; Nissan Motor Manufacturing Corp. U.S.A., 1.26 percent; and Subaru-Isuzu Automotive Inc., 0.40 percent.

GM reported that its Willow Run, Mich., and Lansing, Mich., car plants and the Tarrytown, N.Y., minivan facility worked Saturday overtime last week. The Janesville, Wis., Cavalier assembly plant was on overtime Friday.

Ford scheduled Saturday overtime last week at the Wixom, Mich., car plant and the St. Paul, Minn., truck facility.

Daily overtime was scheduled at Ford's Wixom; Kansas City, Mo., and Wayne, Mich., car plants.

Ford will idle the Lorain, Ohio, plant the week of April 30 because of a falloff in dealer orders for Thunderbird and Cougar.

Both shifts at Chrysler's Dodge City truck plant in Warren, Mich., began working nine hours a day last week.

As previously reported, Chrysler's St. Louis No. 1 plant is operating on a single eight-hour daily shift during April.

Canada climbs after holiday

Canadian automakers scheduled 19,089 units last week, 42.52 percent above the Easter week but 4.28 percent below the year-ago week.

So far this year, 302,121 cars have been assembled, 5.00 percent below last year's tally.

Truckmakers' targeted output of 19,549 was 15.94 percent above the previous week but 6.89 percent below the year-ago week.

To date, 1990 truck output is 283,705 units, 11.55 percent below the year-ago total.

Ford's Oakville, Ontario, plant extended downtime last week. It is scheduled to resume output today.

Benton aims Ford at 'core' business; other types get ax

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — When the new management team is finished pruning Ford Motor Co., the only things the company will make are cars, trucks and money.

Philip E. Benton, Ford's new president, said last week that Ford is divesting itself of its non-core products, such as aerospace, tractors and steel, in an effort to make substantial investments in its core automotive and financial services businesses. The sale of those subsidiaries unravels Ford's decades-long attempt to diversify.

"You have to make up your mind where you want to play your chips," Benton said.

"As we look at it, first, the needs of automotive and financial services are substantial. Secondly, we can make more money. We are demonstrably better at automotive and financial services than we have been in aerospace.

"To be a major player in the tractor and implement business is going to require major investments and we believe that we are better off making those kinds of investments in either financial services or cars and trucks," Benton said.

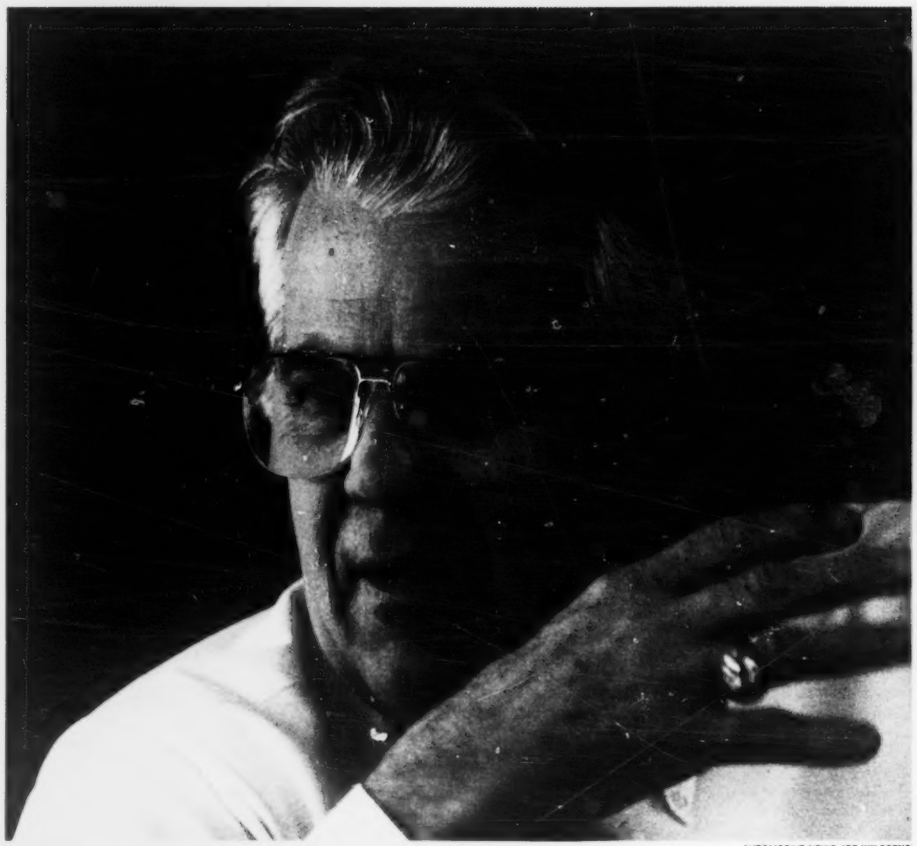
● Ford announced three weeks ago that it is discussing "worldwide arrangements" with Fiat, involving each company's tractor and heavy-truck business.

If a deal is consummated, Ford will sell its Ford New Holland tractor and implement subsidiary to Fiat, and Fiat will sell Ford-branded farm equipment worldwide "for at least a period of time," Benton said.

"The tractor and implement business is screaming for consolidation; worldwide there are too many players and it's got to be narrowed down to fewer players," Benton said.

In heavy trucks, Ford is interested in joint venture products or components (such as engines) with Fiat's Iveco truck division. Neither company wants to sell its heavy-truck businesses, he said.

see BENTON, page 40



AUTOMOTIVE NEWS/JOE WILSSENS

The high cost of developing new vehicles has prompted Ford Motor Co. to sell some diversified subsidiaries, President Philip Benton says. Peter J. Pestillo was named to head those operations, story on Page 45.

Nissan drops Axxess from U.S. market

By Kristine Stiven Breese and Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTERS

Nissan Motor Corp. in U.S.A. is dropping its Axxess, a hybrid wagon/minivan, after just one model year.

Japanese production of U.S. versions has stopped, and the vehicle won't be available after the current 185-day stockpile is sold, said Nissan spokesman Bill Pauli.

"Because of limited production resources in Japan and here, we are now in the process of refocusing our product line to full-line products rather than continuing with niche vehicles like the Axxess," Pauli said.

He said the market for the Axxess has been limited by the fact that it isn't a full-sized van and isn't quite a wagon, either.

The demise of the Axxess illustrates the intense competitiveness of the minivan market. One Nissan dealer said the Axxess, which went on sale 13 months ago, was ren-

Jaguar has worked for years to develop this F-type sports car, the successor to its famed E-type, but Ford may have a different idea.

Ford may kill Jaguar dream to replace revered E-type

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Ford Motor Co. may pull the plug on the Jaguar F-type sports car project that was central to the British firm's product plans before its acquisition by Ford last fall.

The successor to the legendary E-type produced from 1961 to 1975 has been under development for several years. But the car, feverishly anticipated by enthusiasts, is now under the gun as Ford formulates a strategic plan that is expected to be completed by October.

Neither company will discuss new product programs, but a Jaguar official said "everything is being reassessed."

William J. Hayden, a senior Ford of Europe executive, was named in March to succeed long-time Jaguar Chairman Sir John Egan, who had shepherded the F-type project since its mid-1980s inception.

POWER: *Big 3 hope speed, size punch up '91 sales*

By Laura Clark, Mary Connelly, Michelle Krebs, Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTERS

The Big 3 is going back to the future with bigger and more powerful cars as a way to bolster slumping sales and sagging market share, according to preliminary 1991 model information provided fleet customers.

Meanwhile, both Nissan and Toyota will introduce redesigned and refined entry-level vehicles as a way to attract new-car buyers.

Chrysler Corp. will introduce a 3.8-liter V-6 engine, replacing the V-6 it had purchased from Mitsubishi Motors Corp.

Ford Motor Co. ups the standard power on its F-series trucks and Lincoln Town Car, while General Motors fits its new 4.9-liter V-8 in several Cadillacs.

The 1991 model information is provided in a 48-page booklet prepared by LMV Leasing Inc. of Pittsburgh. The booklet is used by fleet operators and administrators in selecting vehicles. More than 200 car, van and light-duty truck models are mentioned.

The booklet highlights the products of the top five automakers ac-

ZR-1 prices backing down

The ZR-1 Corvette roared into showrooms last fall commanding prices as impressive as its performance figures. Prices are now falling, but not below the $58,995 sticker. Story, Page 2

Talkin' proud

GM workers, retirees are driving force behind sales program

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Bert Donahue drives a General Motors product and believes others should, too.

So he spends much of his spare time talking up the attributes of GM vehicles and trying to get everyone he meets behind the wheel of a car sold by the No. 1 maker.

His efforts have paid off. Last year, he "sold" 29 GM cars. GM awarded him a jacket for the first sale and a GM pin for each subsequent sale.

Donahue isn't a car dealer, nor a salesman by trade. He's a supervisor of education and training at GM's engine plant in Tonawanda, N.Y., and is one of the many GM employees and retirees participating in the "GM Proud Employee Sales Referral Program."

The corporate-wide voluntary program urges employees to become corporate ambassadors by initiating vehicle sales and spreading good will about GM.

Donahue said he got involved for one reason: "I firmly believe in our product."

The program began three years ago when Chevrolet was introducing its Corsica/Beretta line, said Mark Leddy, Chevrolet-Pontiac-Canada Group civic affairs manager and coordinator of the project.

Employees at five C-P-C plants were so enthusiastic about the cars that they started an informal word-of-mouth promotion.

The informal sales force picked up so much steam that C-P-C awarded GM jackets or pins for every car they helped to sell.

A year later, the program spread to GM's Buick-Oldsmobile-Cadillac Group, and last December it went corporate-wide.

Top management is so pleased that it published a product guide for program participants that includes color pictures of each GM car and truck, its specifications and base price.

Participation is voluntary, and the rewards are tokens. Leddy said GM employees do it because they care about the company, and by doing so they are making an investment in their own futures.

Last year, the extended sales staff helped sell more than 10,000 vehicles.

As a result of the program GM has augmented its dealership sales organization by 825,000, which includes more than 300,000 retirees. Last year, the extended sales staff helped sell more than 10,000 vehicles.

Donahue, a 26-year GM veteran, said prime customers are family members, business associates and members of social organizations of which he is a member.

He said one of the most challenging aspects of his sales pitch is to convince people who have had negative experiences to try the product again. In those cases, he makes himself a liaison between the dealer and customer.

Eleven of his customers were former owners of foreign cars.

Leddy said research indicates that people are more apt to buy a GM product or have positive feelings about GM if encouraged to do so by a friend or relative who works for the company.

Here's how the program works: After discussing the attributes of GM products with a potential customer, the employee refers that person to a GM dealer. The employee also gives the prospect a referral card that is presented to the dealer for validation. The card, which serves as proof of the employee's role in the sale, is returned to GM.

Employees receive their awards and recognition at a ceremony attended by their peers and by top management.

But selling cars is not the program's main thrust, Leddy insists. He says the whole idea is to encourage GM employees and retirees to become company ambassadors while formally recognizing something many of them have been doing for years.

"It's not revolutionary that employees are doing this; what is revolutionary is that they are being recognized," he said.

Hyundai boss outlines plan for revival

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

The new head of Hyundai Motor America Inc. has unveiled a four-point plan for reviving the slumping franchise.

Rodney E. Hayden, who took over as executive vice president and chief operating officer in January, outlined the program to the company's 326 dealers two weeks ago.

The strategy includes:

- Boosting dealer profits by giving higher rebates on cars that carry more options.
- Backing that move with a new advertising theme: "World Class Value."
- Creating incentives to limit turnover on dealer sales staffs.
- Having Hyundai's new financing company in operation nationwide by mid-June.

The plan comes on the heels of a 41.4 percent drop in Hyundai sales

GM signs 1993 death warrant for truck plant

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — With its unions clamoring for increased job security, General Motors continues to slash its excess manufacturing capacity.

GM said last week it will close the Pontiac West truck assembly plant in Pontiac, Mich., which builds the compact S-trucks: the Chevrolet S10 and GMC S15 pickups.

GM plant begins flex planning Page 41

Production will cease at the end of calendar 1993, and the 2,000 hourly workers will be laid off, GM said. GM will try to place the 200 salaried workers at other GM facilities. The truck production will move to a car assembly plant in New Jersey, in effect reducing GM's capacity to make cars.

The most recent closing is part of GM's plan to have its U.S. assembly plants operating at 100 percent capacity by 1992. Its plants are now running at 70 to 80 percent capacity.

GM President Robert Stempel, who becomes chairman Aug. 1, has said an increase in market share to 40 percent — it was 35.6 percent in the first quarter of 1990 — will help boost capacity utilization. But last week's announced closing of Pontiac West shows that plant closings are part of the plan as well.

And that doesn't sit well with the UAW.

see GM PLANTS, page 41

Volvo revamps world sales setup; U.S. not affected yet

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — AB Volvo's plan to reorganize its national sales companies around the world may lead to a revamping of North American operations.

But though most of Volvo's wholly owned sales companies will undergo changes by Jan. 1, 1991, legal complications will hold up reorganization in the United States indefinitely.

The global reshuffling involves about 10 markets. In most countries, Volvo's national sales operations are grouped under a corporate umbrella rather than split into separate passenger-car and truck units reporting directly to Volvo Car and Volvo Truck in Sweden.

Under the proposed new setup, local car, truck and bus operations will be split into separate companies reporting to respective product group subsidiaries in Gothenburg, Sweden. The Swedish subsidiaries will assume direct operational and financial control in the field.

"This in itself does not affect North America," said a spokesman for Volvo North America Corp. "There are differences here legally and tax-wise, and we don't know if and how it might affect our corporate structure."

But if implemented, current reporting channels in North America would be disrupted. Presently, Volvo North America Corp., of which Bjorn Ahlstrom serves as president and chief executive officer, oversees Volvo Cars of North America and its president and chief executive officer, Joseph L. Nicolato.

"It's a question of ownership and reporting responsibilities," said the spokesman. "Now, the car operations are responsible to Volvo North America. Under the new setup, they would be responsible to (Volvo Car in Sweden)."

Another complicating factor in the United States is the existence of Volvo GM Heavy Truck Corp., in

see VOLVO, page 41

Mitsubishi, Volvo talk Europe venture

TOKYO — Mitsubishi Motors Corp. has agreed to a joint venture in Europe with Volvo AB, according to a report in the *Asahi Shimbum* newspaper. The report said the two agreed to produce passenger cars at Volvo's plant in Belgium starting in 1993. The annual target is 200,000 units, it said.

Mitsubishi said it has been working on a feasibility study with Volvo, as with other possible partners in Europe, but has not made any decision.

Earlier reports indicated Mitsubishi was ready to sign a deal with Fiat Auto S.p.A. But the Asahi report said Mitsubishi had dismissed the idea of teaming up with manufacturers that have products that would directly compete with Mitsubishi's small cars.

According to *Asahi*, the model intended for the Belgium plant would be based on the Mirage subcompact.

GMC bailment pool sales climbing 24% a month

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Despite softness in the RV market, GMC Truck Division has been increasing its bailment pool sales an average of 24 percent monthly during the 1990 model year.

The increase follows the record 38,000 bailment pool vehicles GMC wholesaled in calendar 1989, said Keith Ball, manager of special vehicle sales. The figure includes RV and commercial vehicles. The division doesn't break them out.

Bailment pool accounts are upfit companies that are permitted to purchase chassis from the manufacturer under special arrangements.

Dealers retailed 33,000 of those upfitted vehicles, Ball added, pointing out that there is typically a lag between wholesale and retail deliveries.

Most of GMC's gain last year was in sales of customized Sierra pickups and Suburban sport-utilities. Extra van chassis were difficult to obtain, Ball said.

This year, the division reports gains in all three product segments.

Despite its sales growth, GMC is still constrained in moving vehicles through its bailment accounts. The credit experience of those firms limits the amount they can floorplan for additional new chassis.

"The number of our bailment accounts has not grown to any significant degree," Ball said. "But they are enjoying very good profits and growth with us."

GMC did add several commercial vehicle accounts, including Jursik Truck Equipment Inc. of Highland Park, Mich.; Reading Body Works Inc. of Reading, Pa., and DeJana Truck and Utility Equipment of Kings Park, N.Y.

GMC also added Elcon Industries Inc. of Dallas. Elcon purchased van converter Sherrod Vans of Jacksonville, Fla., and Ponder, Texas. Since Sherrod was already part of GMC's pool system, the division considered Elcon an addition on the commercial side.

Elcon has a commercial upfitting operation, Harbor Inc. of Brea, Calif. It plans to bring Harbor's commercial operation into Sherrod's Florida and Texas plants and also to produce Sherrod's customized vans and other RV vehicles in its California plant.

Since GMC is heading toward buildout of its 1990 models, Elcon's commercial operations won't begin operating as part of the consignment pool system until 1991, the division said.

GMC has not begun running the new four-door Jimmy sport-utility or all-wheel-drive Safari van through its bailment system because of limited production availability.

Glaval Inc., one of GMC's largest van converters, feels the extended Safari will be an "excellent aftermarket conversion," according to William Becker, Glaval vice president of marketing, advertising and consumer relations.

Van conversion sales rebound

Upturn follows stodgy start; Dodge, Chevy inventories dive

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Van conversion sales have picked up speed during the last six weeks after a slow start in January and February.

In March, Dodge retailed 24.5 percent of the big vans in dealer inventories that came from its pool system. That was up from 22.3 percent a year ago.

During February, Dodge retailed only 18 percent of the full-sized consignment-pool vans in its dealer inventories. A year earlier, it had retailed 36 percent of them, according to factory data provided by conversion firms.

Basically, the data indicates that retail sales are growing rapidly. It also indicates that Dodge dealers had about 100 days' supply of full-sized van conversions in inventory.

Dodge still has a $1,500 guaranteed rebate to customers on full-sized van conversions and a $1,000 rebate on full-sized cargo vans. That program ends May 31.

Wholesale inventories of raw Chevrolet van chassis in converters' hands also have been dropping, indicating the strength of dealer demand.

Converters' wholesale inventory of Chevrolet chassis was 84 days at the end of January. That included a 90-day supply of full-sized van chassis and a 70-day supply of Astro van chassis, according to factory reports from converters.

By the end of March, converters' wholesale inventories had dropped to 17.7 days on the full-sized Chevrolet van chassis and 13.7 days for Astro.

Said Jim Greene, Chevrolet assistant RV manager: "We're running to catch up. The second half of the model year will be much stronger than the first half."

While Chevrolet expects to make up some of the sales falloff that occurred earlier this year, it is still anticipating a 10 percent decline in overall wholesale van shipments to converters for the 1990 model year.

Chevrolet expects to wholesale about 90,000 van chassis during the current model year compared to 100,000 a year earlier.

The division still has a $750 rebate to customers on all its full-sized and compact vans, including regular and converted units. That program runs through May 2.

General Motors Acceptance Corp. is offering a special 8.9 percent finance rate on van conversions with 60-month finance contracts compared to a 10.9 percent finance rate for all other Chevrolet products financed over a five-year period.

Meanwhile, van conversion wholesale shipments, as reported by the Recreation Vehicle Industry Association, were down for February and for the first two months of 1990.

Van shipments totaled 14,800 in February, down 17.78 percent from last year's 18,000, according to the RVIA.

Other RVIA data include:

- Two-month van conversion shipments of 28,600 were off 14.11 percent from 33,300 a year ago.
- Overall, RV shipments of 30,100 were down 14.00 percent in February from 35,000 a year ago.
- Two-month shipments of 61,000 were down 9.50 percent from 67,400 last year.

'92 Ford Club Wagon shakes up converters

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Some Ford van converters are a little apprehensive after seeing Ford's new 1992 models and hearing the automaker's plans for them at their San Diego meeting.

Ford showed its 1992 Econolines and Club Wagons, including a new factory model that some converters took to be very competitive with their own entry-level models.

The new 1992 Club Wagon features four captain's chairs; a new, larger rear sofa bed; rear air conditioner in the headliner for a nice halo effect and other trim and appointments.

Factory officials reportedly plan to produce about 30,000 of those specially trimmed Club Wagon models.

Jerome Mittman, Ford Division RV manager, declined comment on the figure.

He said Ford obviously is updating what it offers its customers and that there are groups of van conversion buyers who prefer to buy the entire conversion package from the factory.

But Mittman foresaw a "continued large market for the distinctiveness and variety that converters offer, which we cannot match."

Ford has no plans to offer unique windows, various seat trims, exterior trims or options like TVs, video tape players or running boards, which are the staple of converters' work.

"We see the majority of (full-sized van/wagon) sales in people-carrying vehicles, which will be van conversions" not Club Wagons, Mittman said.

Gary Soos, vice president of Kentron Inc. of Elkhart, Ind., a major Ford converter through its Premier Editions line, said he felt his colleagues may be overreacting to the Club Wagon.

"It's a version of the Club Wagon, which they've always built," Soos said. "It's a nicer product, yes, than they one they're building now. But the new chassis is also nicer."

RV BRIEFS

Van owners cite seats

DEARBORN, Mich. — A Ford Division survey of van conversion owners about their products shows that more than 95 percent of respondents complained about their seats rocking.

The size of that figure indicates it is an industrywide — and not just Ford converter — problem.

Some manufacturers, such as Starcraft Inc. of Goshen, Ind., have already moved to correct this by installing solid mounted front seat pedestals into their vans.

Robert Wolf, owner of Advanced Creations in Romulus, Mich., feels that solid mount pedestals that won't swivel are the only way to stop the rocking. His company is prototyping such a design.

"As long as you've got a swivel mechanism, you're going to get that play" in the seat, Wolf said.

The new 1992 model regulations, governing front impact damage in vans, will not allow seats to swivel anyway, Wolf added.

Among other things, the 1992 regulations also require three-point shoulder harnesses in the rear.

In redesigning his seats, he feels he is just getting a jump on the new regulation.

Explorer sunroof $250

Webasto Sunroofs Inc. of Rochester Hills, Mich., is supplying the pop-up sunroofs for Ford's new Explorer sport utility.

The sunroofs retail for $250, according to a Ford spokesman.

GM cuts Zimmer loose

CORDELE, Ga. — General Motors Acceptance Corp. has withdrawn its financial sanctions — as well as all leftover Chevrolet chassis — from financially troubled Zimmer Motor Vans Inc.

Thomas A. Pfingst, Chevrolet assistant fleet and RV director, confirmed industry reports that Chevrolet and GMAC had stopped doing business with Zimmer Vans as a result of the company's deteriorating financial condition.

Zimmer has been in various kinds of financial difficulty over the past couple of years.

Last July, the company emerged from Chapter 11 bankruptcy proceedings after the Bankruptcy Court for the Southern District of Florida in Pompano Beach, where parent Zimmer Corp. is headquartered, confirmed its plan for reorganization.

Zimmer has been an authorized van converter for General Motors and Ford Motor Co.

Jerome Mittman, Ford Division RV manager, said, "We know they are having some problems. We worked with them in the past to resolve their difficulties, and we are working now to resolve any concerns."

Mittman said Ford has not dropped Zimmer from its consignment pool system, but that this did not necessarily mean that Zimmer would get more chassis from Ford.

Canadian sales tax could throw monkey wrench into '91 sales

By Steve Mertl
SPECIAL CORRESPONDENT

VANCOUVER, British Columbia — A proposed new Canadian sales tax is causing confusion among Canadian automakers and could play havoc with sales at the beginning of the 1991 model year.

The auto industry has endorsed the 7 percent goods and services tax, which is scheduled to take effect next Jan. 1, because it's expected to help cut production costs and reduce retail prices.

The Big 3 Canadian automakers say the precise effect of the tax on next year's prices won't be known until next fall. Meanwhile, they're in the dark about how consumers will respond and when.

The goods and services tax is the hottest political issue in Canada, discounting the nation's endless constitutional wrangle.

The tax will replace a 13.5 percent sales tax paid by manufacturers. It will not only be lower, but it will also be levied on finished products, both Canadian-made and imported.

That should make durable goods, from cars to refrigerators, less expensive to buyers. But the catch is that the tax will be imposed on a much broader range of hitherto untaxed purchases, including books and some foods, as well as services from renting videos to consulting a lawyer.

The tax legislation passed the House of Commons this spring. It could be delayed in the opposition-dominated Senate, but the Senate doesn't have the power to reject it. Nationwide anger over the tax has plunged the Progressive Conservative government's popularity to an approval rating of 15 percent, the lowest for a federal government in Canadian polling history.

The delay means the government will probably be fighting off frontal assaults against the goods and services tax when it is expected to be explaining the tax to Canadians.

Jack Clissold, Ford of Canada's sales and marketing vice president, said Ottawa should try to cut through the confusion to explain the advantages of the tax, such as on vehicle purchases.

"As far as I'm concerned, the government hasn't done a lot to reduce the fog index," said Clissold.

Clissold and Barry Kuntz, a General Motors of Canada spokesman, said they think the tax will allow retail price cuts of about 3 percent, which they expect to pass on to consumers.

Chrysler Canada spokesman Walter McCall wouldn't quantify the potential cut, but he and Kuntz said factors such as equipment changes and upcoming contract talks with the Canadian Auto Workers could trigger price increases in the new year.

Kuntz said it's possible that Canadians, faced with such uncertainty, might rush to dealerships this fall before the new tax takes effect.

"They might say a bird in the hand is worth two in the bush," he said.

But Dennis DesRosiers, president of DesRosiers Automotive Research Inc. in Toronto, thinks the opposite response is more likely: Buyers may delay purchases until the promised price cuts show up in January, gutting the autumn new-car market.

"The threat to the industry is in the transition," he said. "It could be very, very disruptive (this fall)."

March sales edge upward; Canada steady for quarter

By Bill Vance
SPECIAL CORRESPONDENT

TORONTO — The pace of Canadian new car and truck sales picked up a little steam in March.

Total car and truck sales edged ahead 2.63 percent from a year ago, to 137,549. That brought the first quarter to a close at about the same level as a year ago. Sales through March were down just 0.29 percent, or 900 vehicles.

Among the Big 3, General Motors of Canada dropped slightly, selling 29,673 cars in March. Ford of Canada's sales slid 13.85 percent. But Chrysler Canada's 13.91 percent gain helped the Big 3 as a group show a 0.44 percent monthly rise.

Still, total year-to-date sales of North American-made cars were down 3.92 percent, to 134,905.

Chrysler gave credit for its strong showing to its Acclaim/Spirit twins, which enjoyed their strongest monthly performance since being introduced in 1988.

Among the importers, Honda scored big on both its imported and North American-built cars. Imported Honda products were up 41.55 percent, while North American Hondas were up 23.54 percent. Combined Honda units were ahead 35.17 percent.

Subaru almost doubled its sales over March 1989, up from 433 to 848. Volkswagen enjoyed a 38.38 percent increase, thanks to its pricing policy and the new Passat sedan and wagons. Total imported cars eked out a 1.99 percent gain for the month, and 4.81 percent for the year.

Truck sales also held up well for the month, rising 6.22 percent.

Among the Big 3, GM had an 11.33 percent gain while Ford and Chrysler held steady. The overall Big 3 gain was 4.63 percent.

Bill Atkinson, GM's vice president of marketing, said the company was particularly pleased with the performance of its C-K trucks, mid-sized vans, two- and four-door Blazer and Jimmy sport-utilities and Chevrolet Lumina and Pontiac Trans Sport vans.

Truck importers fared better than the North American makers by posting a 15.41 percent increase. GM again set the pace, with a 49.93 percent rise.

India's Maruti hopes to double exports

NEW DELHI, India — Maruti Udyog Ltd., the state-owned automobile manufacturer, has drawn up an ambitious program to export 10,000 vehicles by March 1991, says R.C. Bhargave, chairman and managing director.

The target is almost double last year's export of 5,100 vehicles.

Maruti, which hopes to earn $40 million in foreign exchange through exports this year, sells its products overseas only for hard currency.

Maruti also proposes to submit a project to the government to increase manufacturing capacity to about 250,000 a year.

It produced 117,400 vehicles in 1989-90, which brought total income of 12.45 billion rupees ($870 million).

You can get spirited bidding, higher prices and more cars sold when you advertise your auction in Automotive News Auction Directory.

Because the Automotive News Auction Directory is read by exactly the people who attend your auctions. In fact, Automotive News goes to virtually every dealership in the country. Why settle for a small local attendance when you can get a big regional — or even national — attendance with an ad in the Auction Directory.

Big 3 car-truck sales tumble 18% in mid-April; transplants up 20%

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

As the Big 3 automakers suffered double-digit losses in April's second 10-day sales period, nearly all transplant operations posted sales gains.

Sales of General Motors, Ford Motor Co. and Chrysler Corp. cars fell 22.46 percent from the same period last year.

Meanwhile, transplant auto sales were up 20.18 percent from the 1989 period.

The only transplant to show a sales loss was Mazda.

Total car sales in the United States for the mid-April period totalled 191,790, down 18.62 from last year.

U.S. truck sales fared no better in mid-April.

The total was 114,608 down 15.13 percent from 1989.

The combined car-truck figure of 306,398 was 17.35 percent below last year's 370,699.

Chrysler's total vehicles sales suffered the most, down 36.17 percent to 39,085 deliveries from 61,234 in 1989.

Car sales dropped 38.45 percent, and truck deliveries fell 33.93 percent.

GM was down the least of the Big 3. Its car-truck total dipped 15.86 percent — 18.92 percent for cars and 9.64 percent for trucks.

Total car-truck sales in April's second 10-day period for GM equalled 138,965, down from 165,157.

Ford's overall sales dip was 18.05 percent. Car sales were off 21.17 percent, and trucks were down 13.15 percent.

In 1989, Ford tallied 120,067 combined car-truck sales for the period, and this year racked up just 98,390.

Among the transplant operations, Honda posted the most modest gain of 6.72 percent. Still, with 12,084 deliveries for the period, Honda took top honors among the foreign producers of cars in the United States.

Car sales for Mitsubishi and Toyota showed strong gains in mid-April.

Mitsubishi's sales of cars from Diamond-Star Motors rose 63.75 percent.

And Toyota's sales of cars from its Georgetown, Ky., and Fremont, Calif., manufacturing facilities were 55.26 percent above last year's.

Nissan showed significant sales gains for its U.S.-built cars and truck.

Combined sales were up 31.52 percent over last year. Cars rose 19.80 percent, and trucks jumped 39.05 percent.

Sales of vehicles produced at the new Subaru-Isuzu Automotive plant in Lafayette, Ind., totaled 108 Subaru cars and 255 Isuzu trucks.

The only sales loser among the transplants was Mazda. In the second 10-day period of April, sales of Mazda's U.S.-built cars totaled 571 MX-6 and 626 models, down 55.67 percent from 1,288 a year ago, when only the MX-6 was built in the United States.

HYUNDAI

FROM PAGE 3

during the first quarter.

The Korean nameplate was a smash hit after its U.S. launch in 1986, peaking at 264,282 sales in 1988. But sales fell by 30.6 percent last year, as Hayden's two predecessors left the company within four months.

Hayden's address, via teleconference, was his first to the nationwide Hyundai dealer body as a whole. One of his missions will be to reposition Hyundai's image.

Shortly after taking the job, Hayden "got a definite feeling that the image was 'cheap price,' " he said in an interview. "I wanted to change that to 'quality that was affordable.' "

To that end, Hayden has introduced a plan to have consumer rebates be based on the retail price of the car. The more expensive the car, the bigger the cash-back offer. The move is expected to help dealer profits by promoting higher-priced models.

For example, 1989 and 1990 Excels that list above $10,000 will include a $1,000 rebate. An $8,000 Excel yields $850 cash back, and those under $8,000 give $500 to the buyer.

A similar plan applies to Hyundai's Sonata, where rebates on fully-loaded versions can reach $1,700. The programs will run through the first week of June.

A third Hyundai model, a sporty coupe known as the Scoupe, is expected to reach dealerships in June.

The rebate plan is part of a "featured vehicles" program that will be at the heart of Hyundai's new advertising campaign. New television, magazine and newspaper ads will promote cars with lots of options and, therefore, bigger rebates.

> This was the best communication we've had from Hyundai in over a year.
>
> **Rick Case**
> Hyundai dealer

"World Class Value" is the new theme for national and dealer association advertising. Hayden says that the old advertising tag, "Cars that make sense," hasn't been dropped for good, but it's clear he wants to emphasize value over price.

The visual and audio components of the ads will focus on content such as automatic transmission, AM/FM stereo cassette and cruise control. There will be no mention of a rebate in the ads, although the advertised price will be list price minus the rebate.

Nationally, Hyundai will increase its advertising presence, with emphasis on prime-time TV and magazines, such as *People*, *Time* and *Newsweek*. Hyundai also announced a new 50/50 co-op program for local dealer ads. The amount of Hyundai's 50 percent contribution will vary with the dealer's ability to meet sales goals.

The incentive program to stem dealer sales staff turnover will include cash and merchandise awards. They will increase as sales volume increases and term of employment lengthens. Hyundai will reveal more details in May.

Hayden told dealers that Hyundai Motor Finance Co. will be online nationally by June. The unit, which was launched earlier this year, will offer retail and floorplan finance programs.

Dealers say the finance company is vital to their and the company's health.

"It's been hard to get the kind of financing we need from banks and lending institutions, because the credit on many past buyers was weak and the repossession rate for Hyundai has been extremely high," says Bill Crowther, general manager at Augusta Hyundai in Augusta, Georgia. "This finance company is paramount to Hyundai's long-term viability.

Dealers gathered in San Francisco, Houston, Atlanta, Baltimore and Chicago to hear Hayden's message. Hayden spoke from Newport Beach, Calif., where he and another group of dealers were assembled.

"This was the best communication we've had from Hyundai in over a year," said Rick Case, a multi-franchise dealer with Hyundai stores in Houston, Atlanta and Ft. Lauderdale, Fla. "The finance company is out to help us sell cars, not make money on its own, so it's in line with our needs."

"I'm jumping in with both feet," Case added. "I'm giving my financing business to the finance company. I'll take full advantage of the co-op, and I'm going to use their retail advertising."

1991s

FROM PAGE 1

tive in the fleet market, namely GM, Ford, Chrysler, Nissan and Toyota.

According to the booklet, "The U.S. automakers have courted the fleet buyer for decades. The Japanese entries are making up for lost time with a full-fledged fleet effort."

General Motors

General Motors has revamped its full-size car lines including its large station wagons for the 1991 model year.

Chevrolet Caprice, which is already on sale, Buick Park Avenue and Oldsmobile 98 Regency and Touring Sedan have been significantly redesigned, adopting a more aerodynamic style. Each car's interior room has been expanded.

BUICK: The 1991 Buick Park Avenue sedan, available in Base and Ultra versions, is restyled inside and out. The new Park Avenue is eight inches longer, providing an additional 3.6 cubic feet of trunk space compared with 1990 versions. The car is powered by a 3.8-liter V-6 3800 engine and is due to arrive in showrooms this summer. The Electra name has been discontinued.

Also new is the redesigned eight-passenger Estate Wagon. The new rear-wheel-drive wagon blends the exterior lines of the 1991 Park Avenue and Chevrolet Caprice. The wagon is powered by a 5-liter V-8 engine, mated to a four-speed automatic transmission. Anti-lock brakes are standard.

In spring 1991, Buick will introduce the Roadmaster sedan, which will be sold as a 1992 model. Roadmaster shares the rear-wheel-drive, full-size platform used for the 1991 Chevrolet Caprice. The new Buick will be available in Base and Limited versions, and it will be powered by GM's 5.7-liter V-8 engine.

CADILLAC: Cadillac's news for 1991 is under the hood. The 4.5-liter engine, which was used in 1990 models, jumps to a 4.9-liter displacement and horsepower is boosted to 200. The engine has sequential port fuel injection and is standard in the DeVille, Fleetwood, Seville, Eldorado and Allante. The rear-drive Brougham has a 5-liter V-8.

Allante receives a second-generation speed-dependent damping suspension system as standard equipment. The new system responds more quickly to changes in vehicle speed and to changing road surface.

Allante also receives as standard equipment an improved Delco Gold Series Symphony sound system that increases power from 100 to 200 watts.

Other improvements in Cadillac's line include a Computer Command Ride suspension system in the Seville and Eldorado for better ride and handling, and a new four-speed automatic transaxle with overdrive, viscous converter clutch and electronic shift control in the DeVille and Fleetwood.

CHEVROLET: Chevrolet moved several of its 1991 products into showrooms this spring.

Caprice has been redesigned: the sedan was introduced this spring and the wagon debuts in September. Both versions are powered by a 5-liter V-8 with electronic fuel injection. Four-wheel anti-lock brakes are available on all models.

The 1991 Camaro also bowed this spring.

The 1991 Lumina APV minivan receives a revised instrument cluster and stainless steel exhaust. A roof luggage rack and rear heater/air conditioner unit have been added to the option list.

OLDSMOBILE: Oldsmobile enters the sport-utility market this fall with the Bravada. The four-door, all-wheel-drive, five-passenger sport-utility is based on the Chevrolet S-10/GMC S-15 that went on sale earlier this year. Bravada is powered by a 4.3-liter V-6 engine with electronic fuel injection, coupled to a four-speed automatic transmission. A long list of equipment is standard, including air conditioning, cruise control, variable-ratio power steering, adjustable rooftop, luggage rack, AM/FM stereo with cassette, and cast aluminum 15-inch wheels with a full-size spare.

The Oldsmobile 98 Regency and Touring Sedan are redesigned for 1991. The luxury models are longer than their predecessors and interiors provide more legroom for rear-seat passengers.

The models are powered by GM's 3800 V-6 engine equipped with sequential port fuel injection, giving them more punch than 1990 models. Engines are coupled to new computerized four-speed automatic transmissions that use electronic control modules to control shifting.

A driver's side airbag, anti-theft system, cruise control, anti-lock brakes and automatic electronically controlled air conditioning with rear passenger compartment air outlets are standard. The Regency Elite has an optional Computer Command Ride system that allows the driver to select either firm or normal ride characteristics.

PONTIAC: The 1991 Pontiac Firebird, which received some exterior styling updates, already is on sale.

Grand Prix receives a restyled front appearance for 1991 and the number of models has been scaled back. It will be sold only as the LE coupe and sedan, SE coupe and STE sedan. The turbo coupe and STE turbo options have been discontinued.

In the 6000 line, the all-wheel-drive SE and the SE wagon have been discontinued.

SATURN: GM's biggest product news for the 1991 model year is the launch of the Saturn, but the automaker continues to keep that car under wraps. No plans for fleet availability have been announced.

Buick's Roadmaster sedan goes on sale next spring as a 1992 model. The car uses the same platform as the 1991 Chevrolet Caprice.

HIDDEN IMAGE HANS G. LEHMANN

Ford Motor Co.

Ford Motor Co. will pack more power under the hood of many of the 1991 cars and trucks it introduces this fall, according to early fleet buyer information. More powerful engines will be standard on Ford's F-series trucks and the Lincoln Town Car and optional on the Thunderbird, Cougar and Ranger.

Ford will add multi-port fuel injection to the 2.5-liter High Swirl Combustion engine, although it will not be available at the beginning of the model year. Sequential injection will be added to the 3-liter V-6 in the Taurus. A four-speed electronically controlled automatic overdrive transaxle will replace the Taurus three-speed transaxle, except on SHO. In 1991, a manual transmission will be the only gearbox available on the SHO.

Ford will add an optional 5-liter, high-output V-8 to Thunderbird base and LX models. A "maintenance monitor" will be optional on the Thunderbird LX and Super Coupe. The standard powertrain on the Thunderbird base and LX again will be the 3.8-liter V-6 with four-speed automatic overdrive. The Super Coupe will retain the supercharged and intercooled 3.8-liter V-6 with sequential electronic fuel injection and five-speed manual overdrive.

FORD DIVISION: Tempo will get a minor facelift, presumably a new grille. To produce cleaner engine firing and increased performance, Ford will incorporate a twin-spark-plug design in its 2.3-liter, four-cylinder engine for the Mustang LX. Mustang LX and GT models equipped with the 5-liter V-8 engine will have 16-inch, five-spoke aluminum wheels.

A new Festiva GL model will replace the L Plus and LX, with a restructured equipment level that Ford hopes will appeal to small-car buyers. The GL will have a new monochromatic paint scheme, painted wheels, a standard rear wiper and rear cargo cover and a standard right-hand manual outside mirror.

LINCOLN-MERCURY: The Cougar again will be offered in LS and XR7 verions. The 5-liter high-output V-8 with sequential multi-port fuel injection and electronic engine controls will continue as standard on the XR7 and optional on the LS.

Grand Marquis, which will be offered in both GS and LS sedans, will get a minor facelift, including a new grille and aluminum wheel paint treatment.

Sable, like Taurus, will receive a sequential multi-port electronic fuel injected 3-liter V-6. A new electronically controlled four-speed automatic transaxle will continue as standard on all Sable models. Anti-lock brakes will be optional on Sable wagon models in 1991 for the first time.

The Tracer, expected to be introduced in June as a 1991 model, will stand pat for the regular fall intro season. The four-door notchback and wagon will be powered by a 1.9-liter, four-cylinder engine with multi-port electronic fuel injection. The Tracer LTS sedan will have a 1.8-liter four with double overhead camshaft and electronic fuel injection.

FORD TRUCKS: Aerostar will have a memory lock for the sliding door, upgrades to the 4-liter engine and offer a trailer-towing wiring harness package.

The Bronco's changes include an optional 5-liter engine with electronic four-speed automatic overdrive transmission. Its touch-drive electric shift is fitted to four-wheel-drive models equipped with the 5-liter powertrain. Bronco also will have better corrosion protection with two-sided galvanized steel hood, tailgate, dash panel and doors.

Oldsmobile will enter the sport-utility market this fall with the all-wheel-drive Bravada, which is based on the Chevrolet S-10/GMC S-15.

In the E-250 Club Wagon, Ford will add power door locks and a new cooling fan and shroud on the 5.8-liter. The Econoline Van and cutaway series will offer a E-250 Heavy Duty Van. The E-150, E-250 and E-350 vans will also be available. Ford will drop its short-wheelbase E-150 van.

Changes to the full-sized vans will include revised power door locks, a revised cooling fan and shroud for the 5.8-liter and an 11,500-pound gross vehicle weight standard on the RV cutaways with wheelbases of 158 and 176 inches.

Chrysler Corp.

Chrysler Corp. in the 1991 model year will introduce a 3.8-liter version of its V-6 engine in top-of-the-line models.

Previously, Chrysler's V-6 was available only as a 3.3-liter.

The 3.8-liter V-6 will be standard in the Chrysler Imperial and Chrysler New Yorker Fifth Avenue, according to information supplied to fleet buyers. The engine will be optional in the Chrysler New Yorker series and the Dodge Dynasty LE.

The 151-horsepower engine will be teamed with Chrysler's four-speed automatic transmission.

Also in the 1991 model year, Chrysler will introduce a New Yorker Grand Touring Sedan. The GTS model, originally scheduled to bow in the 1990 model year, has added performance and handling features.

have demonstrated the engine's ability to start quickly at down to -20 degrees Celsius.

The 90-horsepower engine is a modified version of a turbocharged 1.9-liter direct-injection diesel of Volkswagen design.

"This project wouldn't have come as far or as fast without the cooperation of Volkswagen," said Hellman. "The original contract did not specify that the engine be installed in a car. And the FEV modified engine is a direct-injection diesel prototype for a passenger-car."

An FEV representative said the methanol engine would probably cost slightly more than a diesel engine. The test engine has been installed in a VW Jetta model.

"We were given the contract to demonstrate the base technology," says Gary Rogers, president of FEV of America. "And we've done that. But there's still a lot of optimization to be done with things like injection timing control."

Early development tailpipe-emissions results were presented last week at the 11th International Vienna Combustion Engine Symposium in a paper authored by FEV Motorentechnik and members of the Volkswagen AG Research Department.

Running the EPA's federal test procedure, the methanol engine produced low numbers. They are 0.18 grams per mile for hydrocarbons, 0.7 grams per mile for carbon monoxide and 0.37 grams per mile for nitrogen oxides. That compares to the government's standards of 0.41 grams per mile for hydrocarbons, 3.4 grams per mile for carbon monoxide and 1.0 gram per mile for passenger vehicles.

"It's important to keep in mind that these are low-mileage results," said Hellman at the EPA.

FEV's design incorporates a small steel cylinder about the size of a ball-point pen barrel that sticks into a small cup cast into the top of the piston along with a multi-hole fuel injector. The steel cylinder's walls are filled with small holes. Inside the steel cylinder is an electrically heated element similar to a diesel engine's glow plug.

Fuel squirted through the side of the cylinder by the injector greatly increases the density of the fuel charge inside. The hot element is activated. The steel cylinder then acts like a pre-chamber to promote combustion. The glow plug fires the dense charge inside the cylinder. The flame squirts from the holes in the cylinder igniting the slightly less dense charge in the combustion chamber cup. And then the flame propagates throughout the cylinder.

This provides the ability to fire extremely lean charges of fuel in the combustion chamber without the additional cost and complexity of a pre-chamber cast into the cylinder head.

The program is a joint effort conducted with FEV's parent company, FEV Motorentechnik GmbH & Co. KG of Aachen, West Germany, along with Volkswagen AG.

Emissions triumph claimed for Aussie 2-stroke engine

By Pedr Davis
SPECIAL CORRESPONDENT

SYDNEY, Australia — Engineers at Ralph Sarich's Orbital Engine Co. claim to have smashed U.S. emissions standards.

Emissions levels achieved by their three-cylinder, two-cycle engine are more than a decade ahead of the proposed U.S. schedule, the engineers say.

They say the levels they attained contradict claims by automakers that the proposed U.S. standards are unrealistic.

Tests completed by Orbital Engine Co., a wholly owned subsidiary of Sarich Technologies Ltd., have already met the stringent emission standards proposed for 2004 and beyond, the company says.

Figures released April 19 by Ralph Sarich show that hydrocarbon levels achieved by Orbital Engine Co. were 0.11 grams per mile and nitrous oxide emissions were 0.29 gpm. Both are below the levels proposed in Congress for model year 2003 or 2004.

The vehicle used in the tests also demonstrated a 30 percent improvement in fuel consumption over a conventional engine of comparable power, Sarich says.

Orbital will not identify the model used in the tests, except to say it was a 2,000-pound car about the size of a Mazda 323.

Sarich Technologies has licensing agreements with Ford Motor Co. and General Motors along with the two biggest producers of marine engines, Outboard Marine (Johnson and Evinrude) and Brunswick Corp. (Mercury Marine).

Other agreements with auto companies around the world are being negotiated.

Manufacturers that have agreements are doing pre-production development work but will not reveal when the engine will be released commercially.

Orbital Engine Co. expects to begin operating its own plant in Tecumseh, Mich., by 1992, with automotive engine production scheduled to begin sometime in 1993.

TAILPIPE EMISSIONS
(in grams per mile)

	HC	NOx	CO
FEV claim	.18	.37	.74
Orbital claim	.11	.29	.24
Current limit	.41	1.0	3.4
'92 or '93 limit	.25	.40	3.4
'03 or '04 limit	.12	.20	3.4

1991s

FROM PAGE 42

In 1991, the Mitsubishi-built 3-liter V-6 will be dropped from the Chrysler New Yorker Landau and New Yorker Salon. The standard engine will be Chrysler's own 3.3-liter V-6.

The company will revive the "America" name in the 1991 model year and will use it on Dodge Shadow/Plymouth Sundance price leaders. The America tag was used on Dodge Omni/Plymouth Horizon subcompacts and Dodge Aries/Plymouth Reliant compacts.

A Dodge Shadow convertible also will bow in the 1991 model year.

The Dodge Stealth sports coupe, imported from Mitsubishi Motors Corp., will bow in the 1991 model year in four versions. The base model will have a standard 3-liter 12-valve V-6 engine. The ES and RT models will have a 3-liter, double-overhead-camshaft, 24-valve V-6 engine as standard. The RT Turbo model will be equipped with a 3-liter 24-valve twin-turbo V-6 with double-overhead camshaft, multi-point fuel injection and air-to-water intercooling.

A five-speed manual transmission is standard. Automatic transmission will be optional on all models except the RT Turbo. All models will be front-wheel-drive, except the RT Turbo which will be all-wheel-drive.

Chrysler also will restyle its minivans, inside and out. The Plymouth Voyager and Dodge Caravan again will be offered in short-wheelbase and long-wheelbase versions. All-wheel-drive versions will be available with Chrysler's 3.3-liter V-6.

The Dodge Dakota pickup will be available with a 5.2-liter V-8 engine. Previously, the pickup was offered with a four- or six-cylinder engine. A new 4x4 extended-cab model will be added to the Dakota lineup.

In 1991, the Jeep Cherokee Briarwood will replace the Jeep Wagoneer Limited. Introduced in the 1984 model year, the Wagoneer Limited is an upscale version of the Cherokee. The Cherokee Briarwood will assume that spot in the lineup.

Nissan, Toyota

Relative newcomers to the fleet business, Nissan and Toyota have set up strong positions with their 1991 model offerings.

Among the new or facelifted models are entry-level cars, sports cars and two new sport-utility vehicles.

NISSAN: Nissan comes off three strong years where nearly all of its products underwent complete change, and in 1991 the company focuses on its entry-level Sentra.

Although the subcompact sits on the same 95.7-inch wheelbase as its predecessor, its overall length increases two inches. The standard engine is a 1.6-liter four-cylinder with output bumped slightly to 110 horsepower.

The Sentra is available in two-door and four-door configurations, and in three trim levels — standard, XE and GXE. Only the four-door is available in up-line GXE trim.

A two-door Sentra Sport is also available in 1991. To live up to its name, Nissan gives it a 2-liter, 16-valve four-cylinder engine capable of producing 144-horsepower.

Minor changes round out the remaining models for Nissan, except for the company's Axxess minivan. The compact Stanza — redesigned for the 1990 model year — receives electric outside mirrors in 1991.

As for the Axxess — a three-box hybrid that replaced the Stanza wagon — sales have been slow enough since its April 1989 introduction to prompt Nissan to discontinue sales in the United States. Last year just 9,776 were sold, and this calendar year to date only 2,268 have been delivered.

TOYOTA: A "luxury" edition of the entry-level Tercel four-door sedan is scheduled for an October 1990 debut. Additionally, the line will be powered by a more potent twin-cam, 16-valve, four-cylinder engine. The powerplant produces 85 horsepower.

Chrysler eyes Trenton plant for new V-6

HIGHLAND Park, Mich. — Chrysler Corp. has applied for a 12-year tax abatement in connection with a possible $148-million addition to its Trenton, Mich., engine plant.

Chrysler said Trenton is the preferred site for the project, which could add about 550 jobs to the current workforce of 2,700.

The automaker is expected to use the plant addition to produce a new 3.5-liter, 24-valve V-6 engine and a revamped transmission for its new mid-sized and luxury cars.

Those cars are slated to be built in the mid-1990s at Bramalea, Ontario.

The trade newspaper *Metalworking News* reported that Chrysler is studying bids from tooling firms for equipment to make the four-speed, electronically controlled automatic at its Kokomo, Ind., plant.

INCENTIVES: *Chrysler adds no-interest financing, Hyundai cash pegged to sticker price*

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Corp., in an effort to regain lost sales, is offering the lowest financing rates in the industry, including free financing for up to two years on some 1989 and 1990 vehicles.

Hyundai Motor America revised its customer incentive program and now bases rebates on the manufacturer's suggested retail price.

In addition to the no-interest loans, Chrysler is offering annual percentage rates of 1.9 percent for loans of 25 to 36 months; 2.9 percent for 37 to 48 months; and 4.9 percent for 49 to 60 month.. Its previous finance rates were 2.9 percent, 6.9 percent, 7.9 percent and 9.9 percent.

The vehicles covered under the new program are: 1989 and 1990 Chrysler LeBaron coupe; Plymouth Acclaim and Sundance; Dodge Daytona, Spirit and Shadow; and Eagle Premier; and 1990 LeBaron sedan and Dodge Monaco.

The finance rate on the 1989 and 1990 Jeep Cherokee and Jeep Wagoneer Limited has been reduced to zero percent for up to 24 months. Cherokee and Wagoneer finance rates for other contracts are 6.9 percent for 36 months; 7.9 percent for 48 months; and 9.9 percent for 60 months.

Retail cash incentives of $500 to $2,500 on various models are available as an alternative to the cut-rate financing.

Hyundai's rebates to customers on 1989 and 1990 Excels are $500 on cars with sticker prices under $8,000; $850 on cars with stickers of $8,000 to $9,999; and $1,000 on cars with stickers of $10,000 or more.

On 1989 and 1990 Sonatas, the rebates are $700 on cars with sticker prices under $12,000; $1,000 on cars with stickers of $12,000 to $14,499; and $1,700 on cars with stickers of $14,500 or more.

Hyundai dealers receive cash incentives on 1989 and 1990 Excels if they meet or exceed their quotas. The rebate is $200 per car, retroactive to the first sale. Hyundai's customer and dealer programs expire June 5.

Accounting change hikes Daimler profit

FRANKFURT, West Germany — Daimler-Benz A.G. posted a sharp increase in net profits in 1989, but the gain was due entirely to a one-time accounting adjustment.

In effect, the West German group finished with a net result unchanged from the 1.7 billion marks ($1.01 billion) earned in 1988.

Because of a 5.1 billion mark ($3 billion) addition from refiguring pension liabilities and inventories, the corporation's 1989 net profit was 6.8 billion marks ($4 billion).

The change sheds one of Daimler's conservative, West German-style accounting practices as the company prepares for listing on the London, Tokyo and New York stock exchanges.

Earlier this year, Daimler said group revenues in 1939 increased 4 percent to 76.57 billion marks ($45.6 billion).

Earnings for its various subsidiaries, including the Mercedes-Benz A.G. unit that oversees passenger-car and truck operations, were not disclosed. Last year, Daimler split into separate operating units.

The results reflect hard times in the automotive operations. Mercedes' sales fell last year in both of its two biggest markets, West Germany and the United States.

GM triples warranty on repair engines

DETROIT. — General Motors has extended the limited warranty on its replacement engines to 36 months/50,000 miles, more than tripling the previous 12-month/12,000-mile coverage for dealer installations.

The new warranty covers all new and remanufactured GM Goodwrench engines used in car and light-duty (Series 10 through 30) truck applications, according to Frank Pardo, marketing manager of GM Parts.

The warranty will be honored nationwide through the GM dealer network, whether the engine is installed by a GM dealer or sold over the counter.

All costs will be covered, including those for parts and labor, to repair or replace an engine found to be defective due to material or workmanship.

PRODUCTION

Car output running 23% below 1989

By Arlena Sawyers and Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTERS

U.S. automakers scheduled 138,708 cars last week, 24.58 percent above the previous week but 14.86 percent below the year-ago week.

That brings this year's car production to 1,937,275 units, a 23.75 percent decline from 1989.

Truck assembly was scheduled at 91,902, 27.77 percent more than the previous week and 2.43 percent more than the year-ago week. Year-to-date truck output is 1,272,183, down 16.51 percent from the 1989 total at this time.

Companies split last week's scheduled production as follows: General Motors, 42.62 percent; Ford Motor Co., 26.52 percent; Chrysler Corp., 11.25 percent; Honda of America Manufacturing Inc., 6.45 percent; New United Motor Manufacturing Inc., 3.60 percent; Toyota Motor Manufacturing U.S.A. Inc., 3.24 percent; Mazda Motor Manufacturing (USA) Corp., 2.80 percent; Diamond-Star Motors Corp., 2.06 percent; Nissan Motor Manufacturing Corp. U.S.A., 1.14 percent; Subaru-Isuzu Automotive, 0.32.

GM's Buick City plant in Flint, Mich., worked Saturday overtime last week. Friday overtime was scheduled at GM's Janesville, Wis., facility, which operates on a four-day work week.

GM's Fairfax plant in Kansas City, Kan., shut down for one week because of a parts shortage, and its Arlington, Texas, plant went down Friday for conversion to the 1991 Chevrolet Caprice. Fairfax is expected to resume output today; Arlington, in late June.

Ford scheduled Saturday overtime at its Louisville, Ky., truck plant. Daily overtime was scheduled at Ford's car facilities in Wixom and Wayne, Mich.; Kansas City, Mo.; St. Paul, Minn.; Lorain, Ohio; Louisville; and St. Louis.

Canada reports car, truck gains

Canadian makers scheduled 24,060 cars last week, 21.22 percent above the previous week and 18.69 percent above the year-ago week.

So far this year, 328,940 cars have been assembled, 2.71 percent below last year's tally.

Truckmakers' target of 19,482 units was 6.13 percent above the previous week but 7.33 percent below the year-ago week.

To date, 1990 truck output is 301,994 units, 11.63 percent below the year-ago total.

Workers at GM's manufacturing complex in Oshawa, Ontario, walked off the job last Tuesday and Wednesday to protest the suspension of a Canadian Auto Workers district committeeman.

The 3,800 workers at the Oshawa plant that builds the Chevrolet Lumina were off the job part of Tuesday and all day Wednesday. Some production at the rest of the complex, which also builds Buick Regals and C/K pickup trucks was shut down.

Workers were back on the job Thursday morning.

Delays rain on new Chevy, Dodge ragtops

Beretta on hold; 400 Shadows set for July, August

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

General Motors and Chrysler Corp. have missed their targets of a spring launch for compact convertibles. The Chevrolet Beretta and Dodge Shadow ragtops will miss the peak 1990 open-air selling season.

The Beretta convertible is "on hold indefinitely," a Chevrolet spokesman said. The spring introduction was halted because of conversion difficulties. "So far the vehicle has failed to meet our quality targets," a Chevrolet spokesman said.

Lotus Elan delayed by supplier troubles, Page 49

Three specially modified Beretta convertibles are still scheduled to pace the Indianapolis 500 on May 27, including one driven by Chevrolet General Manager J.C. "Jim" Perkins.

The Chevrolet spokesman said the delay of the launch won't kill the marketing advantages of Indy.

"The rub-off is on the Beretta itself and to Chevrolet in a broader sense," the spokesman said.

Chrysler will begin production of the Dodge Shadow convertible in June. An estimated 400 units of the 1991 model will reach dealers in late July and August, the company said.

Dodge division spokesman Michael Aberlich said Chrysler had planned to begin building the car in May and that the model has always been designated a 1991 model in product plans.

But dealers said an earlier spring launch had been anticipated, and Chrysler executives in interviews and in written press material had identified the convertible as a 1990 model.

Chrysler denied any manufacturing problems, but dealers said conversion troubles have hampered the Shadow ragtop launch.

ASC Inc., the Southgate, Mich., engineering and conversion company, is converting the Shadow in a new plant built in Toluca, Mexico. A small number of Shadows were once built in Toluca, but the car is now built only in the Detroit suburb of Sterling Heights, Mich.

C&C Inc., based in Brighton, Mich., is converting Beretta coupes manufactured in Wilmington, Del., in a renovated plant in Bridgeport, N.J.

"We don't launch cars today of any kind if the quality is not right," said C&C President David Draper. "Our plant is still working building pilots. Everybody wants to be at a comfort level that says the car is ready to launch. It will be Chevrolet's decision when they launch."

Draper would not detail product difficulties but noted that convertible conversions have unique manufacturing problems. Removing a coupe's roof makes the body much less rigid, so the converter must reinforce the body. Asked if the Beretta ragtop might be struck from product plans, the Chevrolet spokesman said, "That decision hasn't been made."

Several Chevrolet and Dodge

Chevrolet's Jim Perkins can drive a ragtop Beretta at Indy, but he can't sell any this season. The project is on hold.

Anti-lock brakes begin their boom time

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Anti-lock brake systems for passenger cars, trucks and minivans are on the rise as the balance between cost and technology tips in favor of bringing ABS down to the middle market.

Among Detroit's Big 3, General Motors led the ABS way on its 1989 products, according to figures compiled for the *Automotive News Market Data Book*, which will be published May 30.

Industry spokesmen predict that within 10 years ABS will be commonplace on new vehicles.

Dealers say the technology all but sells itself.

"It's easy for us to sell ABS," says Ken Scott, general manager of Ron Postma Chevrolet-Geo in Chicago. "It's one of the most innovative factors on cars today, and customers are beginning to understand its importance."

Says Mike Maresca, a salesman at Autoland Lincoln-Mercury-Mazda in Toms River, N.J.: "Most people ask for it by name, and we will use anything we can in this down market to sell cars. Women are coming in and asking for it because the word's on the street how good it is."

Paul Preuss of Ford Motor Co. predicts: "Eventually, someday you will see ABS thoughout Ford's lineup — as you will see it being used by other manufacturers."

Preuss, manager of product and technology public

U.S. probe may hamper Chrysler sale

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Corp. says a federal investigation of its defense electronics subsidiary could hamper Chrysler's ability to sell it.

Federal investigators are looking into allegations of improper pricing and billing by Chrysler's Electrospace Systems Inc., according to a Chrysler filing with the Securities and Exchange Commission.

In December, Chrysler offered its aerospace and defense units for sale to raise cash for Chrysler's core automotive business. The company sold Gulfstream Aerospace for $825 million in March.

But Chrysler has been unable to find buyers for the two remaining units: Electrospace Systems, based in Richardson, Texas, and Chrysler Technologies Airborne Systems Inc., based in Waco, Texas.

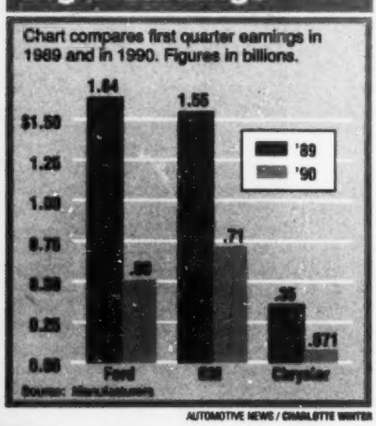
Big 3 earnings



AUTOMOTIVE NEWS / CHARLOTTE WINTER

1st quarter rebates slash Big 3 profits

By Charles M. Thomas, Mary Connelly and Laura Clark
AUTOMOTIVE NEWS STAFF REPORTERS

DETROIT — In an already sluggish market, the Big 3 domestic automakers slashed production in the first quarter of 1990, then paid dearly through costly incentives to reduce dealer stocks.

As a result, inventories at the end of March were down nearly 15 percent from December highs.

But to thin inventories to acceptable levels, earnings at Ford, General Motors and Chrysler suffered.

Combined profits at the Big 3 automakers were $1.3 billion for the first quarter 1989, down 64 percent from $3.5 billion for the first quarter a year earlier. Sales for the three U.S. automakers totaled $60.6 billion, down from $67.8 billion in the 1989 first quarter.

General Motors profits were down 54 percent, Ford's skidded 69 percent, and Chrysler profits sagged 80 percent in the first quarter 1990 for the same period a year ago.

The surprise came from Chrysler Corp., which sneaked by the first quarter with a slim profit.

Analysts, who had predicted the company would lose money or at best, break-even, said the profit was due to the company's cost-cutting efforts and earnings from its financial subsidiary.

Chrysler Corp.

Chrysler reported quarterly net earnings of $71 million. Most of the earnings flowed from its financial subsidiary. Automotive operations contributed about $5 million of the profit.

First quarter results were down 80 percent from the first three months of 1989 when the company earned $351 million. Wall Street analysts had expected Chrysler to only break even. Chrysler, in the final quarter of 1989, reported a net loss of $664 million, including a $577 million one-time charge due to plant closings and related costs.

Chrysler's common stock, which had reached a 52-week low of $14.50 on April 30,

GM touts quality gains

Ads use employees to help convince public

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors has kicked off a massive campaign to convince the public that its product quality has greatly improved.

The "Putting Quality on the Road" campaign broke in 25 newspapers nationwide last week. A four-page, black-and-white spread highlights such things as engines and transmissions. Independent studies are quoted to substantiate claims.

Similar magazine ads and television spots featuring workers and managers discussing improved quality will follow.

Shirley Young, GM vice president for consumer market development, spearheaded the effort because the public's perception of GM's product quality dramatically lags actual quality improvements GM has made. "That perception has been a barrier to improving market share," she said. GM's car market share dropped to 34.83 percent in 1989 from 46.41 in 1980.

GM also launched a massive internal promotion aimed at making its employees goodwill ambassadors. In a videotape viewed by thousands of GM employees last week and a newsletter sent to homes of employees and retirees, an upbeat GM President Robert Stempel, who becomes chairman Aug. 1, congratulates workers for their efforts in boosting GM's product quality in the past five years. The content arms them with facts — similar to those in the ads — to prove GM's improved quality.

In the video, Stempel converses with workers at the Willow Run, Mich., assembly plant. Then he turns to the camera. "Learn the facts about GM quality," Stempel says in his commanding style. "Then spread the good word."

GM plans a similar message to employees of its 6,000 suppliers and 10,000 dealers.

Young said the effort will last at least three to five years. She wouldn't disclose the cost, but *Advertising Age*, a sister trade publication to *Automotive News*, estimates it at $40 million this year.

The GM campaign shares many elements with Ford Motor Co.'s "Quality is Job One" ads, which use employees to tout products.

A four-page newspaper spread kicked off GM's new ad campaign.

Chrysler big loser in otherwise solid late-April report

Peter Brown
EDITOR

Chrysler Corp. continued its 1990 sales plunge in late April, pulling down an otherwise improved 10-day selling period for domestic-built vehicles.

Industrywide, U.S.-built car sales rose 0.64 percent and domestic light-truck sales rose 7.84 percent for the period, boosting total vehicle sales up 3.17 percent over a mediocre 10 days last April.

The slight month-end improvement softened the rear edge of a slow April, which finished down 9.32 percent from April 1989.

Chrysler was the big loser:

- For the 10-day period, down 33.76 percent in its U.S.-built cars and down 16.51 percent in its U.S.-built trucks.
- For April, down 36.60 percent in cars and 26.40 percent in trucks.
- Toyota Motor Sales U.S.A. and American Honda Motor Co. each outsold Chrysler in cars in April.

Chrysler no longer produces the subcompact Omni and Horizon models, and most current products were down.

A Chrysler spokesman said the company squeezed its inventories too low after heavy January sales spurred by special incentives, including the first-ever rebates on Chrysler's dominant minivans.

Like Ford Motor Co. and General Motors, Chrysler slashed production in the first quarter.

Chrysler's sales were also hurt as

GM plant manager retires; 9 go, too

By Greg Bowens
SPECIAL CORRESPONDENT

DETROIT — General Motors' first female plant manager in the United States retired abruptly in late April. Nine of her staff members left at the same time.

Patricia Carrigan, 61, is a clinical psychologist heralded by industry analysts and labor for her management style at a components plant in Bay City, Mich.

Mystery shrouds her departure and what has been reported as firings or forced resignations for the nine staff members.

"She has retired from GM and we have not replaced Patricia Carrigan," said Darwin E. Allen, director of media relations for the Chevrolet-Pontiac-GM of Canada Group, which oversees the plant. "Beyond that, I have no comment."

Carrigan did not return calls from *Automotive News*.

Tom Peters, co-author of *In Search of Excellence*, had called the GM plant manager and her work at the Bay City, Mich., plant an example of leadership and productivity in America." She was featured on a 1988 television special hosted by Peters about effective management.

Carrigan joined GM in 1973 after leaving Bendix Corp. In 1982, she became plant manager of the Lakewood, Ga., plant. She moved in 1985 to Bay City, where local union officials credit her with saving it from the wrecking ball. She was the only plant manager known to have a doctorate in psychology.

Buick City manager retires

FLINT, Mich. — Nelson B. Gonzalez, manager of General Motors' highly-touted Buick City plant in Flint, Mich., has retired suddenly.

In a memo to Buick City workers, GM said Gonzalez, 53, took early retirement "to pursue other personal goals."

Gonzalez

He will consult for Vemco Inc., a firm that makes exterior body parts.

During Gonazalez' 18-month tenure as manager, Buick City was named the highest quality U.S. assembly plant by J.D. Power & Associates of Agoura Hills, Calif. Three years earlier, it ranked in the bottom quarter of similar surveys. Its Buick LeSabre was named best-built U.S. car in a 1989 survey.

GM said his retirement is not related to the abrupt retirement of Patricia Carrigan.

Prices of the unwanted, hand-built limos are said to be "open to discussion." The cars, which look almost new, have been driven only by official chauffeurs.

Czechs unload Party limos

By Knut Moberg
STAFF CORRESPONDENT

PRAGUE, Czechoslovakia — Authorities in Czechoslovakia want to sell all the Tatra 613 limousines which were once used by ousted Communist Party officials.

Most Czech leaders prefer the more egalitarian Skodas these days, though the new president uses a Renault, a gift of France.

Czechoslovakia's rulers do not want to be associated with a bad memory of the past — black Tatras with curtained windows carrying party officials at high speed along Prague's city streets.

The cars were handmade at the Tatra Truck Factory for government use only, although a limited number were exported "to party members in friendly nations."

The 4,000-pound car has a rear-mounted, air-cooled V-8 engine producing 168 horsepower.

The cars now for sale appear to have been well maintained and have been driven only by official chauffeurs. A 10- or 20-year old Tatra looks almost new.

Fuji buyout places Subaru on level U.S. playing field

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — With last week's announced buyout of Subaru of America Inc., the last major independent importer in the United States will be brought in step with the rest of the industry, Chairman Harvey Lamm said last week.

The deal will make Fuji Heavy Industries Inc., which already owns 49.6 percent of Subaru, a fully committed player in the U.S. market, Lamm said. And because Fuji and Subaru won't have competing interests, dealers will see more stability in the company, he predicted.

A committe of Subaru directors recommended that Subaru be taken over by Tokyo-based Fuji, which makes Subaru vehicles.

The deal will pay shareholders of the nation's only publicly traded importer at least $8.50 per share. Subaru management refused to accept Fuji's offer of $6 per share in January. At $8.50 per share, the present offer is worth around $208 million.

If the deal is affirmed by shareholders, Fuji will join other Japanese manufacturers in owning a comprehensive operation in the United States, including its own marketing, importing and distribution. Fuji also has a 51 percent stake in Subaru-Isuzu Automotive Inc., an assembly plant in Lafayette, Ind.

Fuji President Toshihiro Tajima said Subaru staff and executives can remain American, but "communication between all divisions of our business would be improved."

A shareholder vote is expected some time in the third quarter.

Lamm said he expects no profound overnight changes following the proposed takeover, pointing out that as its largest shareholder, Fuji has effectively had control of Subaru for more than a dozen years.

Subaru officials have complained privately in the past that in pursuit of volume, Fuji forced Subaru to accept too many cars, which then had to be deeply discounted. The high cost of rebates, nearly $100 million a year in 1987 and in 1988, helped drive Subaru in the red. The company lost nearly $130 million from fiscal 1987 through fiscal 1989.

In turn, Fuji was footing more and more of the bills at Subaru, including about $75 million for U.S. sales and marketing programs in the last three years and a critical loan guarantee that helped Subaru secure a $250 million revolving credit agreement with a group of banks last fall.

Nevertheless, Subaru remained independent.

Also, Lamm said that Fuji's major Japanese shareholders, including the Industrial Bank of Japan and Nissan Motor Co., don't like the fact that as a publicly held company, Subaru is obliged to disclose its financial dirty laundry.

Nissan, which owns 4.5 percent of Fuji, recently placed one of its executives, Isamu Kawai, as Fuji's president.

Taking Subaru private helps Fuji "get better support from their key shareholders," Lamm said.

Subaru's sales in 1989 were 136,112, compared with a high of 179,100 in 1986. As earnings dropped, Subaru's stock also fell, from $37.75 per share in June 1986 to a recent price of around $6.

When the $8.50-per-share deal was announced last Thursday, Subaru stock jumped $1.625 to $8 per share.

Fuji's original $6 offer was sweetened with an estimated $2.50 per share expected to be raised by selling off Subaru's lease portfolio, which is in effect a package of interest-bearing IOUs presently held by its Subaru Financial Services subsidiary.

The additional $2.50 per share works out to about $128 million to be distributed to shareholders. Since Fuji owns 49.6 percent of Subaru, Fuji will also receive nearly half of the $128 million.

Marvin Riesenbach, Subaru chief financial officer, said the net effect of the $8.50 proposal is Fuji is providing the additional $2.50, since it's coming out of assets Fuji would have purchased anyway.

"It's just a question of which pocket they were most comfortable paying it from," Riesenbach said.

In announcing the merger, the companies also revealed that a group of small shareholders had sued Subaru, claiming shareholders would suffer if the deal went through at $6 per share. The litigation was settled in light of the $8.50 offer, the companies said.

Hyundai auto workers stage solidarity strike

By Oles Gadacz
STAFF CORRESPONDENT

SEOUL, South Korea — Hyundai Motor workers at the company's main plant in Ulsan walked off the job last Monday. The 15,000 workers declared a week-long sympathy strike for striking workers at the adjoining shipyard of Hyundai Heavy Industries.

Significantly, the walkout was unrelated to wages, working conditions or contract negotiations in progress at the auto plant. Rather, it was an expression of solidarity with the 20,000 workers at Hyundai Heavy Industries who have been demanding the release from jail of their union leaders. The leaders were charged and imprisoned last year following a four-month strike.

A majority of the 15,000 striking Hyundai Motor workers agreed at a meeting in Ulsan Friday to return to work today (May 7).

The situation at the adjoining Hyundai Heavy Industries shipyard remained tense. Most of the strikers vowed to continue the stoppage in defiance of all attempts to persuade them to return to work.

Hyundai Heavy Industries workers had barricaded themselves in the shipyard, but a few days later, on April 28, there was a dramatic dawn raid that saw the deployment of police by air, sea and ground to evict the workers from the shipyard.

Random street violence continued between groups of striking shipyard workers and police in Ulsan over the weekend. By some accounts, parts of the town looked like a war zone.

In his statement made after the police action, Chung Se-Yung, chairman of the Hyundai Group and Hyundai Motor, reasserted his position that the shipyard strike was illegal and that there would be no compromise. Charges against the jailed union leaders would not be dropped, he said.

Meanwhile, a number of Hyundai Motor showrooms in Seoul were attacked by stone-throwing demonstrators who smashed plate glass windows in protest over police action at the shipyard.

e government's hardline response is an indication of the deep concern about the Hyundai Heavy Industries strike's ripple effect throughout Korean industry.

But sending in police to resolve the issue and to set up an example of the government's determination to quash illegal labor disputes may have provoked more strikes, such as the one by the Hyundai Motor workers.

N.Y. fights service contract gouging

By Helen Kahn
SENIOR CORRESPONDENT

Price gouging on manufacturer service contracts sold by New York car dealers cost consumers more than $25 million in overcharges last year, state Attorney General Robert Abrams charged last week.

Abrams says some 175,000 New York customers, or half of those who bought automaker service contracts in 1989, were overcharged. He estimates that two million customers nationwide were excessively billed $300 million.

According to a state study, overpricing exists when a customer pays more than the manufacturer's suggested retail price for a contract. When there is no suggested price, the study says it is gouging when customers pay more than twice the dealer's cost.

Norma Sharp, director of the New York Auto Dealers Association, said the group will oppose legislation to require New York dealers to provide customers with price data for service contracts. Abrams is supporting the measure.

"In all instances, a dealer is free to sell his product for any price the market will bear," Sharp said. She added that service contract prices can be negotiated and that the contracts may be sold below or above the suggested price.

It is not illegal to charge more than the suggested price.

Data for the New York study came from General Motors, Ford Motor Co., Chrysler Corp. and Toyota Motor Sales U.S.A. Inc. All but Toyota have suggested prices. The four companies provided pricing data for over 1,700 contracts.

Because the suggested price is often twice the dealer's wholesale price, there is already a dealer profit built in. But Abrams found markups five and six times higher than the suggested price.

Abrams cites two instances of "rampant price gouging." A Chrysler dealer charged a customer $1,620 for a service contract that had a suggested price of $250 and a wholesale price of $125. And a Ford dealer charged a customer $1,495 for a service contract with a suggested price of $315 and a wholesale cost of $195.

The New York probe dealt only with manufacturer service contracts, usually with suggested prices that included profit for dealers. It did not look into pricing of service contracts offered by dealers or third parties, or of automaker service contracts "bundled" with price-obscuring options.

GM, Ford and Chrysler provided both the suggested prices for their contracts and the actual sales data. Toyota does not have suggested prices, but Abrams concluded there was price gouging because 83 percent of the contracts were sold to consumers for more than twice the dealer cost.

Big 3, Toyota provide data for service contract study

According to the New York study, overpricing exists when the customer pays more than the manufacturer's suggested retail price for the contract. When there is no suggested price, gauging takes place when the customer pays more than twice the dealer's cost for the contract. Four companies provided data:

Ford Motor Co. provided information showing that of 105 service contracts, 57 percent sold above the suggested retail price. The average was $268 over the suggested price.

General Motors, 147 contracts, showing 61 percent of those contracts sold above the suggested retail price. The average was $265 over that price.

Chrysler Corp., 1,161 contracts, showing 46 percent sold above suggested retail price. The average was $273 over that price.

Toyota Motor Sales U.S.A. Inc., 300 contracts, showing 83 percent were more than twice the dealers' wholesale cost by an average of $252. Toyota does not provide a suggested price.

New trial for dealer, Toyota

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Former Missouri Toyota dealer Fred Angle, who won a $5 million award against Toyota Motor Sales U.S.A. in January, may have to prove a second time that the automaker used the controversial turn-to-earn allocation system to force him out of business.

Clay County Circuit Judge Kenneth Elliott has granted Toyota's motion for a new trial on the grounds the jury was given wrong instructions for setting damages.

Angle has appealed the decision.

Toyota, in a routine legal procedure, had asked Elliott to enter an order limiting damages. Instead, he decided to redo the trial.

Angle, who was a Toyota dealer in Kansas City from 1983 to 1986, charged Toyota with shorting his allocation of cars to force him out of business.

He accused the company of engaging in conduct that caused damage to his franchise; refusing to deliver vehicles in reasonable quantities and in a reasonable time; and imposing unreasonable standards of performance in violation of the Missouri Motor Vehicle Franchise Practices Act.

Mitsubishi gets sales, exposure in Value stake

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

CYPRESS, Calif. — A Japanese firm joined the Big 3 in the daily fleet rental business last week when Mitsubishi Motor Sales of America Inc. bought controlling interest in Value Rent-A-Car, based in Deerfield Beach, Fla.

Although Value is relatively small, the association is an important one for Mitsubishi, which expects three benefits:

- A steady stream of fleet sales.
- Increased product exposure.
- Low-mileage used cars for dealers.

"One of the reasons you like to own your own daily rental company is that you know that you'll have captive fleet business that you can count on, and then we can plan our production cycles and their fleet cycles in sequence," says Dick Recchia, Mitsubishi's executive vice president and chief operating officer.

Mitsubishi plans to supply 85 percent of Value's 20,000-unit requirements by year's end. Before, the fleet was dominated by Fords. Four-door Mirages, which Mitsubishi will begin building at the Diamond-Star Motors Corp. plant this fall, will be the biggest part of the fleet, supplemented by Galants and Monteros.

Mitsubishi has been riding a wave of increased sales. For the first quarter this year, sales were 68 percent ahead of last year, the best of any nameplate. Recchia says buying Value will help ensure continued success.

"We bought a rental company that specializes in tourist and leisure, rather than business, travel. That means people — families — are in our cars for an average of five to seven days, not two or three days," Recchia says. "Getting prospects into our cars is a key part of the equation."

Value currently has 25 locations in Florida, Louisiana, Georgia, Arizona, Colorado and Nevada, including new facilities in Las Vegas and Ft. Lauderdale and Orlando, Fla. Recchia said Mitsubishi is studying the California market for possible expansion in the mid-1990s.

Recchia says the acquisition will allow dealers to compete more aggressively in used cars.

"We're going to generate a Mitsubishi-branded entry-level price car into the market," said Recchia, "reaching owners who can't necessarily afford the new cars." Mitsubishi's least expensive car, the Precis, sells

see MITSUBISHI, page 52

With its majority control of Value Rent-A-Car, Mitsubishi has a captive fleet business.

Curry questions data supporting boost in CAFE

By Jack Keebler
and Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTERS

WASHINGTON — The head of the National Highway Traffic Safety Administration last week raised doubts about the research supporting a bill that would force dramatic increases in corporate average fuel economy.

NHTSA Administrator Jerry R. Curry made the remarks during the annual SAE Government/Industry meeting in Washington. In a technical session earlier that day, the contractor who did the research for the Department of Energy faced stiff questions from a Chrysler Corp. economist. And he conceded his analysis did not justify the fuel economy increases in the legislation.

Curry

That measure, sponsored by Sen. Richard Bryan, D-Nev., looms as one of automakers' biggest fears as Congress considers ways to confront the global warming theory.

The theme of this year's session was the need for a government-industry dialogue in addressing mutual problems. Among the findings presented:

- The use of safety belts does not increase in cars with automatic, non-motorized belts.
- The fuel efficiency of the nation's car fleet can improve with current technology.
- Overall fuel economy has slipped because consumers have higher priorities than saving gas.

And in a conference-wide address, the president of Ford Motor Co. said half the world's global automakers will be lucky to survive the competition over the next 10 to 15 years.

The bill referred to by Curry would require that makers improve their CAFE by 20 percent from 1988 levels by 1995 and 40 percent by 2001. The current standard is 27.5 mpg.

"My discussions with engineers indicate that CAFE conclusions of a 40 percent increase by the year 2000 seem to rest on the analytical findings of one man," said Curry. "His work may be excellent, but then again it may not be."

Earlier, the DOE contractor, K.G. Duleep, director of engineering for Energy Analysis Inc., had defended his tough estimates. But he did make some small "revisions" in the automakers' favor.

Duleep said the DOE analysis did not support rules that would require a 20 percent increase in fuel economy by 1995 and a 40 percent increase by 2001.

He said, for example, that his analysis did not address the weight added by tougher emission controls and safety features. In conclusion, he said that the "maximum technology" called for to achieve the highest improvements in economy were "risky and not cost-effective to the consumer."

W.V. Bussman, an associate corporate economist with Chrysler Corp., attacked the original work done by Duleep with a zest rarely seen in SAE technical sessions. But Bussman added that the Duleep revisions had brought the estimates "more in line with what the industry believes are true."

Bussman's model only predicts a 5.4 to 7.5 percent improvement by 1995 from a 1987 baseline.

TECHNOLOGY'S EFFECT ON FUEL ECONOMY

Through the use of available technology, automakers will help keep carbon dioxide emissions constant through the end of the century, according to David Greene, a researcher at the Center for Transportation Analysis.

If automakers made no significant changes to their cars, the average fuel economy of this country's car fleet would increase 24 percent to 33.5 mpg between 1987 and 2001 just because older, less fuel efficient cars will be scrapped. If maximum use of current technologies is made, fuel efficiency could increase 46 percent to 39.4 mpg in 2001. Similar gains would be made with light trucks.

	1995		2001	
	Existing Technology Level	Maximum Technology	Existing Technology Level	Maximum Technology
Autos	29.30 mpg	31.53 mpg	33.50 mpg	39.40 mpg
Light Trucks	22.45 mpg	23.07 mpg	24.95 mpg	27.00 mpg

Inactive passive belts

The use of safety belts has not increased in cars equipped with non-motorized automatic lap and shoulder belts, a system used widely by General Motors, federal researchers said.

Although they are designed as passive restraints, the devices can be easily unfastened near the hip. They then can function similar to a conventional, active three-point system.

In contrast, preliminary studies show that fatalities have dropped 5 to 10 percent and injuries 16 to 23 percent in cars equipped with two-point motorized passive belts, said researchers from the National Highway Traffic Safety Administration.

Holding the line on CO2

By using available, cost-effective technology, automakers can help keep carbon dioxide emissions — believed to be a major cause of global warming — constant through the year 2000, said David Greene, a researcher at the Center for Transportation Analysis at the Oak Ridge National Laboratory in Oak Ridge, Tenn.

If automakers made no significant changes to their cars, the average fuel economy of the nation's car fleet would increase from 27 mpg in 1987 to 29.3 mpg in 1995 because older, gas-guzzling cars will be off the road. In 2001, the figure will be 33.5 mpg.

If automakers were to use all the available technologies — such as front-wheel drive, multivalve engines and aerodynamic design — fuel efficiency could be boosted to 31.53 mpg in 1995 and 39.4 mpg in 2001.

But the maximum achievable fuel economy is not the most economic, Green said. He said the maximum costs of those investments outweigh the benefits in fuel savings.

Big car trend continues

Representatives from Ford Motor Co., General Motors and the EPA said that technological advances have provided large fuel-economy benefits — but powerful forces in the marketplace are depressing fuel-economy numbers.

And there is nothing to indicate that this trend will be reversed soon.

Carmakers pointed out that although individuals say that fuel economy is one priority in buying decisions, they are also strongly influenced by low-cost fuel, safety features, rear-drive preferences, passenger capacity and towing and

UAW blasts plan to sweeten GM's exec pension

GM Chairman Roger Smith's yearly pension would rise nearly $500,000 annually.

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors' proposal to dramatically boost the pensions of its top executives drew fire from the UAW.

The modified pension plan, if approved by shareholders at the May 25 annual meeting, would bump GM Chairman Roger B. Smith's yearly retirement payout to about $1.2 million, up from $700,000 under the existing plan. Smith retires at the end of July.

UAW President Owen Bieber called the sweetened pensions, which will cost the automaker about $42 million extra this year, "outrageous." UAW members are demanding improved pensions for members and retirees in this year's contract talks. GM's contract with the UAW expires Sept. 14.

Bieber said GM, in light of the proposed hike in pensions, has no excuse "to be less than fully responsive to the needs of our older members and retirees."

GM's new plan for its top 3,350 executives would apply the pension formula to salary as well as bonus. Under the present plan, GM bases pensions only on salary.

GM said surveys showed GM's pension plan was less competitive than 80 percent of the U.S. companies surveyed.

Mazda: Ford-Marine deal promising

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Mazda Motors of America hopes its credit arm can provide better service to Mazda dealers and win more business from them when Ford Motor Co. acquires Marine Midland Automotive Financial Corp.

The Ford-Marine Midland deal is expected to be completed in a few weeks.

Kazutomo (Ted) Tsuchiya, executive vice president of Mazda Credit, said Mazda Credit's penetration in dealer and customer financing has been "less than satisfactory" with Marine Midland, which has serviced Mazda dealers and buyers since 1987.

Mazda Credit finances less than 10 percent of new Mazda cars and trucks. That compares with 25 percent in early 1988. Mazda Credit provides floor-plan financing to only 30 of Mazda's 850 U.S. dealers.

Mazda dealers have complained that Marine Midland hasn't provided them with competitive interest rates and quick turnaround times in processing loan applications. Mazda was so unhappy with tightened credit policies and poor service at Marine Midland that it seriously considered bringing its credit arm in-house.

Tsuchiya said Mazda Credit "is still investigating and studying" various options to improve service to dealers. But the credit arm has another two years until its Marine Midland contract expires.

Tsuchiya said Mazda Credit may choose to evaluate the Marine Midland operation under Ford's control for the next two years.

Ford has assured Mazda that under its proposed acquisition of Marine Midland's business, announced April 14, Marine Midland's operations would be kept separate from Ford's North American Automotive Financing Operations.

GM's COUP

3-year NBC deal provides top programs, ad discount

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

General Motors' three-year $500 million-plus deal with the National Broadcasting Co. will lock up bigger ad discounts. It will also lock out GM's competition from top-rated programming — just in time for the Saturn launch.

Philip Guarascio, GM executive director of advertising and strategic marketing, said some of that blocked-out ad time will be devoted to GM's forthcoming Saturn cars.

With the launch of GM's Saturn in the wings, the deal establishes a "base and a vote of confidence from what has been our largest client," said Larry Hoffner, NBC executive vice president network sales.

Chrysler Corp. said there is still plenty of room for the automaker's ads on NBC prime-time. In fact, Chrysler had a chance to purchase advertising time during NBC's NFL programs but turned it down, said Arthur Kesterloot, Chrysler advertising and media relations manager.

"We just purchased a four-year contract with CBS and ABC (television networks) for football. We chose not to buy NBC (football programs)," said Arthur Kesterloot, advertising and media relations manager at Chrysler Corp.

"We compared the buys and found CBS and ABC (television networks) better for us. Additionally, we have a four-year commitment to (advertise during) National Basketball Association games on NBC."

Ford Motor Co. declined comment on the GM/NBC deal.

Advertising Age, a sister trade publication to *Automotive News*, reported that GM, Ford and Chrysler have signed contracts to sponsor ABC's "Monday Night Football" for four years, starting this fall.

Each automaker gets revolving quarter-by-quarter exclusivity in the Monday night games for an estimated $46 million each. They will likely be joined by three other car companies.

Toyota Motor Sales USA has agreed to be a sponsor of the halftime show while incumbent Monday Night Football advertisers Nissan Motor Corp. in U.S.A. and Mercedes-Benz North America are continuing negotiations. *Advertising Age* said Mazda and Honda would consider buying in if either Nissan or Mercedes-Benz pulls out.

Last week GM and NBC announced an advertising pact that makes GM the only domestic car advertiser during National Football League games on that network. Also, the deal gives GM first shot at NBC's prime-time programming and its cable networks, CNBC and Sports Channel America.

The agreement begins with the 1990-91 television season, is for a minimum of three years and worth in excess of $500 million.

GM's Guarascio, said the pact is consistent with GM's on-going effort to get the maximum value for GM's advertising expenditures to further the sales efforts of GM divisions, including Saturn Corp.

"It assures us access to NBC's best programs at very favorable rates," said Guarascio. "It helps our dealers to a degree that we can showcase our advertising on desirable programs while minimizing our competitors' access to those programs."

He added that the deal puts GM in a "better position to negotiate other advertising buys."

NBC's Hoffner called the agreement "the largest commitment made by any advertiser in the history of television advertising sales.

"We were not forced to make this deal," Hoffner said. "We embraced it with GM."

In the mid-1980s GM instituted a strategy whereby it demanded corporate-wide advertising discounts, rather than division by division, in exchange for multi-year contracts.

Many marketing experts applauded GM's latest move.

"They're squeezing all of their suppliers — that's just good business," said Thomas C. Kinnear, a professor of marketing and associate dean at the University of Michigan Business School.

Vehicle trade deficit declines in January

WASHINGTON — Falling demand for imported vehicles led to a 14.5 percent decrease in the U.S. automotive trade deficit in January.

The U.S. trade deficit in passenger cars and light trucks stood at $2.85 billion in January compared with $3.33 billion in January 1989, statistics from the U.S. Commerce Department show.

U.S. vehicle imports dropped "largely because the Big 3 experienced an overall decrease in sales in the U.S. market, which led to a decline in U.S. imports of their Canadian-made autos," according to Dennis Rapkins, Chief of the U.S. International Trade Commission's Transportation Branch.

The January improvement also reflected a 2.6 percent decline in the value of Japanese-made imports. "There was a slight contraction in U.S. demand for certain Japanese-made autos, and U.S. production by Japanese-owned automakers increased and continued to substitute for imports from Japan," Rapkins said.

The value of U.S. exports also declined for the month. U.S. automotive exports stood at $685 million in January compared with $853 million one year ago. The 19.7 percent drop was mainly due to a 26.5 percent reduction in exports to Canada.

The value of U.S. passenger car exports to Japan increased 82.6 percent for the month.

Several countries showed increases in the value of cars shipped to the United States. The value of January shipments increased 4.3 percent from West Germany, 49.1 percent from Mexico, 9.1 percent from the United Kingdom and 49.5 percent from Italy.

Countries that saw a decline included Japan, 2.6 percent; Canada, 22.5 percent; South Korea, 69.5 percent; Sweden, 58.4 percent; France, 92.8 percent and Brazil, 39.1 percent.

Among light truck-producing nations, Mexico was the only country to make headway in January. U.S.-bound shipments increased from 719 vehicles in January 1989 to 20,018 in January 1990.

The value of light truck imports fell 12.7 percent from Canada, 46.8 percent from Japan and 63.8 percent from "other" nations, the Commerce Department reported.

The value of U.S. exports of light trucks fell 62.0 percent for the month. The value of shipments to Canada was down 61.6 percent.

There were 320,866 light trucks and passenger cars imported to the United States in January 1990 compared with 405,962 a year earlier. The total quantity of light truck and passenger car exports fell from 74,678 in January 1989 to 54,308 last January.

For the 12 months ended Jan. 31, the automotive trade deficit was $41.8 billion compared with $43.2 billion the previous 12 months.

Ford to build 3 types of V-6

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

ROMEO, Mich. — Ford Motor Co. will offer 2.0-, 2.5-, and 3.0-liter displacement versions of its modular V-6 engines by the mid 1990s. They will likely power such vehicles as its Taurus-Sable and Tempo-Topaz cars.

David Hagen, general manager of Ford's Engine Division, said the automaker is planning a second phase of its new modular engine program that will produce V-6 engines; the first phase involves V-8 engines. The V-6 engines will be produced at Ford's Cleveland Engine Plant beginning around 1993.

Sources close to the project say Ford is considering building the modular V-6 engine for the future Tempo-Topaz's European counterpart, the Ford Sierra, at the Cleveland plant as well.

Ford currently is overhauling Cleveland Engine No. 2, one of two portions of the complex, to mirror its Romeo, Mich., engine plant. The Romeo plant, considered a model for future Ford engine plants, will build the 4.0-liter and 4.6-liter modular V-8 engines in as many as 12 variations on one assembly line.

Ford's new modular engine program allows the automaker to build several variations of an engine from one basic design. That allows Ford flexibility as it faces more stringent fuel economy and emission standards in the future.

Hagen said Porsche System Engineering in Weissach, West Germany, did up front work on the first designs for the modular V-6 engine. Ford accepted 90 percent of the Porsche design, Hagen said, although the Porsche design did not meet Ford's requirements.

Hagen said the combustion chamber on the Porsche-designed engine did not have the burn rate Ford wanted.

"It was a good experience (with Porsche), but, again, it taught us that Porsche is more premier in the areas of getting a lot of power out of good structure," said Hagen.

Cleveland nixes team concept

ROMEO, Mich. — Gutting its engine plant in Cleveland and installing new machinery will be the easy part.

The tough part will be persuading workers to adopt a team concept.

Ford Motor Co. wants its Cleveland Engine Plant No. 2 to mirror its Romeo, Mich., engine plant. In addition to new manufacturing methods, testing procedures and supplier requirements, Ford and the UAW in Romeo have implemented a team concept to boost quality.

But Cleveland workers, who operate under a traditional labor contract, are resisting the team concept.

"You won't see the team concept in Cleveland (Engine Plant). There are a lot of guidelines that we've had for 30 years, and we're not about to change things," said UAW Local 1250 President Jerry Melillo, who represents workers at Ford's Cleveland engine complex.

"Ford would like us to buy into the Romeo agreement. We won't. We believe we build the finest engines in the Ford system. Our emphasis will be on quality and training," Melillo said.

Compiled by Automotive News from official statistics of the U.S. Commerce Department, as reported by the U.S. International Trade Commission. Because of rounding, figures may not add to the totals shown.

Service Index rises in March, 1st quarter

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Service and parts business at auto dealerships in March continued on the positive side for the third consecutive month.

With all five indicators in the Automotive News Service Index registering increases for the second month in a row, March service and parts volume amounted to 106.2 percent of the shop business performed in March 1989.

Although March volume was ahead of the year-ago total, the increase was less than the gains reported by dealers in February, which was up 13.6 percent over the corresponding year-ago month, and January, up 12.3 percent.

Figures used in the Service Index are averages compiled from reports on shop operations from a cross-section of the nation's new-car dealerships.

March's leading indicator was total labor sales (customer-paid and warranty), which topped last year's volume by 12.9 percent. Next was sales of parts and accessories, up 4.6 percent.

Shop parts sales, used on both customer-paid and warranty repairs, were up 3.0 percent. Gross profit on all labor, parts and accessories — the most important indicator from the dealers' viewpoint — was 2.6 percent above last year's figure. Repair orders written were 0.1 percent over the number in the same month last year.

Dealer service and parts business for the first three months of 1990 was 110.7 percent of the volume for the comparable period a year ago. All five indicators used in the compilation also were up from the corresponding 1989 period.

Sales of all parts and accessories led the year-to-date indicators with an increase of 10.5 percent, followed by gross profit, up 8.9 percent. Total labor sales increased 8.8 percent; shop parts sales climbed 7.3 percent; and repair orders written were up 0.1 percent.

SERVICE INDEX 106.2*

	March, '90 vs. March, '89	Jan.-March, '90 vs. Jan.-March, '89
Gross Profit on All Labor and P&A Sales	+ 2.6%	+ 8.9%
Repair Orders Written	+ 0.1%	+ 0.1%
Total Labor Sales (Customer & Warranty)	+12.9%	+ 8.8%
Shop Parts Sales (Customer & Warranty)	+ 3.0%	+ 7.3%
Sales of All P&A	+ 4.6%	+10.5%

* Survey by Automotive News shows that dealers' service and parts business in March 1990 was 106.2 percent of business in March 1989. Service business in the first 3 months of 1990 was 110.7 percent of business in the corresponding period in 1989

523,800 outlets sell auto goods

LANHAM, Md. — In 1989, more than a half million outlets were selling automotive products to consumers, according to an Automotive Parts and Accessories Association study tracing the aftermarket distribution system.

The association's fourth edition of *The Retail Distribution of Automotive Products* found 523,800 such U.S. outlets in 1989 despite the year's high rate of merger and acquisition activity.

The total includes 52,600 traditional (auto supply and tire stores), 24,500 jobber, 298,200 service outlets and 148,500 mass merchandisers. Service locations include car dealerships, service stations, specialty and general repair shops, recreational vehicle and motorcycle dealers, car washes, parking lots and quick lubes. Mass merchandisers include discount, department, hardware, food, drug and variety stores.

The association estimates one-third of all U.S. retail establishments now sell auto products.

ESTABLISHMENTS HANDLING AUTOMOTIVE PRODUCTS IN 1989
(in thousands)

Type of outlet	1980	1983	1986	1989
Traditional	43.4	50.2	53.3	52.6
Service outlets	317.3	313.1	290.7	298.2
Mass market	130.3	133.1	140.6	148.5
Jobbers	29.5	22.2	22.7	24.5
Total	520.5	518.6	507.3	523.8

OUTLOOK:

Makers' impact on aftermarket to lessen despite niche vehicles, longer warranties

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

LAS VEGAS — The automakers' role in designing, producing and marketing a variety of vehicles will have less impact on the future of the U.S. automotive aftermarket than it might appear.

Richard J. Sherman, general director of sales and marketing for GM's Service Parts Operation, delivered that message to a marketing conference sponsored by the Motor and Equipment Manufacturers Association and the Automotive Warehouse Distributors Association.

Sherman

Sherman said that niche-market vehicles, shorter product cycles, vehicle quality improvements, extended warranties and technological advancements have a limited impact on parts proliferation, but could open new avenues of business for the automotive parts aftermarket and independent service outlets.

To a large extent, Sherman said, niche vehicles are designed and manufactured for special needs of select groups of customers. They are unique, functionally and cosmetically, he said.

"To cite a current example, the two-passenger Buick Reatta and the five-passenger Buick Riviera appear very unique and different from each other," he said. "Their bodies and interiors are certainly unique, but much of the drivetrain and componentry, which is not perceptible to the consumer, is common to both vehicles."

Future vehicles, Sherman said, also will tend to share more componentry while still having unique niche-market appearances.

According to Sherman, the keys to meeting rapidly changing consumer tastes — economies and timing of shorter vehicle design, development and product cycles — also dictate that similar components be used when possible.

He said the impact of more niche-market vehicles and shorter product cycles on parts proliferation and serviceability will not be as great as suggested by the variety of vehicles offered now and in the future.

Sherman said many manufacturers are targeting a 100,000-mile trouble-free vehicle to meet consumers' minimum perceived demands. He said this dictates development of more reliable and durable component parts and shorter required maintenance intervals.

As quality improves, vehicles will remain on the road longer. Vehicles 10 years old or older represented 12 percent of the vehicle population in 1970, 20 percent in 1978 and 32 percent in 1988. This is expected to continue, he said.

The focus of independent service outlets on three- to 10-year-old vehicles could shift to six- to 15-year-old models, he said. This affects both extended and original-equipment-manufacturer warranties, but Sherman does not expect it to greatly impact service market size. "In light of the component quality improvement goals of most OEMs and increasing vehicle life expectancy, improved warranties in and of themselves may have little impact on the size of the independent aftermarket," he said.

There is little doubt that future vehicles will be more technologically advanced and more complex, Sherman said. Even so, he added, customer preference and competition still will have a large impact on where consumers go for service of their more complex vehicles.

"Customers will go where it is most convenient and where they get satisfaction," he said. "Obviously, in many cases, distribution channel participants will need to acquire new service skills if they hope to capitalize on the technologically driven aspects of vehicle repair."

"In order to adapt, investment in people, through training, and diagnostic equipment, as well as management of technological information, must be made."

REWARD

Ford dealer service employees get perks for better customer satisfaction ratings

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — Ford Motor Co. has introduced a program that awards dealership service employees cash and prizes for improvements in the dealership's customer satisfaction rating.

Kenneth W. Myers, parts and service marketing manager for Ford Parts and Service Division, says the incentive program, called "Values in People," is designed to involve dealership personnel in a team effort.

"It gives dealership employees a strong motivation to work for improved customer satisfaction — motivation in the form of quarterly cash, merchandise or travel," Myers says.

Under the program, if the service rating of the dealership improves a minimum of two-tenths of a point in a quarter, compared with the same year-ago period, workers will receive cash or points that can be used for merchandise and/or travel.

Ford grades a dealership's customer satisfaction on a 1-10 scale, with 10 the best score. The Quality Commitment Performance rating is based on surveys by Ford Parts and Service Division of a dealership's service customers and new buyers.

In the rating system, Ford and Lincoln-Mercury dealers averaged a score of 7.58 for 1989 and 8.07 for the first quarter of 1990, Myers says. "We want to continue to improve that average," he adds. "With this program, there are so many more employees involved in this part of the activity, and they are the ones always left out. The program will get all of them thinking."

Myers says Ford already has evidence that the program is working. "Never before have we had dealership technicians coming up asking how they did on their Quality Commitment Performance," he says. "Now we have them asking."

Ford started the program after recognizing the one ingredient it had neglected in its many initiatives to improve customer satisfaction and dealer handling of customers — a reward for employees when the dealership improves its rating.

He said the division has targeted its largest 2,000 metropolitan dealers.

"Any dealer can sign up for the program, and we have a lot of other dealers as well," he says. "But we find the smaller, more rural dealers have very good customer relations, generally. Their scores are somewhat higher than those of larger metropolitan dealers."

Myers

Initially, 2,500 of Ford's 5,500 dealers enrolled approximately 34,500 service employees. The division was successful in signing 87 percent of the target group.

Enrollment is open to two groups of employees. Group A includes parts and service directors, service and parts managers, service advisors, body shop managers and foremen, dispatchers, cashiers, switchboard operators, and rating program coordinators.

Group B employees include technicians, vehicle prep personnel, and retail and shop parts personnel (excluding wholesale personnel).

Awards for Group A employees range from $300 in top-volume dealerships, $200 in mid-volume dealerships and $100 in low-volume firms, while Group B dealership employees receive $200, $100 and $50, depending on the size of the dealership.

Ford parts and service funds 50, 75 or 100 percent of the award's cost based on improvement over the overall service rating in the comparable year-earlier quarter.

Ford will fund 50 percent of the awards' cost for a 0.2 point improvement, 75 percent for a 0.4 improvement, and 100 percent for an 0.8 improvement.

As an example, if a dealer had a 7.60 overall service satisfaction score in the prior-year quarter, and the score improved to 8.00 this year (0.4 improvement), the dealer's employees would receive awards, and Ford would fund 75 percent of the award costs.

If the dealership does not attain its improvement target, no awards are issued, and there is no cost to the dealer.

Any charges for the program are billed quarterly to the dealer's parts statement.

Association aids exporters

LAS VEGAS, Nev. — The Automotive Service Industry Association has devised a program to help qualified members begin exporting or expand their export operations in overseas markets.

The association has received export certification status from the United States Commerce Department under terms of the 1982 Export Trading Company Act.

Certification permits the association to operate as an export trading company. Qualifying member companies will be able to operate as trading companies under the umbrella of the association.

The program was kicked off here with a meeting attended by representatives of about 50 member firms during the association's international automotive aftermarket convention.

Lorne Nedvidek, director of international affairs for the association, said members can obtain a certificate of preclearance allowing the firms to engage in export activities on a joint basis with competitors if they wish, and to prepare joint bids, establish export prices, allocate markets and exchange information.

"The association's role," he said, "is to serve as a catalyst for the participating members to develop creative ways to use the antitrust protection afforded by the act for the purpose of launching or expanding their markets overseas."

Florida consumers win majority of new lemon law cases

SENIOR CORRESPONDENT

More than 70 percent of consumers who had cases approved for arbitration under Florida's toughened lemon law were successful last year.

As a result, Florida Attorney General Robert A. Butterworth is calling the first year of the state's second generation lemon law a success. Consumer awards were worth $2,934,936.

Consumers won 89 of the 136 cases decided by the state board, with a total value of $1,917,943, or an average of $21,550. All but four of the winning consumers chose refunds over replacement vehicles.

An additional 64 consumers entered into settlements before a hearing. Of those, 56 received full refunds or replacement vehicles.

Only 206 lemon cases were handled last year, partly because of normal start-up delays and partly because no pending lemon cases were covered retroactively by the new law. Of the 206, four were withdrawn by consumers. Two others were already in negotiation.

The state expects far more activity in 1990. There will be carryover cases from 1989, and consumers better understand their rights. In the first two months of 1990, 116 lemon cases were underway.

The Florida law covers purchased and leased new vehicles and demonstration models. It covers cars, vans, utility vehicles, light trucks and mechanical and structural parts of recreational vehicles.

FLA. LEMON LAW

Table compares each company's share of Florida car market with its share of the Florida complaint market. A total of 89 complaints were decided for consumers by Lemon Law arbiters.

Company	Share of complaints	Share of car sales
Chrysler	20.2	14.7
Ford	42.7	23.9
GM	18.0	35.0
All Others	19.1	26.4

Source: Florida Lemon Law Arbitration Program

After the vehicle undergoes three failed repair attempts or spends 30 days out of service, the consumer must give the maker one final chance to fix the problem. If not satisfied, the consumer then uses a state-certified manufacturer arbitration program if there is one or goes directly to the state-run board. If still dissatisfied with that decision, the consumer may take the case to court.

On resale, the vehicle's lemon status must be disclosed.

Buyers of new cars in the state get a Lemon Law Rights Booklet and defect-notification forms.

By April 1989, cases had started to trickle in and by May, the attorney general had appointed 48 arbitrators still to be trained.

During the last half of 1989, Ford, Toyota, General Motors, Saab, Rolls Royce, Volkswagen and Honda received state certification for programs.

Philip Nowicki, who runs the Florida program and was the chief author of the law, says most cases involved new cars and the automaker's failure to fix the problem in three tries. When filing for arbitration, the average consumer had used the vehicle for 5.8 months or 7,707 miles and incurred expenses of $311.67.

Of the 136 decisions, three have been appealed: one by Chrysler, one by Mercedes-Benz and one by a consumer against Isuzu. All are still in court.

By far, the greatest problems were engine-related — starting, stalling and rough running.

Nowicki has worked out a Lemon Index, based on the number of units sold in Florida and where at least two cases were decided in favor of consumers.

90 DAY FREE TRIAL

Prepare accurate lease or finance proposals in minutes with the assurance of *Black Book*® accuracy.

Absolutely no obligation . . . No computer knowledge or experience needed to load or operate. Take 90 days to prove to yourself that the Black Book Finance/Lease Software program is the most accurate, most user friendly and most dependable software program available.

Precise new car and truck pricing is updated monthly. The industry's most accurate residual values are generated from a data base compiled from more than 35 years of major dealer auction coverage and reporting nationwide.

Court calls lemon ruling too generous

By Helen Kahn
SENIOR CORRESPONDENT

It looks like John D. DePaola won't be getting lemonade from his "lemon" 1985 Volvo after all.

An arbitrator had awarded DePaola a new 1987 Volvo 745 GLE after ruling his 1985 version with 47,000 miles on it was a lemon. A lower New York court upheld that award.

But now a divided New York state appellate court has ruled that the arbitrator was too generous. The case has been sent back to arbitration.

DePaola, complaining of engine stalling and vibration at high speeds, had gone to arbitration under Volvo's dispute settlement program with the American Arbitration Association.

He was awarded the 1987 Volvo under the "comparable vehicle" provision of New York's lemon law.

Volvo of North America unsuccessfully challenged that award in a lower court.

The company appealed again, and the court, in a 3-2 decision, rescinded the award.

The court, referring to the legislative history of the New York law, says a "comparable vehicle" means a "vehicle of the same year and model and which has approximately the same mileage as the vehicle being replaced."

But this is not necessarily a "new" vehicle.

The court pointed out that the state lemon law provides for either a replacement vehicle or a refund of the purchase price.

It also allows adjustments for mileage over 12,000 as well as damage beyond normal wear and improvements.

The court reasoned that these same factors will be considered for the "comparable vehicle" option.

"Thus, the statute provides for alternative remedies that are of equivalent value.

"To uphold the award in this case would frustrate the statutory scheme and allow the consumer to choose between remedies that are grossly disproportionate in value," the court said.

EARNINGS

FROM PAGE 1

climbed to $15.25 on May 1 following the earnings report.

Chrysler Corp. Chairman Lee Iacocca said that despite first quarter production cuts, weak sales and costly incentives, the company's automotive operations were profitable. Chrysler said it was able to achieve about $200 million in fixed-cost savings during the quarter as part of its $1.5 billion cost-cutting program.

"Our $1.5 billion cost-cutting program is certain to become a major competitive advantage for Chrysler," Iacocca said. "We are on the road toward our goal of becoming the lowest-cost, highest-quality automotive producer in North America."

Incentive costs averaged $1,400 per vehicle during the quarter, nearly double those of one year ago, the company said.

Chrysler Financial Corp. came to the rescue of Chrysler Corp.'s bottom line in the first quarter by earning $89 million. Only $66 million was passed along to the corporate parent because of preferred stock action and because of tax rate changes when the subsidiary's earnings are consolidated with those of its parent.

John P. Tierney, chairman of Chrysler Financial, said the subsidiary's net earnings were 37 percent higher than the previous first quarter record of $65 million set in 1988 and 1989. He credited lower borrowing costs.

Chrysler said its worldwide factory unit sales fell 26 percent in the quarter to 493,612 vehicles from the comparable period of 1989. Revenues fell 22 percent to $7.5 billion from the first quarter last year.

But Iacocca noted that the "financial community demonstrated its confidence in the company" through its purchase of $1.1 billion in 30-year bonds to finance the Chrysler Technology Center in Auburn Hills, Mich.

Chrysler in the first quarter did not recognize any gain realized from the $825 million sale of Gulfstream Aerospace Corp. in March, 1990. The company said any gain would be accounted for when the remaining units of its Chrysler Technologies operations are sold. Those units are Electrospace Systems, Inc., a supplier of electronic products and systems, and Chrysler Technologies Airborne Systems, Inc., a military aircraft products and systems company. (See story, Page 1.)

Ford Motor Co.

Ford Motor Co. earned $506 million in the first quarter, down 69 percent from a record $1.6 billion in the first quarter of 1989.

Chrysler's incentive costs averaged $1,400 per vehicle during the quarter. That was nearly double those of one year ago.

David McCammon, Ford treasurer and vice president of finance, attributed the sharp decline to soft U.S. sales and lower production rates at its U.S. plants, record costs for incentives and weaker overseas earnings due to economic and labor problems at foreign subsidiaries.

Ford's revenues totaled $23.6 billion, down 9 percent from the first quarter of 1989. Ford's worldwide sales and revenues were $23.6 billion, down nine percent. Factory unit sales slid 17 percent to 1,443,000 in the first quarter. Ford sales outside of the United States were up only slightly.

Profits margins tumbled to 1.7 percent in the first quarter from 6.6 percent in the year-ago first quarter.

Ford earned $315 million on its worldwide automotive business in the first quarter of 1990, down 79 percent from year-ago levels. Ford's U.S. automotive profits amounted to $160 million, down 80 percent; overseas profits totaled $155 million, down 72 percent.

In the United States, Ford spent an average of $1,000 per vehicle on incentives. That compares to an average $400 per vehicle in the year-ago period and $800 in 1989's fourth quarter.

McCammon said work stoppages in Ford plants in Dagenham and Halewood, England, and Mexico cost the company $220 million.

Worldwide capital expenditures hit a first-quarter record of $1.6 billion. Capital expenditures coupled with some costs associated with the $2.5 billion purchase of Jaguar reduced Ford's cash reserves. Ford's cash at the end of the first quarter was nearly $2.9 billion, compared with $4.1 billion at the end of the fourth quarter.

Jaguar had a operating profit, but Ford's costs acquiring Jaguar had a negative impact on profits.

Ford's Financial Services Group reported $191 million in earnings, up 35 percent million from a year ago.

General Motors Corp.

General Motors' profits dipped sharply in the first quarter due to sagging auto sales and higher incentive costs.

Production also was cut in the first quarter to bring dealer inventories down, further affecting earnings.

GM profits plunged 54 percent to $710 million on total revenues of $30.1 billion from $1.6 billion on revenues of $33.2 billion for the first quarter in 1989.

The company's cost reduction program in the first quarter of $800 million affected profits favorably, and overseas operations continued at record levels, according to the automaker.

Electronic Data Systems Corp. had first-quarter earnings of $110 million on sales of $1.4 billion. That compares with $100 million in profits on sales of $1.3 billion for the same period a year ago.

Revenue from EDS's non-GM business was up 16 percent in the first quarter and accounted for 46 percent of total EDS revenues compared with 44 percent for first quarter 1989.

EDS corralled several new customers in the first quarter of 1990 including two state agencies — the Kansas Department of Social and Rehabilitation Services and the Texas Comptroller's Office.

The company also signed an agreement with Texas Air Corp. in which EDS and Texas Air each will own 50 percent of a partnership operating the computer reservation systems of Texas Air's System One Corp.

GM Hughes Electronics Corp. reported first-quarter profits of $183 million on revenues of $2.9 billion. That compares to profits of $210 million on revenues of $3.0 billion during the first quarter of 1989. Lower earnings and revenues of the electronics and defense subsidiary were due to reduced defense spending and lower production of GM vehicles, which use the subsidiary's electronics.

And GMAC reported first-quarter earnings of $336 million, down six percent from 1989. Earnings were down at GM's financial arm due to lower wholsale financing volume.

The company financed or leased 526,000 new cars and trucks in the United States in the first quarter of 1990, down slightly form the prior-year level.

Despite a drop in total U.S. automotive sales in the first quarter of 1990, GM total retail vehicle sales were up, bringing GM's market share for total vehicles to 35.2 percent, a slight improvement over first quarter of 1989.

Worldwide factory sales of vehicles to GM dealers totaled 1.8 million units, down 14 percent from the same period in 1989.

GM dealers in the United States sold 1.2 million cars and trucks in the first quarter, up 1.4 percent from 1.2 million for the first quarter a year ago.

GM overseas unit sales totaled 618,000 cars and trucks, 3 percent above levels sold in the first quarter of 1989.

Unspecified supplier delays Lotus Elan arrival

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Group Lotus's new Elan two-seater will miss the summer convertible selling season in the United States because of supplier-related production delays.

When the company's first all-new car since 1975 debuted at the London Motorfair last fall, the Elan was expected to reach dealerships in Britain in January and in the United States in spring.

But shipments have been held up by problems with three component suppliers, said Lotus Managing Director Michael Kimberley. He said most problems have been overcome and production will increase steadily until the end of August.

Lotus, owned by General Motors, has 4,700 orders for the Elan.

Until two weeks ago, dealers in Britain had received just 25 demonstrators. Kimberley said about 60 cars now have been delivered, and he predicted a U.S. launch in September or October.

"We would have liked to have been ready for the spring selling season in the U.S., but we're a small company and can't do everything at once," he said.

Lotus is not specifying the supplier problems. Peter Riddle, product planning manager, said, "We've been living a little bit hand-to-mouth with one supplier whom I'd rather not name."

Ronald Foster, president of Lotus Cars USA Inc., said he hopes Elans can begin arriving in the United States as early as August. He expects about 400 cars during the calendar year.

"But we haven't sat down with dealers and said here is a firm launch date," said Foster.

Foster said he is not concerned: "A dealer would probably be more upset than me about missing the peak season. The demand is so strong it is not going to impact the sales of the car."

Foster said the U.S. import arm stopped counting orders at about 1,500. "If we had 2,000 cars now the dealers could probably find homes for them," he said.

Lotus Cars USA first showed the front-wheel-drive Elan in December. At that time it announced a price of $33,900 for the 137 mph turbocharged version of the 1.6-liter, 16-valve Isuzu-Lotus, and it said Lotus said dealer shipments would begin in June.

But Foster said a final price has not been set. "It is probably going to be more than $33,900."

Lotus plans to export up to 1,000 Elans annually to the United States out of full production of 3,000 units. Kimberley said production is running at the rate of four a day and is due to reach 12 a day by the end of August.

DELAYED

FROM PAGE 1

dealers expressed dismay at missing the prime convertible selling season.

"Every day we delay jeopardizes our opportunity to make inroads into the market," said Mark Stolkin, owner of Century Chevrolet in Bloomington, Ill. "I think we should have hung onto the Cavalier convertible until the Beretta was ready. We certainly are missing some market by not having either one at this point."

The Cavalier convertible converted by ASC was dropped at the end of the 1989 model year.

"I have no problem with them delaying until they make sure the quality is right," said Bill Nimnicht Jr., president of Nimnicht Chevrolet in Jacksonville, Fla. "But I think the car would have been a good summer seller. It's a beautiful vehicle."

Ken Meade, owner of Pointe Dodge in Detroit and chairman of the Dodge National Dealer Council, said, "We could have used the Shadow convertible, especially considering the market conditions. We would have loved to have seen it in May. It's not what we like, but we will have to grin and bear it."

Chrysler's internal sales target is 25,000 Shadow convertible units annually, and the company plans to sell the vehicle for $13,000 to $15,000, according to a company source. Chrysler sold 82,953 Shadows in 1989, and sales are down 18.30 percent through the first four months of 1990.

The Shadow ragtop has been on-again/off-again. It was originally planned as a 1988 model.

Chrysler sparked the revival of domestic ragtops in the early 1980s.

In the 1982 model year, Chrysler, looking for a way to expand consumer interest in its K-car, hired C&C to make a LeBaron convertible.

C&C predicts the market will continue to boom, with 127,000 domestic and 87,000 import convertibles to be sold in the United States in the 1990 model year and 146,000 domestic convertibles and 89,000 import units in the 1991 model year.

Also introduced or scheduled to be introduced this year are convertible versions of the Oldsmobile Cutlass Supreme, Lotus Elan, Geo Metro, Toyota Celica, Mercury Capri, Yugo Cabriolet, Buick Reatta.

SAE

FROM PAGE 4

load-hauling capabilities.

According to J.D. Murrell, project manager with the EPA in Ann Arbor, Mich., fuel economy has been declining since 1988. The passenger-car fleet fuel economy was 28.6 in 1988 and is 27.8 for 1990.

Benton: Shakeout due

The president of Ford Motor Co. predicts that only five to six of the world's full-line automakers will survive the next 10 to 15 years.

Philip E. Benton Jr. portrayed an economic and technological battle of automotive titans. Under his scenario, 10 to 12 of the largest automaker adversaries will be pitted against each other in a global struggle over the North American, Asian and European markets. Half of them will survive.

The weapons will be "massive" capital investments, large cost and time efficiency improvements, ever-shorter model-cycle times, global-product strategies and high technology, said Benton.

Benton complimented government representatives and industry engineers at the conference for their efforts to provide a forum for "a meeting of minds" in order to find a balance among society's competing demands.

SALES

FROM PAGE 2

the company retreated from what Chairman Lee Iacocca characterized as unprofitable fleet sales. Sales of the full-sized Dodge Dynasty, a big fleet car, dropped by half in April, to just 2,080.

Toyota Motor Sales U.S.A. continued to lead the Japanese advance in car market share. In domestically produced car sales, Toyota was up 94.06 percent to 14,778 for the 10-day period.

Japanese nameplates accounted for 27.08 percent of the U.S. car market in April, up more than four percentage points from April 1989.

General Motors and Ford Motor Co. were up in both cars and trucks for the 10 days, but remained down for the month.

Ford, which had dropped 1.41 percentage points of market share in the first quarter, got a boost from its new Explorer four-door sport-utility and expects to regain market share with the new Escort.

GM's total car and light-truck sales were down 7.42 percent for April, still good enough to post slight gains in market share.

Other April winners and losers:

- Honda's sales of domestically produced cars dropped 16.87 percent for the 10 days, and both sales and market share dropped compared to April 1989, when dealer incentives inflated sales.
- Mitsubishi Motor Sales continued to soar, with April sales of 16,745 cars and trucks, up 67.12 percent from April 1989.
- Subaru of America's April sales dropped 21.20 percent, not as steep as the 35.03 drop it experienced in the first three months of 1990.

EPA chief predicts stiffer standards, enforcement

By Jack Keebler
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — Domestic automakers have done a good job of cleaning up vehicle emissions, but there is more work to do, EPA Administrator William K. Reilly told the Economic Club of Detroit last Monday.

Reilly warned that tougher standards are inevitable and promised vigorous enforcement of environmental laws. He said that a healthy economy supports a healthy environment and a healthy environment ensures a healthy economy.

Reilly contrasted the pollution problems and stunted economic growth of the newly independent nations of Eastern Europe with the environmental and financial health of the United States.

"Poland, Hungary, Romania, East Germany and Czechoslovakia — not to mention the Soviet Union itself — have suffered an environmental catastrophe that will take years and billions of dollars to correct," he said.

"Parts of Poland, East Germany and Romania are virtually uninhabitable. And the same policies that ravaged these nations' environments — the reckless pursuit of unbalanced and unsustainable growth, without regard for the value of natural resources and environmental quality — also ruined their economies."

Reilly said the U.S. auto industry has made environmental progress: "In most major categories of air pollution, emissions on a national basis have either leveled off or declined since 1970.

"Emissions of particulates are down 64 percent; sulfur dioxides, down 25 percent; volatile organics, down 29 percent; carbon monoxide, down 38 percent; and lead, down 96 percent. Automobiles produce 96 percent less hydrocarbons than they did 20 years ago."

Despite the kudos, he said the EPA would continue to stand firm on protecting the environment.

BMW '89 profits up 23% on record output

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

MUNICH, West Germany — BMW AG reported a 23 percent increase in group net profits during 1989 to 558.1 million marks ($332 million).

The consolidated group result was the first posted by the West German carmaker, which had previously issued only BMW AG parent company results. Those results reflected only manufacturing costs and factory sales to subsidiaries around the world.

Chairman Eberhard von Kuenheim did not forecast 1990 results, but said economic conditions are favorable for another good year.

Car production in 1989 surpassed the half-million mark for the first time, rising 6 percent to 511,476.

BMW's output has risen steadily for the past five years.

Worldwide sales revenue increased 4.2 percent in the first third of the year to 9.2 billion marks ($5.5 billion). But unit sales through April declined 1 percent to 185,858.

Besides the 14 percent drop to 20,168 in the United States, BMW sales slipped 15 percent to 16,031 in Britain and 2 percent to 70,129 in West Germany.

Robert Buechelhoffer, BMW's management board member in charge of sales and marketing, said that despite the company's decline in the United States during the first four months, he expects 1990 volume to reach last year's level of about 64,000 units.

Meanwhile, Volker Doppelfeld, BMW's board member for finance, said the company's U.S. business is in the black and he expects it to remain so.

"Our U.S. business is profitable. It is just not as profitable as it once was when we had the (high dollar) windfall," he said.

Despite the rosy worldwide profits picture, some in Europe see chinks in BMW's armor.

Euromotor Reports Ltd, a British research group, noted in its just-released Euromotor Financial Yearbook that BMW could be losing money as early as 1991 because of a combination of higher wages in Germany and shrinking profits.

As a result, Euromotor suggested that BMW "could become an appetizing snack for predators."

The German business publication *Industriemagazin* recently published details of an internal BMW report. The magazine said it contained a worrisome outlook for the next few years.

The internal report cited four areas of concern:

- The debut of Mercedes-Benz's new S-class early next year that will include offensives against the 7-series from above and below.
- Mercedes' adoption of a more sporty and dynamic image, beginning with last year's SL roadster that was closer to a pure sportscar than BMW insiders had expected, and continuing this fall with the V-8-powered 300 E that will compete with the BMW M5.
- Mercedes' successor to the mid-range W124 model in 1993, when the 5-series is five years old, and the appearance of a a replacement for the 190 compact only a little more than a year after BMW's new 3-series appears early next year.
- Mercedes' far greater financial resources.

There have also been repeated rumblings out of Munich that while all of BMW's models have been strong sellers, they have never been sufficiently profitable owing to high production complexity.

Ford, GM revise spiffs, up interest rate

Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Ford Motor Co. and General Motors revamped their retail and dealer incentive programs, which included raising the finance rate to 7.9 from 6.9 percent on most contracts of up to 48 months.

Meanwhile, several import manufacturers adjusted their programs or let them expire.

Ford is offering a $1,000 rebate on the 1990 Escort. Customer rebates on other 1989 and 1990 vehicles are as follows: Festiva, $900; Probe, $1,500; Mustang 2.3L, $1,000; Tempo, $700; Taurus, $900; Thunderbird, $1,300; Crown Victoria, $750; Aerostar, $700; Bronco II, $1,500; Bronco, $1,000; Ranger, $1,000; F-Series, automatic transmission, $700; F-Series, manual transmission, $500; and Econoline/Club, $700.

Customer rebates are $1,500 on 1989½ Mercury Tracer and $4,000 on the 1988 and 1989 Merkur XR4Ti. Other rebates on 1989 and 1990 Lincoln-Mercury models are as follows: Topaz, $700; Sable, $900; Cougar, $1,300; Continental, $1,500; Mark VII, $2,000.

Ford is paying its dealers $1,000 on 1990 Taurus SHO and $2,000 on 1989 Taurus SHO. The program expires May 31.

In lieu of the cash rebate, customers may choose special finance rates. Financing for Escort and Tracer is 6.9 percent for contracts up to 48 months and 10.9 percent for 49- to 60-month contracts. Finance rates on all other Ford and Mercury vehicles are 7.9 percent for contracts up to 48 months and 10.9 percent for 49- to 60-month contracts. There are no special finance rates for Lincoln or Merkur. Ford's program expires May 31.

Pontiac announced retail incentives of $750 on 1989 and 1990 LeMans, Sunbird, 6000 and $1,000 on 1989 and 1990 Grand Am, Bonneville, Grand Prix and Trans Sport. Customer rebate on 1989, 1990 and 1991 Firebird is $750. Also, many dealers are offering an additional $1,000 on Grand Prix.

Pontiac is offering dealers $500 on 1989 and 1990 Firebird.

Oldsmobile ushered in its "New Generation Sell-A-Bration III" program by increasing the retail incentive on 1990 Toronados to $2,500 and adding a new consumer rebate of $1,000 on 1990 Cutlass Ciera.

Oldsmobile dealers earn $750 to $1,250 on 1989 and 1990 Cutlass Supreme, Silhouette, Custom Cruiser, 88 and 98, based on dealer quota. The program expires Aug. 2.

Buick's new consumer program includes 1991 Regal sedan and 1990 Skylark, Century, and LeSabre, all of which carry a rebate of $500 to $1,250, depending on option package selected. Rebates on 1990 Electra/Park Avenue Ultra range from $500 to $1,000, depending on option package selected, while the rebate on 1990 Riviera/Reatta is $2,000.

Buick dealers earn $1,000 on 1990 Estate Wagon through June 4 and $2,000 on 1989 Riviera and Reatta through Aug. 2.

Chevrolet customer rebates include: 1989 and 1990 Geo Metro, $500; 1990 Geo Storm, $800; 1990 Geo Prizm, $900; 1989 and 1990 Geo Tracker, $1,000; 1989 and 1990 Cavalier, $750; 1989 and 1990 Camaro, $1,250; 1991 Camaro $750; 1989 and 1990 Celebrity, $900; 1989 and 1990 Corsica, $700; 1998 and 1990 Beretta, $1,400; 1990 Lumina coupe/sedan, $1,000 plus free V-6 engine; and 1991 Caprice, $750.

Retail incentives on Chevy trucks include: 1989 and 1990 Astro Van (excluding AWD), $700; 1989 and 1990 Chevy Van, $700; 1989 and 1990 full-size Blazer, $1,000; 1989 and 1990 Suburban, $1,000; 1989 and 1990 R/V full-size pickup and chassis-cab, $750; 1989 and 1990 C/K 1500-3500 full-size pickup and chassis-cab automatic transmission (excluding 454SS) $700; and C/K 1500-3500 full-size pickup and chassis-cab manual transmission, $500.

Also included are: 1989 and 1990 S-10 pickup, $1,500; 1991 S-10 pickup, $1,000; 1989 and 1990 S-10 Blazer, $1,500; 1991 S-10 Blazer (2-door), $1,000; and Lumina APV, $900.

Chevrolet extended its current dealer program and added the 1990 Corvette, which pays dealers $2,000 to $4,000 based on sales.

Chevrolet's program expires July 9, except on Caprice which expires June 11.

As an alternative to rebates, GM customers may choose special financing through GMAC of 7.9 percent for up to 48 months or 10.9 percent on 49- to 60-month contracts.

Subaru of America announced a new dealer incentive program which pays dealers $400 on 1990 Loyale, $400 to $1,200 on 1990 Legacy depending on sales and $500 on 1989 and 1990 Justy ECVT. Subaru's program expires July 3.

Sterling Motors Cars' extended its $5,000 retail incentive program until June 30.

BMW of North America's customer incentive program and Saab-Scania of America's dealer program expired April 30. Nissan Motor Corp in U.S.A. dealer programs expired May 2.

PRODUCTION

Trucks built faster now; cars mired

By Greg Bowens
SPECIAL CORRESPONDENT

U.S. automakers scheduled 136,600 cars last week, 0.7 percent below the previous week and 10.76 percent below the year-ago week.

Total U.S. car production this year reached 2,072,729 units, a 23.19 decline from 1989.

Truck assembly last week was scheduled at 93,358 units, or 1.43 percent more than the previous week and 2.78 percent more than the year-ago week. Year-to-date truck production was 1,365,682 units, a drop of 15.44 percent from the 1989 total at this time.

Companies split last week's scheduled production as follows: General Motors, 47.58 percent; Ford Motor Co., 22.78 percent; Chrysler Corp., 11.57 percent; Honda of America Manufacturing Inc., 6.55 percent; Toyota Motor Manufacturing U.S.A. Inc., 3.24 percent; New United Motor Manufacturing Inc., 3.07 percent; Mazda Motor Manufacturing (USA) Corp., 1.56 percent; Diamond-Star Motors Corp., 2.16 percent; Nissan Motor Manufacturing Corp. U.S.A., 1.16 percent; and Subaru-Isuzu Automotive Inc., 0.33 percent.

General Motor's car and truck plants were all running last week with the exception of the Arlington, Texas, plant. That plant is down for conversion to 1991 Caprice output. The Arlington facility produces the Fleetwood Brougham, Caprice and Olds (rwd) wagon.

GM's Janesville, Wis., plant scheduled Friday overtime. The company's Lordstown, Ohio, Detroit-Hamtramck and Lake Orion, Mich., plants all scheduled Saturday overtime.

GMC scheduled Saturday overtime at its Moraine, Ohio, plant where S-15 trucks are assembled.

Ford scheduled Saturday overtime at plants in Wixom, Mich., Kansas City, Mo., Twin Cities, Minn., and St. Louis. Ford also reported daily overtime at Wixom and Wayne, Mich., plants.

Ford's Lorraine, Ohio, Thunderbird/Cougar facility was down last week for inventory adjustment.

Chrysler's St. Louis No. 1 assembly plant, which assembles Chrysler LeBaron J and Dodge Daytona models, will operate a single eight-hour shift during the month of May. All Chrysler Motors U.S. assembly plants are scheduled to work throughout the month.

Canada output increases 10%

Canadian automakers scheduled 26,139 cars for production last week. That was 10.86 percent above the previous week and 18.95 percent above the year-ago week.

This year's total production has reached 352,598 cars, which is 1.55 percent below last year's count.

Truck production was scheduled at 20,961 units, 14 percent higher than the previous week and 1.65 percent below the year-ago week.

To date, the total Canadian manufacturers truck output is 321,860 units, 11.28 percent below the year-ago total.

Dealer orders hold key to changeover downtime

By Michelle Krebs, Wes Brown and Greg Bowens
AUTOMOTIVE NEWS STAFF

DETROIT — Unless dealer orders for 1990 models pick up in the next month, domestic automakers will be forced to schedule more downtime for model changeover at assembly plants than they currently have slated.

The manufacturers have tentatively scheduled less downtime for this summer's model changeover than they did last year. The only plants with particularly long shutdowns are those being renovated or those with products that will be be changed drastically.

Plants with long shutdowns scheduled include:

- General Motors' Arlington, Texas, plant, which will produce the redesigned Chevrolet Caprice and GM's redesigned large wagons
- Ford Motor Co.'s Edison, N.J., plant, which is switching from Escort production to Ranger trucks.

Dealers say they will continue to be conservative about ordering 1990 vehicles for the model-year close-out. Final orders on some models are due by the end of May; orders for other models are due by the end of June or July.

"I would rather be short than overstocked," said Craig A. Kapson of Jordan Motors Inc. in Mishawaka, Ind. Jordan Motors is the nation's largest-volume dealership.

Kapson said a dealer can survive on profits from used-car sales, but being overstocked in new vehicles could jeopardize the business.

Dealers are mixed — and cautious — about how strong sales will be for the rest of the year.

Dick LaGruth, who has Chrysler, Plymouth, Ford, Jeep and Eagle franchises in Forest Lake, Minn., said he is apprehensive, but optimistic, that sales will pick up. "We've seen some good signs recently," he said.

"It's a wish and a prayer to have anything pick up," said auto analyst Thomas O'Grady of Integrated Automotive Resources of Wayne, Pa. "If sales don't pick up soon, the shutdowns will have to be extended."

Dealers indicate their conservatism in ordering will spill over into the 1991 model year. They say they don't intend to stockpile vehicles

Jordan Ford leads nation in '89 sales

By Edward Lapham
MANAGING EDITOR

Fleet sales are the surest way to put big numbers on the board, but most U.S. car dealers still rely on one-at-a-time retail sales, according to the *Automotive News* list of America's largest auto dealers.

The list, which ranks top-producing dealerships for domestic and imported franchises, was compiled for the *Automotive News Market Data Book*, which will be published May 30.

TOP 25 DEALERS

The ranking is based on total new-unit deliveries — car and truck, fleet and retail — for calendar 1989. It features the 10 highest-volume franchises for 31 makes. The entire list of 310 top-selling franchises will be in the *Market Data Book*.

Fleet sales accounted for more than half of total new-unit deliveries in only 81 of those 310 franchises last year. Those top 310 franchises sold 1,032,833 cars and trucks in 1989, and 616,015, or 59.64 percent, were fleet sales.

The highest-volume individual franchise in the United States last year was Jordan Ford in Mishawaka, Ind. Jordan Ford, which has been in business 41 years, also was the largest franchise in fleet volume and the biggest dealership in total dollar sales with $560.5 million last year.

The dealership sold 42,013 fleet units and retailed another 5,639 for a total of 47,652 sales.

Jordan's rise to the top spot was gradual. In 1987, the three top-selling franchises were all Chevrolet. In 1988, Jordan moved into the No. 2 spot.

Craig A. Kapson, president of Jordan Ford, attributed his dealership's success to basic sensible business practices that include making every department a profit

Das Legend

The second-generation Honda Legend Coupe is undergoing testing at the Nurburgring race track in West Germany. The new range of sedans and coupes is expected to reach American Acura dealers this fall.

HONDA BEATER? *Chrysler ads trumpet tests in effort to boost car sales*

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Last November, John Damoose was handed a great job title at Chrysler Corp.: vice president of brand marketing.

But along with the title came a task that in the intervening six months has grown increasingly tough: selling Chrysler cars and trucks.

Last week, the 43-year-old, intensely driven marketing executive announced a bold ad campaign in which Chrysler trumpets the news that some potential car buyers prefer Chrysler's bread-and-butter cars to Honda's best-sellers.

While the current campaign heralds the advantages of American-built vehicles over those of Japanese descent, an upcoming campaign may turn the tables and focus on the company's performance cars, including those built by or with Chrysler's Japanese partner, Mitsubishi Motor Corp.

That campaign aims to change the image of Chrysler's cars as stodgy. It may spotlight the upcoming Dodge Stealth, to be imported from Mitsubishi, the Eagle Talon and Plymouth Laser, built with Mitsubishi, and Lamborghini's Diablo. The lone purely domestic, purely Chrysler-produced car in the campaign is the Dodge Daytona, which has an optional Mitsubishi engine.

The campaigns are a gamble. But Damoose is facing some dreary numbers:

- Chrysler U.S. car market share for four months of 1990 is 8.82 percent, down from 10.72 percent a year earlier.
- Chrysler's U.S. car sales are off 21 percent for the four months, while car sales industrywide dropped 4 percent.

Chrysler now sells more light trucks than cars, and the campaign unveiled last week is aimed at turning the tide. By December, Chrysler expects to resuscitate its car sales and projects that its North American car market share will grow back to 9.7 percent.

In the new advertising campaign, Chrysler claims that tested consumers prefer its models to the Honda Civic and the best-selling vehicle in the United States, the Honda Accord.

"It's not unusual for others to compare their cars to the Accord, which has always been considered a benchmark car," said a spokesman for American Honda Motor Co.

Chrysler's top salesman, Lee Iacocca, details the superiority of the automaker's products over Honda in a new series of commercials.

Honda picks leaders with U.S. savvy

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Tadashi Kume's retirement as president of Honda Motor Co. will leave the company in the hands of its top engineer and two men who served successfully in the United States.

The new president is Nobuhiko Kawamoto, 54, the former head of Honda R&D Co.

Manufacturing, product and sales will be headed by executives who led Honda's growth in the United States in the 1980s. They are expected to continue to make Honda a truly global company.

Kawamoto

Kawamoto will head what Honda calls a top management troika that includes two new executive vice presidents:

- Shoichiro Irimajiri, 50, who earned his wings running Honda's growing manufacturing operations in Ohio.
- Yoshihide Munekuni, 51, who led the U.S. sales company during its years of growth.

The troika takes over as many observers believe Honda is at a crossroads. Japanese news reports of the change noted criticism directed at the company recently for losing the "Honda touch" and producing models that are conservative — and even "boring."

Kume

But analyst Neal Doying of Baring Securities said he does not think the criticism is warranted. He said Honda is doing well with its U.S. strategy. He said Honda is moving upmarket with its consumers — "aging yup-

Horse inspires import plan:
Oilman Armand Hammer plans to join forces with an Ohio car dealer and import from Korea Ssangyong's 4x4 Korando as the "El Paso II," named after his favorite stud Arabian horse. Page 2.

Allan Gilmour was named president of Ford Automotive Group in March, 30 years after joining Ford Motor Co.

Ford's Gilmour cultivates 'car guy' image

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Don't call Allan Gilmoura bean counter. The new president of Ford Motor Co.'s Automotive Group is trying to shed his image as a finance man and take on a "car guy" persona.

Two weeks ago, Gilmour was spotted driving a host of competitors' minivan products including the new Toyota Previa, Chevrolet Astro, Mazda MPV and Dodge Grand Caravan around Ford's World Headquarters in Dearborn, Mich.

He then jumped into a Ford Aerostar for comparison. The results of his impressions were shared with several Ford minivan engineers at the test track.

Every week, Gilmour concentrates on one segment of the auto industry by driving a group of Ford vehicles and competitive makes. He then meets with Ford product planners and engineers who work on present and future vehicles in that segment.

"It's not done in a terribly analytical or objective way. It's Gilmour's emotions," he said.

"We talk about where we are, what our cycle plan is, what we understand of the competition and where we're going."

Where Ford is going is a question that most concerns Gilmour. Improving Ford's quality, lowering soaring product development costs, turning out new products faster and finding the right opportunities for Ford's core automotive and financial services business top his agenda.

Many believe Gilmour is destined to succeed Harold "Red" Poling as Ford chairman when Poling retires in 1993.

For now, the automotive business is Gilmour's chief concern. He became head of all of Ford's worldwide vehicle operations in March during a management shuffle resulting from former Chairman Donald Petersen's retirement. Many believe Gilmour is destined to succeed Harold "Red" Poling as Ford chairman when Poling retires in 1993.

The Vermont-born, Harvard-educated Gilmour has few competitors for Ford's top spot.

The other two members of the Office of the Chief Executive, Ford President Philip Benton, 61, and Chief Financial Officer Stanley Seneker, 59, will be close to retirement age by the time a new chairman is named. Other contenders do not have the wide experience at the company that Gilmour has achieved.

Saab shutters Canada dealer network; GM to assume car sales

By Alex Law
STAFF CORRESPONDENT

TORONTO — Squeezed by market pressures in Europe and North America, Saab Automobile AB will close Saab-Scania Canada Inc. and its 32 dealerships in late summer and will give distribution rights to General Motors.

GM's Passport International Automobiles Division will sell Saabs in Canada beginning Sept. 1.

Passport: Imports for Canada Page 41

The move will allow Saab to devote its limited resources to where they are needed most, including the U.S. market, said David J. Herman, president and chief executive of Saab Automobile.

The agreement comes five months after the creation of Saab Automobile, a 50-50 joint venture in which GM basically took control of Saab-Scania AB's car operations.

At the time, GM said the hookup would have no affect on Saab's U.S. operations. And a spokesman for Saab-Scania of America Inc. maintains that a joint marketing operation is out of the question in the United States. But Herman said last week that the Canadian move is good news for Saab's U.S. dealers.

"You can't fight the battle equally on all fronts," Herman said. He suggested that money that might have been used to build a dealership in Canada can now be used for such things as keeping

Detroit dealers launch auto ad paper

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Metropolitan Detroit auto dealers wanted print advertising at what they consider a reasonable price, so they decided to do it themselves.

The result is *Auto Dealer Direct Car and Truck Marketplace*, a weekly advertising publication that was scheduled to hit 1.4 million Metro Detroit mailboxes Saturday and today.

Auto Dealer Direct is the advertising brainchild of the Detroit Auto Dealers Association. Gordon Stewart, president of the group, said many of their 260 member-dealerships have been priced out of the advertising market, especially since the area's two newspapers, *The Detroit News* and *Detroit Free Press*, entered a joint operating agreement and raised the prices of their ads.

While dealers are expected to continue advertising with the two daily newspapers, said Stewart, *Auto Dealer Direct* will be an advertising alternative for dealers and a supplement for others.

More than 72 dealerships placed full- or half-page ads in one or more of its seven zone editions.

Stewart, who owns Chevrolet dealerships in two Detroit suburbs, said the publication is especially useful to dealers because it offers target marketing at lower costs. Dealers can buy ads targeted to one or more of the circulation area's seven zones.

Joseph Ungaro, president and chief executive officer of the Detroit Newspaper Agency, said he will treat the publication as any competitor. He said the marketplace is only so big, and with all of the competition it stands to reason someone will lose.

"It is our goal to be the one who doesn't lose," Ungaro said.

Auto Dealer Direct will have a minimum of 12 pages. Three of its first week's zones carried at least 32 pages, while the others had at least 16 pages. Stewart said it may expand circulation to newsstands and grocery stores.

Stewart said Detroit area dealers spend from $75 million to $100 million advertising their products annually. *Auto Dealer Direct* is expected to generate at least $12 million in revenue the first year.

The tabloid will have a full-color front and back. The front page will be dedicated to editorial, while the rest of the publication will be filled with advertising. Media, Marketing and Promotion, a direct-mail company in Troy, Mich., will edit and publish *Auto Dealer Direct*.

The first issue's editorial content was devoted to explaining the advertising standards created by DADA, the Better Business Bureau and the Michigan Attorney General's Office.

Imports top U.S. makes in anti-lock brake sales

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — The installation rate of anti-lock brake systems on 1989 imported cars sold in the United States was three times as high as on U.S.-built autos.

Some 12.97 percent of 1989 imported cars sold in this country were fitted with ABS, compared to 3.96 percent of U.S.-built cars. Import numbers reflect sales of 1989-model-year cars, and U.S. numbers are based on 1989-model production.

But as technological advances in ABS reduce the size and price, the trend is for ABS application to spread top-to-bottom through all manufacturers' model lineups.

ABS was installed on 339,116 of the 2,615,369 1989-model import cars sold in the United States. On the U.S. side, 279,801 of the 7,067,627 1989 cars produced had the feature. The data were compiled for the *Automotive News Market Data Book*, which will be published May 30.

Leading the way for 1989-model imports were European makers Mercedes-Benz, BMW, Jaguar and Sterling, all with 100 percent ABS application.

Acura was the top Japanese nameplate; nearly 40 percent of the 1989 Acuras sold in the United States were equipped with ABS.

By comparison, General Motors installed ABS on 5.71 percent of its 1989 cars, and Ford put it on 4.92 percent.

Nissan put ABS on 10.90 percent of its imported 1989 cars; Mitsubishi had it on 4.98 percent; and Toyota installed it on 3.90 percent.

Honda did not put ABS on any of the 1989 imported cars it sold in the United States.

The new Nissan Infiniti and Toyota Lexus were not included in the survey because they were introduced as 1990 models. Mazda did not provide figures.

BIG DEALERS

FROM PAGE 1

center, as well as listening to customers and servicing their needs.

"We went back to the basics," Kapson said. "The key really is taking care of your customers. In retail sales, we have 55 percent repeaters, and we haven't lost a single major fleet customer in five years."

In addition to the Ford dealership that put together the big numbers, Kapson also has Toyota, Volvo and Mitsubishi franchises on his 45-acre site.

While Kapson and Jordan Ford rang up big numbers selling one make, the dealership that moved into second place in total dollar sales was Prospect Motors in Jackson, Calif.

Dealer W. E. "Bill" Halvorson placed among the top 10 franchises for all five of the General Motors passenger-car makes: Buick, Cadillac, Chevrolet, Oldsmobile and Pontiac.

In addition, Halvorson reported that he has an interest in a Chrysler-Plymouth-Dodge-Jeep-Eagle dealership — Amador Motors in Sutter Creek, Calif. — that is on the Dodge list.

At Prospect Motors, Halvorson reported that he sold a five-make total of 45,256 GM vehicles, most of them fleet sales. In addition to the GM makes, Prospect Motors also sells Toyotas.

Halvorson's feat was unique, although 22 dealers had two or more top-selling franchises. Some had two same-make franchises on the same top-10 list: Dealer Al Courter had two Acura franchises on that list; Stewart Evans had two on the Lincoln-Mercury list; and Michael Schudroff had two on the Rolls-Royce list, as did Norman Braman.

Penske Corp.'s Longo Toyota dealership in El Monte, Calif., had 15,893 retail deliveries last year, the most by any franchise in 1989. It was the fourth consecutive year that Longo Toyota was the franchise with the highest retail sales in the United States.

Last year, Longo also developed its fleet business into another 7,165 units, for 23,058 total new-unit sales.

The No. 1 dealer in used-vehicle sales was Ricart Ford in Columbus, Ind. Ricart was also the No. 2 franchise in new retail sales, with 11,344 deliveries in 1989.

Lustine Chevrolet in Hyattsville, Md., reported the most parts and service business last year — $39.4 million. No. 2 was Friendly Chevrolet in Dallas, and the third spot went to Longo Toyota with $21.3 million in parts and service sales.

Again in 1989, there were strong regional trends, with East and West coasts having a disproportionate number of the top-selling franchises. The regional strengths reflected strong vacation and travel markets for dealerships that emphasize fleet sales to daily rental companies.

There were also pockets of strength in the Midwest, notably for the traditional Big 3 makes, as well as in the Northeast and Southwest, where import dealerships fared well.

California remained the state leader with 84 of the top 310 franchises.

Florida had 39 of the top 310 franchises, and Illinois accounted for 24 of the top performers.

The New York area had 54 of the largest franchises, including 25 in New Jersey, 20 in New York state, eight in Connecticut and one in Vermont. In the middle of the Eastern Seaboard, the Washington area had 20 top franchises — nine in Maryland and 11 in Virginia.

The 1989 listing — the fourth annual — is very similar to the earlier compilations. The leaders for 17 of the 31 makes were repeaters from 1988.

New car stockpile shrinks to 65-day supply in April

U.S. makers pare vehicles, imports up

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

A continued decline in domestic new car inventories helped keep overall car inventories in check during April.

Combined May 1 inventories of domestic and imported new cars totaled 2,102,016, a 65-day supply. That compares with a 68-day supply on April 1 and a 70-day supply on May 1, 1989.

Domestic-car inventories dropped from a 64-day supply on April 1 to a 60-day supply on May 1, but import inventories increased to an 82-day supply from a 79-day supply for the same period.

On May 1, 1989, domestic automakers had a 69-day supply on hand, while importers were storing a 72-day supply.

Industry sales for March were 850,925; April's totalled 802,557.

The Big 3 automakers either saw their inventories drop or hold steady from the April to May period.

Ford Motor Co. fared the best. Its inventories, including captive imports, as of May 1 stood at a 59-day supply, compared with a 67-day supply in April. General Motors' inventories dropped from 68 to 62, while Chrysler's stood pat at 77.

The luxury car divisions of the Big 3 appeared to suffer the most. Cadillac's days' supply rose 48 percent from April 1 to May 1 — from 50 days to 74 days. Days-supply figures for all other GM car divisions declined.

The supply of Cadillac Allantes stood at 154 days, the highest of any GM car.

There was a 107-day supply of Allantes on April 1.

Other GM cars with a more than 100-day supply were the Cadillac Brougham and the Buick Reatta and Electra.

There was a 91-day supply of Chevrolet Corvettes.

Ford saw its inventories of Lincolns rise from a 41-day to a 46-day supply from April to May. Most other makes of Ford cars dwindled.

The Probe, with a 113-day supply, headed Ford's list of unsold models.

A drop in production helped to decrease the inventory rate of the Dodge Monaco by 31 percent, but there still was a 294-day supply of the car on May 1.

Other Chrysler models sitting heavy were: Eagle Premier, 172-day supply; Chrysler Fifth Avenue (fwd), 106-day supply; Chrysler Imperial, 143-day supply; and New Yorker C, 100-day supply.

The May 1 supply of imports rose to 679,880 from 668,662 in April.

Honda was the only importer to see its combined stockpiles dwindle.

Honda had a 41-day supply, the lowest of any automaker, down from a 46-day supply April 1.

Mazda suffered the most. Its inventories of imported and U.S.-built cars climbed 25 percent, and its inventories of U.S.-built cars rose 36 percent.

The stockpile of the U.S.-built Subaru Legacy models dropped from a 440-day supply on April 1 to a 352-day supply May 1.

Washington finds Big 3 draw higher rate of lemon beefs

By Helen Kahn
SENIOR CORRESPONDENT

Motorists in Washington state are more likely to have serious problems with Big 3 products than with vehicles built by leading Japanese makers, according to the state's new lemon law report.

Owners of Big 3-built vehicles filed 76.93 percent of the 494 claims accepted under the state's lemon law arbitration program in 1988 and 1989, the state said. Big 3 makes accounted for 57.58 percent of the market.

In contrast, owners of Toyota, Honda, Nissan and Mazda products were were involved in just 8.91 percent of the claims. The Japanese "Big 4" held 28.55 percent of the market in the state.

Other imports did not fare as well. Peugeot, for example, accounted for 11 claims — as many as Toyota. But Peugeot held only 0.21 percent of the market. There were five claims against Yugo, which accounted for 15 of every 1,000 vehicles sold.

The state based its market share calculations on car and truck registrations for 1985 to 1989.

The report was the first covering the state's second-generation lemon law. Benefits to consumers during the first two years totaled over $5 million.

The tougher lemon law created a state-run arbitration program using a pool of attorneys as arbitrators and a pool of mechanics. It also included a broad consumer education program and garnered manufacturer and dealer support.

A "lemon" is triggered when there are four or more failures to repair (two or more for a serious safety defect), or when a vehicle is out of service for 30 days.

The law also requires that the vehicle's former status as a lemon be disclosed upon resale.

In 1988, 351 consumers requested state-run arbitration. More than 48 percent of the cases were settled when consumers were awarded replacement vehicles or their cars were repurchased. The rest were ineligible or the cases were incomplete. Cumulative settlements and awards exceeded $2.75 million.

During 1989, 262 consumers sought state-run arbitration, and 55 percent won replacements or refunds. Some of the remaining claims were denied; others were in process at the end of the year.

Awards and settlements for 1989 exceeded $2.5 million.

The state surveyed consumers who asked for information but did not request state-run arbitration and found 18 percent intended to file a claim. It also found 35 percent had reached satisfactory settlements with the manufacturer — a "clear indication" the law is helping new-car buyers, the state said.

WASHINGTON LEMON LAW CLAIM COMPARISON

Table compares percentage of lemon law claims accepted for arbitration to vehicle market share for Washington state. Companies with less than 4 percent market share are not included.

Make	Pct. of claims	Pct. of sales

Infiniti ad pair tackles Pontiac

CRAIN NEWS SERVICE

Bill Heater and Don Easdon, the creative team behind Nissan Motor Corp. in U.S.A.'s initial Infiniti campaign, loaned their creative spark to Pontiac.

Agency sources say they were hired on a free-lance basis by ad agency D'Arcy Masius Benton & Bowles of Bloomfield Hills, Mich., to provide ideas for Pontiac.

Easdon confirmed the nature of the assignment but declined to disclose the client or the agency.

Heater, who also wouldn't discuss specifics, said the agency asked several outsiders for creative input. He described their role as "sort of like cannon fodder."

It is unclear if the work, completed in April, will be produced.

— Gary Levin

Racing-wise Pontiac reshapes Grand Prix

PONTIAC, Mich. — Pontiac will use a design born for racing when it restyles the Grand Prix for 1993.

Byron Warner, Pontiac chief engineer, said the car will have a larger, more square rear deck area to enhance aerodynamic downforces achieved at racing speeds.

"We try to influence the shape of (future) production cars for our racing. It's an easy deal," Warner said. "We explain to the design staff what works well, and that influence will be seen quite a bit on the new Grand Prix. We picked a new look that's aerodynamically effective relative to downforce."

Look for the Grand Prix also to have a lower roofline and a more rounded nose, seen most graphically on the 1991 Firebird.

— Dutch Mandel

Mitsubishi engines recalled by EPA

WASHINGTON — The EPA said 102,000 1986-model cars with 1.5-liter Mitsubishi engines have been recalled for exceeding emissions standards.

The recall affects about 20,000 Mitsubishi Mirage models and about 80,000 Dodge Colts and Plymouth Colts, the agency said. Dodge, Plymouth and Mitsubishi dealers will perform repairs on their nameplates.

Carburetors will be modified, automatic chokes will be recalibrated, and secondary air filters will be checked.

— Diane Kurylko

Put this computer system to work and your dealership will handle like a dream.

With software customized for your specific needs by a Value-Added Reseller, and Texas Instruments hardware designed to handle your growth, you'll wonder how you ever got along without it.

What the auto dealership needs today is one solution for Sales, Service, Parts, and the Business Office. One system that computerizes each department while giving you what you need most. Control.

And that's exactly what this dealership system is all about. It's a total system solution from a computer company that's been in the automotive business for over a decade. And it puts you in the driver's seat.

TI Value-Added Resellers will help steer you in the right direction.

Your system's software can be designed for each department's needs and the dealership as a whole, and comes from an automotive market expert who knows about TI's full range of technologically advanced products. No matter what size your operation, small, medium or multifranchise, TI can provide you with the right hardware. TI has a system that can handle your needs today, and expand for tomorrow as your needs grow. Our service and support people are easy to work with too. Our network stretches from coast to coast and features four-hour response time in many locations, among other options.

But the real story is its superb handling. Get behind the wheel of a Texas Instruments system, and you'll find your dealership will drive a lot smoother. In fact, it'll handle like a dream.

Call 1-800-527-3500 for the TI-authorized reseller specializing in automotive dealership systems nearest you.

DOWNTIME

FROM PAGE 1

despite the fact that one of the Big 3 could be hit with a strike. The UAW's contracts with GM, Ford and Chrysler Corp. expire Sept. 14.

Domestic automakers have kept production more in line with sales during the 1990 model year than they have in recent years. And dealers, whose profits have been squeezed, have kept their ordering and inventories in check as well.

Domestic new-car inventories declined even further last month. Stocks of U.S.-built cars represented a 60-day supply on May 1, down from 64 days on April 1.

Because of leaner stocks and already-rich incentives, dealers don't expect automakers to offer massive incentives to clean up leftover inventory this summer.

But they are optimistic that the automakers, who already are paying record amounts in incentives, will offer some type of cleanup program.

The manufacturers have given no indication of what they will do for the cleanup.

GM has said it will pay dealers a carryover allowance, money paid to dealers for vehicles left in their inventory when the new model year begins.

GM will pay 5 percent of the sticker price of 1990 vehicles sold after the 1991 model year starts.

But GM has stipulated that a dealer can surrender all or part of the carryover allowance to participate in an end-of-model-year promotion, if one is offered.

Ford and Chrysler dealers are waiting to hear what the companies will do about a carryover allowance this year.

Dealers say their ordering will depend on what the companies do in that regard.

KEARNS

FROM PAGE 2

Kearns said he will seek an injunction against Ford enjoining the automaker from manufacturing any of the devices or using any facilities or data it has acquired in relation to the wipers.

He said he will accept no out-of-court settlement.

Kearns said he will allege "they took away the business opportunity from me" in his next complaint.

Kearns, 62, said he never had any intention of selling his idea to Ford, the first automaker he approached with his idea back in 1963.

He said he wanted to secure Ford as a customer so that he could start his own factory to produce the windshield wipers.

He said Ford has earned $558 million on the wipers.

"They used my income to build their plants.

"If I only receive reasonable royalties, then I am only an employee of Ford as opposed to being a businessman."

Kearns says he has spent at least $1 million "easy" on legal fees but intends to carry his legal battle through in hopes of protecting all inventors.

He said the new trial should start in six to eight weeks.

Ford argued that Kearns patents were invalid because his ideas were disclosed in patents previously issued to other inventors.

PRODUCTION

Output dives for trucks, cars in April

By Karen Detkowski
AUTOMOTIVE NEWS STATISTICIAN

U.S. automakers in April produced 509,264 cars, 17.92 percent below the prior month and 20.08 percent below the year-ago month. April's production was the lowest since 1982, when 474,222 cars were assembled.

Last week's car production estimate was 138,863, 4.20 percent above the previous week but 13.06 percent below the year-ago week.

Truckmakers assembled 338,971 units in April, 14.04 percent below the March total and 7.97 percent below the year-ago figure.

Truck production was scheduled at 92,172 units last week, 0.16 percent above the prior week and 2.52 percent above the same week in 1989.

Companies shared last week's scheduled production as follows: General Motors, 43.48 percent; Ford Motor Co., 25.79 percent; Chrysler Corp., 12.10 percent; Honda of America Manufacturing Inc., 6.47 percent; New United Motor Manufacturing Inc., 3.56 percent; Toyota Motor Manufacturing U.S.A. Inc., 3.19 percent; Diamond Star Motors Corp., 2.14 percent; Mazda Motor Manufacturing (USA) Corp., 1.82 percent; Nissan Motor Manufacturing Corp. U.S.A., 1.13 percent; and Subaru-Isuzu Automotive Inc., 0.32 percent.

GM last week scheduled overtime at the Janesville, Wis., plant on Friday and the Detroit-Hamtramck, Mich., plant and the Lansing, Mich., A-line on Saturday.

Ford scheduled daily overtime last week at the Wayne, Mich., and Wixom, Mich., car plants and the following truck plants: Kansas City, Mo.; St. Paul, Minn.; Norfolk, Va.; Lorain, Ohio; St. Louis; and Louisville, Ky. Louisville also was slated for Saturday overtime.

Chrysler's St. Louis No. 1 plant (Daytona and LeBaron J) continues to operate on a single eight-hour daily shift during May.

The St. Louis No. 2 minivan plant and the Dodge City Warren, Mich., truck plant were scheduled to work overtime last Saturday.

Totals plunge in Canada, too

Canadian automakers produced 83,209 cars in April, 20.63 percent below the previous month and 2.44 percent below the year-ago month.

April truck production was 77,300 units, 13.90 percent below the prior month and 6.31 percent below the year-ago month.

Last week's scheduled car production of 27,575 units rose 7.30 percent above the prior week and 41.77 percent above the 1989 week.

Estimated truck production of 20,485 units last week was 1.52 percent more than the previous week but 4.74 percent below the year-ago week.

Chrysler reopened the Bramalea, Ontario, facility last week after a five-week shutdown because of high inventories of the Dodge Monaco and Eagle Premier.

Satellite system to link GM, dealers

Pulsat will include video, print data

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors plans to hook up its 9,700 dealers to a new satellite communications system by the end of 1992. GM claims the system will be the world's largest private satellite network.

GM will pay for the installation of a satellite dish at each dealership to send and receive information. GM said the rates will be the same as dealers now pay for the land-based dealer communications system.

The new system, called GM Pulsat Network, will provide faster transmission of information between the automaker and its dealers.

In addition to the two-way data transmission that GM now has with its land-based system, the new satellite network will add video transmission.

Video now is available only to the 2,100 GM dealers who subscribe to the Automotive Satellite Television Network, an independent television programming network for the car dealers. GM now airs programs on ASTN three times a week.

Duncan Brodie, general director of dealer systems and communications for the GM customer sales and service staff, said the land-based system GM now uses to communicate with its dealers is reaching the limit of its capacity. The efficiency of the system has decreased while the cost has increased, he said.

The land-based system, which uses telephone lines, started in 1976 with 13 applications. Today's system has 200 applications including information on products, parts, service, dealer orders and warranties.

Brodie said another 63 applications have been proposed for the new system. Future applications could include electronic shop manuals, electronic vehicle invoicing and next-generation vehicle diagnostics.

Dealers say GM needs a new communica-

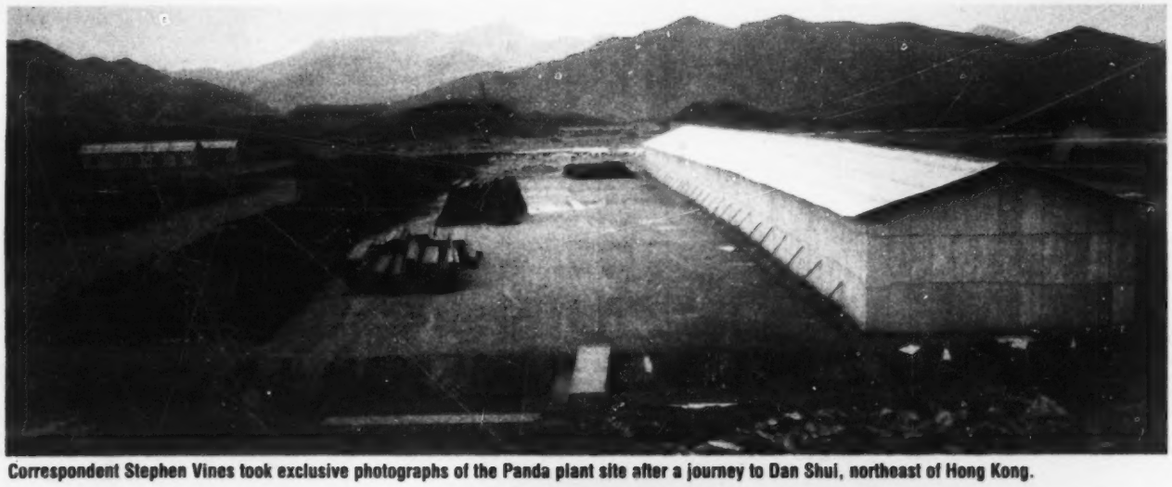
THE PATH TO PANDA



Correspondent Stephen Vines took exclusive photographs of the Panda plant site after a journey to Dan Shui, northeast of Hong Kong.

Writer's triumph: A brief glimpse of shy car firm

By Stephen Vines
STAFF CORRESPONDENT

DAN SHUI, China — The Chinese Panda is an elusive creature that goes out of its way to avoid humans. That may help explain why Panda Motors Corp. was so named.

Like the pandas that stalk Szechuan province, Panda Motors Corp., with its strong ties to the Unification Church, is very hard to find. It, too, is based in an obscure part of China and seems to have its own ways of avoiding humans of the reporter species.

News of the company's establishment came shortly after last June's massacre of pro-democracy demonstrators in Beijing's Tiananmen Square. Foreign investors were leaving the country, and China's government appeared friendless in the Western world.

Little wonder, therefore, that the authorities bent over backward to endorse a plan for a foreign company to build the nation's largest car factory.

China indicated that the investment was being made by an American company but, as inquiries by *Automotive News* revealed, the project is backed by the Rev. Sun Myung Moon's Unification Church of South Korea. Nevertheless, Panda is based in the United States and has a mixture of Koreans and Americans on its board of directors.

Getting information was difficult from the start. When *Automotive News* showed an interest in visiting the site, communications became even more strained.

The first approach was made in February to the company's Hong Kong office run by a Mr. Okomoto. He appears to be a busy man and was unable to discuss matters over the

Chrysler puts dealer spiff on minivans

By Arlena Sawyers and Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTERS

Caving in to dealer pressure, Chrysler Corp. last week placed a $500 factory-to-dealer incentive on its 1990 Plymouth Grand Voyager, Dodge Grand Caravan and Chrysler Town & Country long-wheelbase minivans.

The issue came to a head during meetings of the national dealer councils and Chrysler executives earlier this month. Verbal requests were followed by written requests last week, and on Thursday dealers were notified of the rebate program in a satellite telecast.

The dealer incentive expires July 17.

While some dealers applauded the move, one Chrysler-Plymouth dealer complained that the com-

Palladium use in catalysts linked to cost

By Jack Keebler
AUTOMOTIVE NEWS STAFF REPORTER

Platinum-free catalytic converters based on palladium are here, and they could save the Big 3 automakers $300 million a year if world political and economic factors do not inflate prices or limit the availability of palladium.

Currently, only a small percentage of worldwide palladium output is mined in the United States. Eighty percent of the world's supply of platinum-group metals comes from politically sensitive sources: South Africa and the Soviet Union.

Researchers also are concerned that any price advantage of palla-

Dealers rally to help locate missing son of Ford salesman

Greg Bowens
SPECIAL CORRESPONDENT

At 3 p.m. on Tuesday, May 8, new-car salesman Geoffrey Roberts was on the showroom floor at Big Country Ford in Clovis, N.M.

He was unaware that his 6-year-old son, Matthew, weakened by chicken pox, had just wandered away from home and disappeared, clad only in a blue soccer shirt, shorts and tennis shoes. Matthew was still missing 10 days later.

Matthew Roberts, 6, vanished earlier this month in New Mexico.

Immediately after they discovered that he was gone, Roberts and his wife Debbie began a frantic search of the neighborhood.

The news spread quickly and by 8 p.m. Big Country Ford, town police, and local news media had mustered about a third of the town's 35,000 citizens to canvass the city. They searched in vain that night and the following day.

Local dealers started a reward fund and solicited help from Ford Motor Co., the National Automobile Dealers Association and the New Mexico Dealers Association.

The case has also been featured on Fox television's "America's Most Wanted."

Everett Hagelgantz, owner of Big Country Ford, said he contacted representatives of Ford Motor Co. Credit to see what assistance the automaker could offer.

Ford Division spokeswoman Della Dipietro said last week the company will make a donation of an undetermined amount to the reward fund.

"In terrible situations like this you have to move fast. Ford is going to help," she said.

The reward fund, initiated by the Clovis New Car Dealer Association, had grown to $14,800 last week.

Clovis dealers purchased local radio spots, and the New Mexico State Dealers Association plans to distribute flyers with Matthew's photo and description to its members.

"When you work with someone you form a bond with them," said Gary Westfall, the dealership's general manager.

According to Westfall, that bond has spurred executives of the Ford dealership to establish funds separate from the "Matthew Roberts Reward Fund" to help the Robertses cope financially — they have not worked since their son's disappearance — and to link with a national network used to help find missing children.

NADA director for New Mexico, Jack Price of University Volkswagen in Albuquerque, said he had not heard the about dealers' efforts, and did not know what the association would do to help Roberts.

The New Mexico dealers encourage anyone with information about Matthew Roberts to call the Clovis Police Department at (505) 769-1921, or the National Center for Missing and Exploited Children at (800) 843-5678.

Dodge Viper, a "back-to-basics" sports car to be powered by a V-10 engine, was first seen at auto shows in 1989. Recent artist's rendering shows side exhaust pipes, roll bar and twin fuel fillers on rear deck.

Dodge Viper gets green light

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Corp. said last week it will produce 200 to 500 Dodge Viper sports cars by January 1992.

The Viper is planned as a Dodge image model just as the Corvette ZR-1 leads the Chevrolet marque. Chrysler said volume of the two-passenger Viper will increase, but not beyond 5,000 units annually.

Chrysler Corp. Chairman Lee Iacocca made the announcement Friday in Los Angeles.

The company said the limited-edition Viper will be be powered by Chrysler's V-10 engine being developed for full-sized Dodge pickup trucks.

Chrysler said its Lamborghini engineering subsidiary will assist in casting the Viper V-10 from aluminum. The engine reportedly has a displacement of 7.0 liters.

Performance targets include more than 400 horsepower and 450 pounds-feet of torque.

The company continues to test a high-performance V-8 engine that may be available in future Viper models as a lower-cost option.

The company has not said how the initial 200 to 500 Vipers will be distributed among its 3,000 Dodge dealers. An allocation system is said to be under development. Price has not been disclosed. Export plans are being considered.

Viper has been a high-profile model for Chrysler since the rear-wheel-drive convertible was first shown to the press and to audiences on the auto show circuit in January 1989.

Chrysler officials have described the response to the ragtop as overwhelming, and the company created a special team in February 1989 to explore production.

Even though Chrysler had not given the official go-ahead on the project, potential buyers have sent cash deposits for the car, said company officials.

Chrysler designers describe the Viper as a back-to-basics high-performance sports car. Styling cues are borrowed from the golden age of roadsters of the mid-1960s.

According to Chrysler, the Viper resulted from a discussion among Robert Lutz, Chrysler Motors pres-

Chrysler shuffles executive lineup

Cappy goes international, Damoose to oversee all company ads

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Corp. last week announced a series of executive shuffles meant to groom the automaker's next generation of management.

The moves affected vice presidents and general managers in Chrysler's marketing, communications and international operations.

Joseph Cappy was named vice president of international operations, replacing Michael Hammes.

Hammes resigned to become executive vice president of Black & Decker Corp. and president of the $2 billion power tools group.

Cappy, 56, had been Chrysler's vice president of brand development. In his new position, he will report to Chrysler Corp. Vice Chairman Gerald Greenwald.

There were also significant changes in Chrysler's recently restructured marketing organization.

John Damoose, who had been vice president of brand marketing, became vice president of marketing with broadened responsibilities. Damoose is now responsible for all of the company's advertising groups.

Previously, brand marketing groups had reported to Damoose, but the corporate advertising group had reported to Arthur (Bud) Liebler, executive director of corporate communications and marketing services.

Under the previous reporting structure, corporate ad campaigns such as Chrysler's highly visible "Advantage: Chrysler" campaign were the responsibility of Liebler. Now, those campaigns will be overseen by Damoose.

Liebler last week was elected vice president of communications, reporting to Thomas Denomme, vice president of corporate planning and external affairs.

Liebler, 47, is responsible for directing all of Chrysler's public relations, internal communications and marketing services activities, including corporate merchandising, business planning and research.

In divisional marketing changes, Lawrence Baker was named general manager of the Jeep-Eagle division and Martin Levine was named general manager of the Dodge car and truck division.

The moves follow on the heels of a November 1989 marketing reorganization. At that time, Damoose was appointed a vice president, Levine was named general manager of Jeep-Eagle and Baker was named general manager of Dodge.

Under the latest round of changes, the corporate advertising group will be part of a newly-created unit announced last week headed by Ralph Sarotte. Sarotte was named director of multi-brand marketing programs. He will report to Damoose and be responsible for cross-brand marketing activities, including media budgeting and corporate advertising.

The naming of Cappy to head international operations gives the former American Motors Corp. executive broadened responsibilities within Chrysler's operations and visibility in an arena of mounting importance. Chrysler wants to expand its global operations and become less dependent on the North American market for profitability.

It is unclear if Chrysler will fill the position of vice president of brand development vacated by Cappy. Chrysler has been trying to streamline its levels of managements.

In his new job, Cappy will be responsible for all of Chrysler's operations outside of North America, including Diamond-Star Motors and Eurostar. Diamond-Star is a joint venture of Chrysler and Mitsubishi Motor Corp. in Bloomington, Ill. Eurostar is a joint venture of Chrysler and Steyr-Daimler-Puch in Austria.

He also has responsibility for Lamborghini, joint ventures with Renault and Fiat and new venture development around the world.

Chrysler spends $2 billion on incentives; sales still fall

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Chrysler Corp. poured $2.1 billion into sales incentive programs last year and spent another $680 million on national and dealer advertising to move Chrysler products.

In spite of that, Chrysler's U.S. car sales fell 14.4 percent and earnings dropped 65.8 percent, from $1.05 billion to $359 million.

Speaking last week at the 65th annual stockholders' meeting here, Chrysler Chairman Lee Iacocca made no excuses for what he called a "tough year."

Instead, and in keeping with his current media message, Iacocca discussed competitiveness, the unfair advantage he believes the Japanese automakers have in the United States and the inability of Chrysler and other domestic automakers to crack Japan's market.

Iacocca criticized the lack of government action on issues affecting the trade imbalance and the decision to place India, and not Japan, on the list of unfair trading partners.

"A few weeks ago, the administration decided not to put Japan on the list of unfair trading nations," he said. "Instead, believe it or not, they condemned India.

"That's easy to understand," he said jokingly. "Just look around and see all the Indian cars on the freeways and all the Indian VCRs in the stores. Count up all the Indian buildings and the businesses that have been bought up by Indians lately. Look at all those Indian banks out there. No question, those Indians are becoming a real economic menace to us."

Only two shareholder proposals were brought to a vote, and both failed. The first, a measure to provide for cumulative voting, was reintroduced by corporate gadfly Evelyn Y. Davis. The measure received 15.4 percent of the votes cast at the meeting and by proxy. Last year, the same proposal garnered 21.1 percent.

A stockholder proposal that Chrysler directors be required to own at least 2,000 shares of Chrysler stock won only 7.3 percent of the shares voted.

Correction

In the May 14 issue and the May 30 *Market Data Book*, Galpin Ford of Sepulveda, Calif., was inadvertently excluded from lists of 1989's largest dealers. Galpin Ford reported total sales of $141.51 million, making it the 16th largest in total dollar sales, and its 6,208 Ford retail sales made it the fifth largest franchise for retail sales.

CAW looks to White knight to lead contract battle

Affable ways cloak tough negotiator

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

TORONTO — In 1952 at the age of 17, Bob White, president of the Canadian Auto Workers Union, got his first real taste of power.

White had been elected union steward at Hay & Co., a UAW-represented woodworking plant in Woodstock, Ontario.

"They gave me a steward button, and I went back in the plant the next day wearing it feeling I had the world by the ass," White wrote in his autobiography. "I changed from a kid whose curiosity had stopped growing in some ways to someone who had responsibilities and a lot to learn."

Today, at age 55, White still has a boyish look and loads of responsibilities — more so than ever, since he engineered the Canadian split from the UAW in 1985.

> "We have tried to organize them (transplants) before, but like in the U.S., the workers are young and have been propagandized. They will come on board, and it's only a short way down the road."
>
> **Bob White**
> CAW president

This summer, he must negotiate a new three-year contract for 90,000 Canadian auto workers.

"Workers are troubled; they're getting pretty damned angry," White says.

He even hints that he may retire from the CAW this year. Those who know him doubt he'll leave, and White himself won't talk about what he would do if he left the union.

But he does talk about his goals for the union. He still wants to organize the three wholly owned Asian transplant factories in Canada, none of which have joined the CAW so far.

"We have tried to organize them before, but like in the U.S., the workers are young and have been propagandized," White says.

"They will come on board," he adds, "and it's only a short way down the road."

It's hard not to believe him. White is a man who likes to chase rainbows, and who likes to overcome adversity.

He is best known for his orchestration of the Canadian divorce from the UAW in 1985, a move that has made him *persona non grata* with UAW leaders in the United States.

"At the point he chose to attack and split the union leadership, I lost a great deal of respect for Bob as both a trade unionist and as a man," says Ernest Lofton, vice president and director of the UAW Ford department.

And while White admits the breakup hurts him, it pales in comparison to the pain

see WHITE, page 38

MODELS: *567 choices today; down 5 from 1989*

By John K. Teahen Jr.
SENIOR EDITOR

DETROIT — With a gain for domestics and a decline for imports, the number of passenger-car models offered in the United States is just about the same as it was a year ago.

The annual *Automotive News* tabulation finds 567 models today, compared to 572 last year. The current fleet consists of 278 domestic entries, up 23 from last year, and 289 from overseas, down 28.

The increase for the domestics came mainly from Japanese transplant and joint-venture operations, which added 13 models. On the Big 3 side, General Motors is up eight, and Chrysler Corp. is up two.

Ford Motor Co. is unchanged, a marvel of consistency. Not only is its total the same, every one of the company's domestic nameplates has exactly the same model lineup as it did at this time in 1989.

Biggest changes among the imports are a loss of eight models by Isuzu and a drop of seven by Nissan. Isuzu discontinued its I-Mark line and now has only one Impulse model. Nissan scuttled its Axxess wagons and dumped a Pulsar

Light-truck tailpipe proposals worry makers

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Proposals in the Senate and House clean air bills threaten to set considerably tougher pollution standards for light trucks that automakers say could wreak havoc on a lucrative market.

Both bills would require that base pickup trucks, stripped vans and small sport-utilities adhere to the same pollution standards as passenger cars.

While automakers acknowledge that the smallest trucks do indeed resemble passenger cars, engineers for the Big 3 worry that some of the strict standards proposed for bigger light trucks in the Senate version can't be met.

The Senate version would require that pollution systems on the bigger light trucks meet stricter standards for 10 years or 120,000 miles, while the House bill loosens standards after 50,000 miles and exempts vehicles from testing after 75,000.

Engineers said they can't build a truck to run that clean for 120,000 miles, or perhaps even for 75,000, as the House would require.

If the Senate truck requirements prevail, that could spell trouble for automakers, whose profits have been bolstered over the past several years because of the growing popularity of light trucks.

"Trucks are already close to being cars in terms of size and weight. If we build trucks to pass car (emissions) specifications, they would have no durability or goad carrying capacity, or be so streamlined they would be a car rather than a truck," said Gordon Allardyce, executive engineer for certification and regulatory programs at Chrysler Corp.

"We don't know how to do it, and that's why we are so reluctant to accept the provision," he said.

Charles Gray, director of the EPA's control technology division, is surprised by the industry's protests. A lot of the targeted vehicles have the same engines as cars, so trucks should be able to meet the standards as easily, he says.

The House is expected to begin debate on its bill this week. Once approved, negotiators from both bodies of Congress will meet to agree on a final clean air bill.

The conference will be Detroit's last chance to push for a change, and the light truck issue rides high on the list of priorities, said Kelly Brown, executive engineer of fuel economy and emissions control at Ford Motor Co.

The popularity of light trucks and their acceptance as affordable transporation rather than a work vehicle is what captured Washington's attention.

Currently, light trucks have much looser emissions regulations than passenger cars. But trucks must meet those standards for 10 years or 120,000 miles. Passenger

House begins clean-air debate

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The threat of mandated production of alternative-fueled cars hangs over automakers as the House prepares to debate a clean-air bill this week.

House negotiators last week failed to reach an accord that would avert a proposed amendment to mandate the sale of one million alternative-fueled cars.

Rep. Henry Waxman, D-Calif., a staunch environmentalist, has promised to introduce the measure. It would apply to the nation's nine smoggiest cities.

The 500-page clean-air bill, which is expected to come before the full House today, would only require automakers to certify that they can build alternative-fueled vehicles but doesn't mandate production.

Rep. John Dingell, D-Mich., who has been championing Detroit's concerns, met with Waxman and other congressmen in an attempt to thwart a floor fight on alternative fuels.

To sway support against Waxman and his environmental coalition, the Motor Vehicle Manufacturers Association last week ran dramatic full-page ads in a Capitol Hill tabloid. One suggested that the amendment could doom alternative fuels by forcing unproven technology upon reluctant consumers. It urged, "Congress: Don't Kill the Clean Car!" and featured a tombstone that read, "Here Lies A Good Idea."

AIADA, magazine honor Jackson as All-Star Dealer

WASHINGTON — Michael Jackson of Euro Motorcars in Bethesda, Md., has been selected the national 1990 Sports Illustrated All-Star Dealer.

Jackson, who sells Mercedes-Benz, Acura, Saab and Rolls-Royce at two dealerships in the Washington area, has been an import dealer for 11 years.

He will be honored at a banquet tonight during the American International Automobile Dealers Association's Automotive Congress here.

Sports Illustrated and AIADA said Jackson was chosen "for his significant contributions to both the international automobile industry and to his community."

The association cited him for his role in the fight to eliminate gray-market autos, which culminated in the Imported Vehicle Safety Compliance Act.

Jackson was one of seven dealers nominated for the award. He was chosen as the national winner by a panel of professors and deans of graduate business schools.

The other regional winners were: Sidney B. Deboer of Medford Honda in Medford, Ore.; Neil Huffman of Neil Huffman Nissan in Louisville, Ky.; Gary N. Olin of Qua Mazda-Saab in Bedford, Ohio; Fred Miller of Miller Imports Nissan in Van Nuys, Calif.; Larry Miller of Larry Miller Toyota in Murray, Utah; and William D. Ray Jr. of Baird-Ray Nissan in Longwood, Fla.

Early May sales off 8%; Big 3 dip, transplants gain

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Like Dr. Jekyll and Mr. Hyde, sales of U.S.-built new cars seem to shift from one personality to another, producing hope then despair.

Reversing the gain in the last 10 days of April, sales of domestic cars and trucks in the first 10 days of May dipped 8.03 percent from the same period a year ago.

Europeans fret about profitability, Page 54

Sales totaled 300,824 vehicles — 185,833 cars and 114,991 trucks. Car sales were down 9.66 percent; truck sales skidded 5.25 percent.

Each of the Big 3 reported a decline; each of the Japanese transplants reported an increase.

Chrysler Corp. took the biggest sales dive. Its car sales were off 23.02 percent, and its truck sales dipped 15.13 percent.

The only Chrysler car line to show a sales increase over the first 10 days of May 1989 was the Plymouth Laser. Dealers sold 1,345 Lasers, a jump of 126.05 percent.

Chrysler's Eagle Premier/Dodge Monaco twins saw little sales interest. Premier sales tumbled 63.41 percent; only 375 were sold during the first 10 days of May. Monaco, didn't fare even that well, 133 going out dealer doors.

Ford didn't have much to boast about either. Its car sales were down 17.89 percent, and its truck sales were off 8.97 percent. Every Ford and Mercury car nameplate suffered a sales decline.

The Lincoln Town Car was Ford Motor's big winner. Its sales rocketed 81.10 percent. Sales of Continentals were up slightly, to 1,345 from 1,323 last year.

General Motors's suffered the least of the Big 3. Its total vehicle sales were down 8.70 percent for the period. GM's truck sales rose 1.45 percent, but its car sales tumbled 13.58 percent.

Pontiac was its biggest loser, down 26.10 percent. Sales of every Pontiac nameplate declined for the period.

Chevrolet was the only GM division to post a gain, a modest 0.58 percent. Sales of the Geo Prizm remained strong, increasing to 3,239 from 2,292 a year ago, a gain of 41.32 percent. Sales of the redesigned Caprice soared 39.38 percent.

Among the transplants, Mitsubishi Eclipse sales jumped to 1,776, a 155.91 percent increase over last year. The Eclipse is a sister car to the Chrysler Eagle Talon, which had 856 sales for the 10-day period, and the Plymouth Laser, which had 1,345.

Chester Phillips, general manager at Bob King Mitsubishi in Winston-Salem, N.C., said he can't keep enough Eclipses on hand. "I think it's just a well-designed car," he said. "Inventory is short; I need some more."

Toyota sold four times as many U.S.-built Corollas and three times as many U.S.-built Camrys as it did in early May last year. Combined sales of the two lines were 9,118 compared to 2,624 in 1989.

Sales of U.S.-built cars were up 32.31 percent for Honda, 66.72 percent for Mazda and 47.22 percent for Nissan. Nissan's truck sales rose 39.59 percent.

Europe probes Austrian aid in Chrysler-Steyr van deal

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — The European Commission is investigating charges that the Austrian government provided excessive support to Chrysler Corp.'s joint minivan production venture with Steyr-Daimler-Puch Fahrzeugtechnik in Graz, Austria.

A commission spokeswoman in Brussels, Belgium, confirmed that an inquiry is under way, but she declined to give details or to confirm rumors that the probe was sought by Regie Nationale des Usines Renault S.A., maker of the competing Espace minivan.

The commission, which applies competition rules approved by EC member nations, can block government aid packages it judges to be a anti-competitive.

While Austria is not a member of the European Community, the commission believes it has jurisdiction because 95 percent of the Austrian production would be exported to the community.

Chrysler and Steyr plan to begin building Voyagers in Europe in June 1991. The 50-50 joint venture, known as Eurostar GmbH, expects to produce 25,000 minivans annually at first, rising to 125,000 within five years.

Federal, state and local government units will pick up one-third of the investment cost of 4.33 billion Austrian schillings ($375 million). The first phase, providing capacity for 25,000 to 30,000 units, will cost 1.6 billion schillings ($138 million).

Chrysler Chairman Lee Iacocca has called the project a "three-way partnership between Steyr and Chrysler and the Republic of Austria."

The spokeswoman for the EC competition office confirmed that the matter is "under investigation." She added, "I wouldn't say this is routine, but it is quite a normal case."

She said the parties will be informed when the inquiry is completed, "but in the case of Chrysler, at the moment nothing can be said."

She declined to speculate on how long the investigation might last and would not confirm that it was instigated by Renault, whose Espace has long been the only minivan on the European market.

Nonetheless, a Chrysler official in Europe remarked that "there is a likely connection there."

"That's crazy," said a Renault spokesman. "It is absolutely not true. Can you imagine? We are a partner with Chrysler." Renault is Chrysler's partner in the JJ small Jeep production venture in Spain.

Michael Lutsch, project director for Eurostar and former manager of Chrysler's assembly plant in Bramalea, Ontario, said, "The discussions are between the Austrian government and the EC. We have not been contacted. As far as we are concerned, everything is on schedule."

But Lutsch said the joint venture has provided information to the Austrian government showing that the incentive package is in line with that offered by other countries and is lower than many.

UAW meets to prioritize demands

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Some 2,000 UAW delegates will gather in Kansas City, Mo., this week as the union begins the task of choosing the most important points for this summer's negotiations with the Big 3.

UAW President Owen Bieber has said for months that job security will be the No. 1 issue. Just how the union will try to achieve that goal is another question.

"That problem will be front and center," said former UAW President Douglas Fraser.

Fraser

Workers now have protection if they lose their jobs because of new technology. "But what happens when you have volatility in the marketplace; that's what's missing from job security," Fraser said.

Workers thought they had security under the current contract, which was signed in 1987 and expires Sep. 14. In that contract, the automakers agreed to a moratorium on plant closings except for slow sales.

Since 1987, General Motors has idled three plants and plans to shutter another one in August due to poor sales. Chrysler has closed two plants and plans to close another in September.

> "I don't think Bieber understands what COLA on pensions means to the membership. This would open up thousands of jobs."
>
> **Dave Yettaw**
> UAW Local 326

Bieber told delegates at a skilled trades conference in April that workers should not have to bear the full brunt of the automakers' lost market share.

"America's industrial challenge is not a little bit management's fault and a little bit union's fault," Bieber said. "It's management's failures, plain and simple, that have put us in the precarious situation we face in so many sectors today.

"In this year's negotiations, we must demand a fundamental reorientation in management's approach to union-represented workers," Bieber said.

Bieber

Other big issues that are expected to be debated this week include overtime, outsourcing, cost of living allowance on pensions, mandatory vacations, cuts in the international union staff, joint programs, supplemental unemployment benefits, health care costs and union representation on company boards.

Skilled trades delegates approved two resolutions at their convention that could help ease the decline in rank-and-file jobs: mandatory vacations and cuts in overtime.

They also rejected a proposal calling for COLA on pensions, an issue that top union officials, including Bieber, have said may be too costly.

"I don't think Bieber understands what COLA on pensions means to the membership," said Dave Yettaw, president of UAW Local 326, a GM local in Flint, Mich. "This would open up thousands of jobs."

A hot debate on the issue is expected because GM recently proposed that the pensions of retiring Chairman Roger Smith and other top executives be doubled.

"GM's greed is exceeded only by its insensitivity," Fraser said. "I empathize with union leaders today because the world is so complex."

SAAB STORY

Dealers chided for slighting customers

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Robert J. Sinclair has given dealers a royal reprimand after discovering that the customer isn't always king at Saab stores.

The president of Saab-Scania of America shared his displeasure in dealer meetings after "shoppers" posing as customers reported they were treated poorly in some dealerships.

The visits were part of a new program to assess how sales staffs fare in about 32 measures of customer satisfaction. They include greeting customers, demonstrating products and explaining ownership programs.

Members of Saab's dealer advisory council said the overall tone was optimistic, but they could have done without the tongue-lashing.

Sinclair feels Saab's slumping sales will improve if dealers treat customers better.

"People who buy Saabs are intelligent, discriminating people, often including professional people, and they expect to be treated accordingly," Sinclair said after the meetings in Miami and in Colorado Springs, Colo., earlier this month. "People walk in and aren't treated professionally," he said. Saab sales were down 19.7 percent through April, to 10,611.

Some dealers were "quite resentful" about the typically blunt remarks from Sinclair, but they didn't take lasting offense, said Herald Friedley, owner of Friedley Saab in Cedar Falls, Iowa.

Sinclair to dealers: Treat your customers better.

"He (Sinclair) was speaking of some isolated incidents. There were some high-quality, good dealers there, and they felt like they didn't need to hear that," Friedley said last week.

He said one salesman flunked "about 30 out of 32" categories on the shopper test, but others did better.

Council Chairman Felix Boshard said, "The dealers were somewhat taken aback.

"I don't think anybody was particularly riled up about it, but they would have liked a little more positive approach," said Boshard, owner of Charles River Saab in Watertown, Mass.

U.S.-built Cargo line to replace old Ford 'C'

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. is planning a number of changes in its 1991 L-7000/8000 heavy trucks, AeroForce tractors and WorkForce trucks, as well as its F-series medium-duty models.

Ford also plans to phase out its C-series medium-duty, replacing it with the Cargo at its Louisville, Ky., assembly plant.

Ford will stop building the C-series in June, ending its 34-year life. More than 250,000 units have been produced.

The modern Ford Cargo will replace the C series on the production line at Ford's Kentucky truck plant in October. Cargo has been imported from Brazil since 1985.

The Cargo is undergoing significant tooling and sourcing changes as a 1991 model for the U.S. market, a process that will take a year to complete. The vehicle is also sold in other countries.

A wide range of components will be obtained from North American suppliers. They include frame rails, clutches, radiators, fans, fuel tanks, air compressors, alternators, instruments, batteries, mirrors and all glass.

The changes on the Cargo will result in a much greater parts commonality with Ford F-series and L-series trucks, facilitating parts and service availability for customers, according to John Merrifield, Ford heavy-truck sales manager.

The first Kentucky Truck Cargo models will be the CF-8000 with the 210-horsepower, 7.8-liter Ford diesel engine, offered in a choice of four wheelbases. Two months later, the 190-hp version of the Ford diesel will be added.

Next spring, the plant will begin assembly of the CF-7000 line with 6.6-liter engines in 170- and 185-hp versions. All Ford diesel engines for Cargo will have air-to-air aftercooling. Air brakes will be standard on all models.

The 1991 L-7000/8000 heavy trucks will feature new hydraulically damped cab mounts to improve their ride. New brake and steering-gear features are designed to improve handling and performance on selected models.

S-Cam brakes will replace wedge brakes as standard equipment on L/LN models with 16,000- to 20,000-pound front axles. They will also be equipped with dual Ross TA65 power steering gears for improved performance.

New to the Ford lineup, the Ross power steering gear will also be standard equipment on all L-series models with conventional 7,000- to 12,000-pound front axles.

Other 1991 changes include an optional aerodynamic hood on LS/LTS models, flush-mounted door handles moved down for easier access, a new 210-inch-wheelbase model to take advantage of federal weight and loading requirements and, later in the model year, an improved climate control system and improved diesel engines.

The new heating/air conditioning system is designed to eliminate condensate leakage, improve air distribution through new ducting and provide improved performance and serviceability.

Ford is also updating its AeroForce line of tractors and WorkForce Class 8s.

Ford says diesel upgrade will boost fuel efficiency

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. is upgrading its diesel family of medium- and heavy-truck engines and powertrains for other medium-duty models to meet 1991 emission standards.

Ford diesel engines will have upgraded fuel injection, governing systems and air-to-air aftercooling across the board.

The changes improve fuel efficiency and do not require the use of electronics or expensive exhaust aftertreatment systems, said John H. Merrifield, Ford heavy-truck sales manager.

The 1991 Ford diesel engine lineup will include 6.6-liter, 170- and 185-horsepower engines and 7.8-liter, 190-, 215-, 225-, 240- and 270-hp engines, all certified for 50 states and Canada.

Ford diesel engines are standard on the Cargo medium-duty low tilt trucks, on L-series single and tandem rear axle and set-back front axle models, and on B-Series buses. They are optional on the medium-duty F-series.

The 270-hp version of the 7.8-liter generates 735 pounds-feet of torque. It is optional on all Ford L-8000 models. That torque rating is the highest of any mid-range diesel and compares favorably with the torque of premium diesels, Merrifield said.

The Ford 270 diesel is an air-to-air aftercooled engine for hub and spoke regional tractor and truck applications.

The 215-hp diesel generates the same torque as the 270-hp, but at lower rpm. A less expensive alternative to low-power premium diesels, it is geared to intracity service where high torque, rather than high horsepower, is required.

Ford diesels feature a specially calibrated Garrett turbocharger to boost the volume of air to the cylinders, direct fuel injection and free-breathing "cross-flow" intake and exhaust ports.

Ford is also adding multi-port electronic fuel injection to its 7.0-liter gasoline engine. Its horsepower is projected to be 235 at 3,600 rpm, compared with a 193-hp rating for the carbureted version.

Ford's medium-duty F-series will have a standard front-tilt hood in 1991. An "alligator" type hood can be specified at a lower price.

To meet driver demand, a Ford-designed exhaust brake will be available on the 1991 F-series models with manual transmissions and air brakes. The new exhaust brake will function when an instrument-panel switch is turned on and the throttle is in idle position with the clutch engaged.

4 European lines post April gains

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — The European import community continued to field some sales winners in April, although import-car sales for the month slipped to 205,671, down 15.2 percent from last year.

Audi of America Inc., Jaguar Cars Inc., Mercedes-Benz of North America Inc. and Porsche Cars North America Inc. posted sales increases. All of them lost sales in 1989 but so far this year are ahead of their year-ago pace.

Still, European imports as a whole were down about 12.2 percent for the month, to 40,538.

Japanese imports declined about 13.4 percent to 146,321, but Japanese makers' U.S. transplants are taking up the slack.

GM's imported Geo car models proved an exception. They gained 4.8 percent for the month and jumped nearly 50 percent for four months to 53,970.

Korean imports were down 31.2 percent to 18,812.

The Europeans' strongest performers tended to be newer, cheaper models or models that were the subject of price cuts or other special incentives.

Jaguar, which posted record first-quarter sales, continued to climb in April with a monthly gain of about 19 percent to 1,599 cars. Through April, Jaguar sales were up about 8.9 percent to 6,343. Jaguar introduced a less expensive version of its XJ6 sedan last fall.

Mercedes-Benz didn't cut prices, but said last fall it held price hikes to a minimum while increasing content. The Mercedes 300 class posted the most significant gain, up about 30 percent for the month. Mercedes April sales were 6,674, up 12.5 percent. For four months, they were up 4.1 percent to 24,030.

The Audi 80 scored the biggest percentage gain for Audi in April, increasing 81.7 percent. Audi was up 42.6 percent for the month and was up 13.6 percent for four months.

Porsche sales rose 28.3 percent in April and 29.9 percent for four months.

BMW's entry-level 3 series gained about 12.5 percent to 3,242 cars in April, helping BMW sell 5,848 cars, just about equal to April 1989. BMW adopted low-interest financing on some 3-series models in March. Year-to-date, however, BMW sales were down about 13 percent to 20,336.

Sales for Saab-Scania of America Inc. fell about 19 percent for the month to 2,182; year-to-date sales were down 19.7 percent to 8,518.

CRACKDOWN

GM to repair engine support cracks in Phoenix police department cars

PHOENIX — General Motors is repairing the Phoenix Police Department's Chevrolet Celebrities that have cracks in the engine supports.

The cracks were discovered last month on 67 of 88 1985- and 1986-model Celebrities, said Juan Martin, Phoenix deputy public works director.

Most of the cars had been driven 40,000 to 70,000 miles, said Mike Lopker, equipment management administrator for the public works department.

The city estimated repair costs at $600 to $700 per car.

GM has shipped the department subframes for 20 of the cars, reimbursed the city for the installation and hired a car dealer to weld the other 47 cracked frames.

GM also paid for the installation of reinforcement gussets for other Celebrities in the fleet in which cracks have not developed.

AROUND THE WORLD

VW big winner in Mexico car market; Ford's share dives

By Stephen Downer
STAFF CORRESPONDENT

MEXICO CITY — A surge in Beetle sales helped Volkswagen de Mexico S.A. de C.V. catapult to a 39.3 percent share of the Mexican car market in the first quarter.

VW's 12.8 percentage point increase in market share was the quarter's most explosive in a strong Mexican industry. At the other extreme, labor-hampered Ford saw its share sliced in half.

VW Executive Commercial Director Dietrich Aufenacker said VW's wholesale passenger-car sales from January through March were 28,084 units, almost 10,000 more then those of second-placed Nissan Mexicana S.A. de C.V.

Nearly half of VW's sales (15,453) were Beetles.

In all, the five car assemblers in Mexico wholesaled 71,393 passenger vehicles, 11.2 percent more than in the same period last year.

Nissan's sales rose, but its share fell 0.4 points to 25.6 percent.

Third-place Chrysler Mexico S.A. saw its share slip more than 4 points to 20.3 percent. A 28.7 percent sales increase pushed General Motors de Mexico S.A. de C.V.'s share from 7.4 to 8.5 percent.

Ford's plunge dropped the company to a 6.3 percent car share, down from 15.4 percent in the year-ago quarter. Sales fell by more than half as the company was pinched by labor unrest at its Cuatitlan plant, where production has been curtailed most of the year.

VW has been producing at full strength and still could use more capacity. "We are completely sold out on the domestic market," Aufenacker told *Automotive News*.

He said the waiting list for a Beetle is four or five months and about two months for Golf and Jetta. He said VW could sell 30 percent more Beetles it if had sufficient capacity.

The company's assembly plant in Puebla, which produced 60,000 vehicles in 1988 and twice that number last year, is expected to assemble 220,000 vehicles this year.

MEXICAN CAR SALES

	1st quarter 1990	1st quarter 1989
Volkswagen	28,084	17,007
Nissan	18,300	16,685
Chrysler	14,413	15,886
General Motors	6,095	4,734
Ford	4,501	9,886
Total	71,393	64,198

About 94,000 will be Beetles. The rest will be Golfs, Jettas and Type 2 vans and minibuses. The Beetle line is working three shifts, and a third shift will be added shortly for Golf and Jetta production, Aufenacker said.

He said about 60,000 Golfs and Jettas will be exported this year, all to Canada and the United States. Canada only receives the Golf; the United States imports both.

Aufenacker said two shipments each month of between 3,600 and 4,000 vehicles each are sent to the United States and Canada.

Asked about possible exports of the Beetle, which is produced only in Mexico, Aufenacker said: "We don't have enough capacity to export the Beetle. Of course, there are markets that are interested."

Aufenacker said last year VW began shipping Golfs and Jettas to Paraguay and Chile.

Ford asks Mexico for early imports to ease shortage

By Stephen Downer
STAFF CORRESPONDENT

Ford Motor Co. S.A. de C.V. is awaiting Mexico's approval to import thousands of vehicles from the United States to offset a production shortage in that country.

The move would bring an early end to the Mexican government's decree issued last December that kept a ban on all new vehicle imports until the start of the 1991 model year.

Ford has suffered a steep drop in sales and market share because of production stoppages at its plant in Cuautitlan.

An internal labor squabble that began with a Jan. 8 fatal shooting has evolved into a dispute over rehiring. By the end of April, daily production was still about 100 units short of the normal 450 vehicles per day, spokesman Carlos Bandala said.

Mexican industry sources said Ford wants to initially import 4,000 to 5,000 vehicles. They would include Tempo, Taurus and Thunderbird/Cougar models.

Cuautitlan production includes the Taurus, Thunderbird, Tempo and pickup trucks.

Bandala did not deny the reports that the company approached the government, but said the Mexican Automotive Industry Association has approached the government on behalf of Mexico's five automakers, not just Ford.

But executives at two other companies said Ford has pursued the issue on its own.

Cesar Flores, the association's president, declined comment. Trade and industrial development ministry officials could not be reached.

According to one competitor, Mexico's four other automakers wouldn't want to see the import ban lifted prematurely. "We have invested in our domestic production, and a weak Ford suits everyone, especially Chrysler and GM," he said.

Nissan and Volkswagen also produce in Mexico.

The Cuautitlan dispute caused Ford car sales to fall to 4,501 units in the first quarter, down from 9,886 a year earlier.

Many workers at the plant are reported to have voted in favor of abandoning the powerful Federation of Mexican Workers and joining an independent trade union movement.

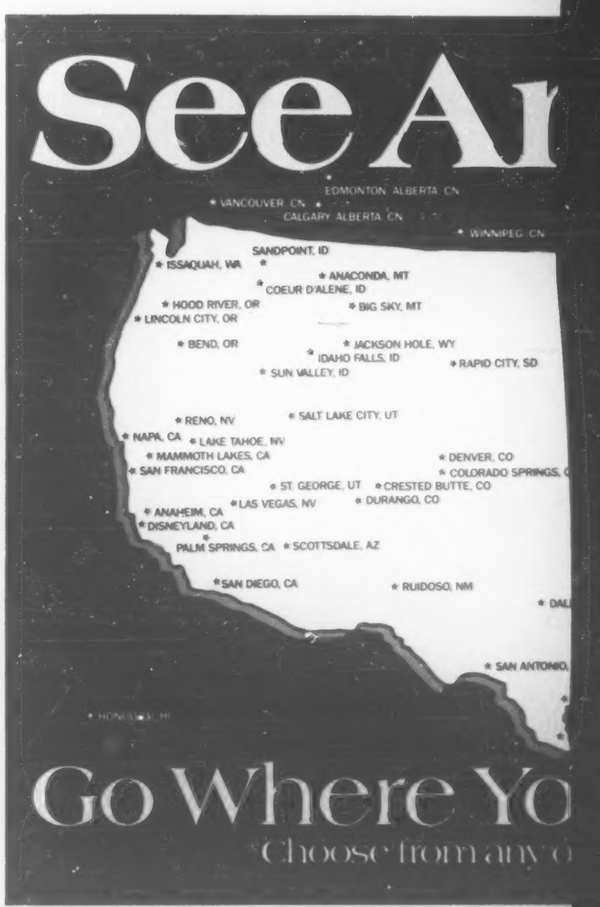
A Promotion That Works!

We took the bugs out of vacation certificates. Our sales aids (promotions) are unique in the industry. It's a fact . . . "Everybody wants to get away for a couple of days." We offer your customers a choice of over 80 destinations to escape to throughout the United States and Canada, including cruises.

Our Program is unique because:

- Your customer has a choise of over 80 destinations including a cruise (no mileage restrictions)
- Guaranteed arrival dates (no turn downs)
- No minimum orders (customized for your needs)
- No surcharges, gimmicks, or real estate deals
- Your customer is not required to pay a processing fee or deposit
- Extensive P.O.P. materials provided at no charge



What would you rather offer your customer?

- Free floor mats?
- A $60 discount on a $10,000+ vehicle?
- 3 days and 2 nights family getaway to the destination of their choice?

The answer that has the highest value also has the lowest cost.

TRUCKS

FROM PAGE 3

cars only have to comply for five years or 50,000 miles.

The House and Senate bills propose not only to tighten the tailpipe standards for light trucks but differentiate between truck sizes.

Both bills set new categories for these vehicles. Those weighing less than 3,750 pounds — bare minivans and the so-called "beach boy" pickups often decked with chrome wheels and customized paint jobs — would have to comply with passenger car standards. Detroit isn't protesting that issue too vocally.

But vehicles weighing betweeen 3,750 and 5,750 pounds — including nearly all minivans, pickups and sport utilities — face standards that virtually double today's requirements. What's more, under the Senate bill the tougher standards would still have be met for 10 years or 120,000 miles.

The House bill is less stringent. Because of a deal struck by Rep. John Dingell, D-Mich., and Henry Waxman, D-Calif., the standard is lowered after 50,000 miles and the government wouldn't run compliance tests on them after 75,000 miles.

Why the difference in the Senate?

The original draft of the Senate bill lumped all trucks with passenger cars and set the same emissions standards for all vehicles. The House adopted California standards for light trucks, which the industry has said it can meet.

Negotiators in the Senate ultimately loosened standards for automobiles, lowering levels after 50,000 miles for passenger cars and the lightest of trucks — base pickups, small sport-utilities and stripped minivans.

But similar adjustments were not made for trucks weighing between 3,750 and 5,750 pounds.

"They simply ran out of time and told us we'd have to get it fixed in conference," Brown said.

Lobbyists and engineers were astounded. The industry had anticipated new truck emissions requirements — but nothing like the Senate proposed.

The EPA notified manufacturers 18 months ago that it would seek to tighten standards but backed off when Congress took up the clean air bill last fall. "We never anticipated anyone would do anything as illogical as what happened in the Senate," Brown said. "We have a confusing mess."

Manufacturers estimate the cost of making trucks comply with new pollution standards will run between $300 to $500 per vehicle — similar to the cost of bringing a passenger car into compliance. But the engineering task will be more difficult.

"It is tougher to do a truck because of the different transmission gears, rear axle gears and larger engine have to do more work than a car," Brown said.

PROPOSED LIGHT TRUCK EMISSION STANDARDS

(Exhaust allowances in grams per mile)

	Current	Senate	House
Trucks less than 3,750 pounds			
Hydrocarbons	0.80	0.25	0.25
Carbon monoxide	10.00	3.40	3.40
Nitrogen oxides	1.20	0.40	0.40
Compliance	10 yr/120,000 mi	10 yr/100,000 mi	10 yr/100,000 mi
Trucks 3,750 to 5,750 pounds*

PALLADIUM

FROM PAGE 1

dium-rhodium or even palladium-only catalysts could be short-term if higher automotive requirements for the material prompt speculators and precious metals traders to quickly drive up palladium's price.

"There might be some short-term cost savings if you could absorb the risks," says Kenneth R. Deming, a senior staff engineer for exhaust systems at the AC Rochester Division of General Motors. "But it certainly doesn't make sense to save $30 (per vehicle) in the short run and then have a $300 recall campaign."

Platinum currently trades at approximately $490 per troy ounce. Palladium trades at $119 per troy ounce. And rhodium trades at about $2,200 per troy ounce. A typical three-way catalyst uses about one-tenth to one-twentieth of a troy ounce of precious metal.

Catalyst and carmaking experts say conventional catalysts with all three platinum-group materials have $50 to $100 worth of precious-metal coating on the substrate. But depending on the specific vehicle, the ratio of those metals varies widely.

"Swings in catalyst technology drive the prices of those metals wild," says a GM source. "Early last November, rhodium was in the $1,250 range. And now it's in the $2,150 range."

But balancing the enthusiasm of both catalyst producers and carmakers are reports from catalyst scrappers of a seemingly high palladium-catalyst failure rate — at least for some of the early units.

"We've advised our suppliers that we don't want the palladium catalysts," says Raymond Sloan, president of Catalytic Converter Refining Co.

"We reject them. Given the $120 an ounce market price of palladium, we can't justify our processing costs. And there's very little rhodium in them. And they must definitely be having a problem with them. The palladium catalysts won't make it."

The new catalysts could cost significantly less, reach operating temperature more quickly and offer greater durability than the older-style catalysts, say engineers.

"We're already producing a number of light trucks that use the palladium catalysts," says Michael Brady, supervisor of catalyst development at Chrysler Corp. "We're using them in two four-cylinder engine families."

The Motor Vehicle Manufacturers Association specifications reveal that the company's 49-state minivans with the 2.5-liter, four-cylinder engine use a single catalyst with two ceramic bricks. One brick is coated with platinum and rhodium. The other is coated with palladium and rhodium.

The 1990 Ford Thunderbird/Mercury Cougar with the 3.8-liter V-6 use a catalyst with palladium and rhodium. Supercharged versions of the car are equipped with a more conventional catalyst loaded with platinum, palladium and rhodium.

According to buyers of scrap catalytic converters, Ford also has installed the platinum-free catalysts on its F-150 pickup trucks.

Carmakers in the Far East may have a technological and marketing jump on domestic makers. According to a source at one catalyst company, 25 percent of the cars in Japan that use three-way catalysts use substrates coated with palladium and rhodium.

But carmaker and catalyst company researchers warn that — at least initially — the platinum-free thermal reactors might not be as catalytically efficient. They are also more sensitive to poisoning by lead and sulfur. Japan's gasoline supply is low in sulfur and lead.

And carmakers faced with tightening emissions standards and longer compliance periods are naturally hesitant to use less-efficient and less-robust emissions technology. The current compliance period for a new automobile is five years/50,000 miles. An extension to 100,000 miles has been proposed.

"There's plenty of technology to make 0.25 hydrocarbon and 0.4 NOx," said Deming. "But some of the proposed standards, like 0.125 hydrocarbon and 0.20 NOx are just not achievable."

The current federal exhaust emissions standards are 0.41 grams per mile for hydrocarbons, 3.4 gpm for carbon monoxide and 1.0 gpm for nitrogen oxides.

Ford has a fleet of 40,000 to 50,000 new Thunderbirds and Cougars in customers' hands with the new catalysts, but last week Ford refused to comment on the palladium-rhodium catalysts.

Weaknesses of the palladium catalyst are its slightly lower catalytic or conversion efficiency, lead and sulfur poisoning from gasoline, and high temperatures from ignition-system failures.

But researchers say that with lead legislated out of gasoline (current lead levels are below 1 milligram per gallon), with gasoline sulfur content reduced with new more-accurate fuel injection systems and with robust electronically controlled ignition systems, the serious threats to catalyst life are well under control.

In addition, refiners and carmakers are looking at reformulated gasolines with less complex hydrocarbons that may be easier for palladium catalysts and fast-burn combustion chambers to digest.

But platinum will remain an important catalyst material because of its relative insensitivity to poisoning from lead or sulfur and its greater catalytic action.

SATELLITE

FROM PAGE 1

tions system as it prepares for the 21st century.

"Everybody has different pieces of equipment now," said Dave Parker, of Parker Cadillac Inc. in Little Rock, Ark. "Now, everybody will be on a common system."

Parker, who served on the dealer advisory council to design the network, said the new system will speed the transfer of information. For instance, now, if he asks electronically about one of his car orders, he has to wait overnight for an answer. The new system will provide an immediate response.

Except for new services offered on the satellite network, Parker added, a dealer's cost should be the same and maybe slightly less for the next 10 years.

Dealers will be linked to GM's vehicle divisions, including the new Saturn Corp., as well as GM's parts and service operations, General Motors Acceptance Corp. and Motors Insurance Corp., GMAC's insurance subsidiary.

GM will begin a pre-pilot test of the satellite system this summer at selected zone offices, its seven truck centers and some dealerships, including those owned by eight dealers who helped design the network.

Next, GM will pilot-test the system with 200 dealers. They will be a mixture of small and large multi-franchise dealers. The pilot will be completed by the end of 1990.

Then, GM plans to install 400 satellite dishes a month and complete installations by the end of 1992.

In addition to having dealers help design the network, GM received advice from the marketers of dealer computer equipment, including Reynolds and Reynolds Co. and Automatic Data Process, to make sure the satellite network will be compatible with every computer system in a dealership.

GM will be responsible for the satellite system but will contract with its computer services subsidiary, Electronic Data Systems Corp., for the development, implementation and technical operation of the system. Hughes Network Systems, a unit of GM's defense and electronics subsidiary, GM Hughes Electronics, will provide the satellite technology.

Chrysler Corp. established a similar satellite communications system in 1988. Brodie said Chrysler's system, now the world's largest private satellite network with all of Chrysler's approximately 5,300 dealers participating, is half the size of the new GM setup and has different computing capabilities.

Hughes provided the satellite hardware for the Chrysler network.

Satellite highlights

- GM will pay for installation of satellite dishes and hopes to have all its dealers hooked up by 1992
- GM's current land-based communications system has 200 applications. Another 63 applications have been proposed for Pulsat
- Pulsat will include video as well as two-way data transmission

Catalyst maker picks S. Africa

By Des Kilalea
SPECIAL CORRESPONDENT

JOHANNESBURG, South Africa — Johnson Matthey plc, the world's largest manufacturer of automotive catalysts, is establishing a catalyst plant in South Africa — the source country for the bulk of the precious metals used in the emissions control units.

The 35 million rand ($13.5 million) plant is to be erected at Johnson Matthey's existing precious metals plant at Wadeville, near Johannesburg. Production is scheduled to start in July 1991. The plant will have a capacity of 2 million units a year.

Christopher Clarke, Johnson Matthey executive director, says the decision to build a plant in South Africa was prompted by pressure from Johnson Matthey customers in Europe. They want to ease the impact of South Africa's local content rules.

South Africa's Phase Six local content rules allow automakers to receive import credits if they export components.

By exporting catalysts from South Africa to their European plants, such automakers as BMW, Mercedes-Benz and Volkswagen will be able to use a higher percentage of imported components in South African-made vehicles.

South Africa itself does not require cars to be fitted with catalysts and lead-free gasoline is not available. Catalysts made in South Africa by Johnson Matthey will be exported to Europe.

Johnson Matthey recently opened a catalyst plant in Brussels, Belgium, capable of producing 5 million units annually. It supplies the growing European market for catalytic converters.

pany had waited until dealers were gasping for sales before acting.

"This is three months late, but thank God they've done something," said the dealer, who spoke on the condition he not be named.

"This is the first time I have ever seen them walk away from dealers on an issue as important as this. They've let dealers swing in the wind without rebates. Minivans are where most of us make our money.

"They held back on rebates to please Wall Street, but they forgot market share. It kills me off, but it allows them to please Wall Street," the dealer said.

The rebate comes at a time when the minivan war is in full swing.

General Motors is offering consumer incentives of $1,000 on Pontiac Trans Sport and $900 on Chevrolet Lumina APV and dealer incentives of $750 to $1,250 on Oldsmobile Silhouette. The Silhouette rebate is based on performance against sales quotas.

Ford Motor Co. is paying a $700 rebate to Aerostar buyers.

Toyota Motor Sales U.S.A. recently jumped into the minivan fray with its 1991 Previa. But Toyota has yet to place an incentive on the new minivan.

This is only the second time Chrysler has offered rebates on its minivans since they were introduced in 1984. Dealers have clamored for minivan rebates since the success of the program early this year.

That program, which ended Jan. 31, offered retail rebates of $1,000 on Plymouth Voyager and Grand Voyager, Dodge Caravan and Grand Caravan and Chrysler Town & Country.

Since then, dealers have urged Chrysler to reinstate the program in an effort to stimulate sales. But Chrysler has sought to market minivans without incentives because rebates cut per-vehicle earnings on one of the company's most profitable vehicles.

The new round of incentives applies only to long-wheelbase models.

The first minivan incentive was part of the company's guaranteed rebate program, which assures buyers that if the rebates increase before Sept. 30, they will be paid the difference by Chrysler.

Because dealers often pass their rebates on to their customers in the form of price cuts, this new incentive program lets the manufacturer give the consumer a break while artfully bypassing the guaranteed rebate. Chrysler had said it did not expect to repeat the retail incentive on minivans this model year.

Still, many dealers are pleased about the program and believe it will help sell more minivans.

Tim Ryan, general manager at Warnock Dodge in East Hanover, N.J., said his dealership ordered 25 Grand Voyagers and 25 Grand Caravans the day the dealer incentive was announced. The incentive money will be used for advertising, marketing and other expenses, he said.

"It's not like we'll pocket the money," Ryan said. "The competition is still out there."

Said a metropolitan Detroit dealer: "It's a good deal for the consumer, and it's good for us, too. We can use the money as an incentive or how else we see fit."

In the first seven months of the 1990 model year (Oct. 1, 1989, to April 30, 1990), Chrysler's retail sales of minivans totaled 232,870, which was 21.76 percent of the company's total retail sales of cars and trucks. The minivan sales included 96,234 long-wheelbase models.

In other incentive news, Toyota is offering factory-to-dealer rebates on some 1989 and 1990 cars and trucks.

The program, called "Extra Innings '90," is based on performance against quota. Rebates on 1989 and 1990 cars are: Tercel, $200 to $1,000; Corolla, $200 to $1,000; and Camry, $400 to $1,200. The 1989 and 1990 trucks rebates are: 4x4, $200 to $500; 4x2 pickup, $700 to $1,000; and 4x2 base model, $900 to $1,200.

Toyota's program expires June 4.

VIPER

FROM PAGE 2

ident; Francois Castaing, vice president of vehicle engineering; Thomas Gale, vice president of product design; and Carroll Shelby, a consultant and father of the Shelby Cobras of the 1960s.

When the Viper debuted, Lutz eloquently explained its mission.

"Getting back to what a sports car is, which is the connection of man and machine with a minimum of complications, is the approach of it," Lutz said then. "It's the fundamentalist approach to sports cars. Just get back to raw power."

"Sports cars have gotten way too East Coast, effete, effeminate, sophisticated. Lots of whizzy little parts in there and too much electronics and too much sophistication," Lutz said then. "They are walking away from the essence of what a true sports car is, which is an exciting, gut-wrenching basic automobile with no frills that is just defined around an engine, a transmission and a chassis."

The company declined comment on whether the Viper will be equipped with an air bag, anti-lock brakes or air conditioning.

Chrysler said because of its limited volume, the Viper will not affect the company's corporate average fuel economy rating.

The Viper team of 50 people, including suppliers, operated as though it were a separate, independent company.

"Chrysler will develop more all-new vehicles in the next five years than at any previous time," Iacocca said.

"Some people may ask if we can afford to put one more new model on our plate. My response is, with a program that implements a new, more responsive product development process, that dramatically cuts leadtime and investment, and develops an approach that can be applied to other product programs, how can we afford not to?"

PRODUCTION

Car output holds steady at 138,967

By Karen Detkowski
AUTOMOTIVE NEWS STATISTICIAN

U.S. makers scheduled 138,967 cars last week, 1.30 percent below the prior week and 12.86 percent below the year-ago week.

The year's car assembly total is 2,349,157, down 22.20 percent from the year-ago tally.

Last week's estimated production was divided as follows: General Motors, 45.13 percent; Ford Motor Co., 22.96 percent; Chrysler Corp., 13.60 percent; Honda of America Manufacturing Inc., 6.47 percent; Toyota Motor Manufacturing U.S.A. Inc., 3.19 percent; New United Motor Manufacturing Inc., 3.02 percent; Diamond Star Motors Corp., 2.14 percent; Mazda Motor Manufacturing (USA) Corp., 2.03 percent; Nissan Motor Manufacturing Corp. U.S.A., 1.13 percent; and Subaru-Isuzu Automotive Inc., 0.33 percent.

Truck production was scheduled at 97,275 units last week, 3.82 percent above the previous week and 8.11 percent above last year.

Year-to-date, truck assembly is 13.43 percent below last year with 1,555,316 units.

GM will idle the Lakewood, Ga. assembly plant indefinitely Aug. 6. No future products are planned for the plant at this time.

GM scheduled overtime last Friday at the Janesville, Wis., plant and Saturday overtime at Lordstown, Ohio; Orion, Mich.; and the Lansing, Mich., B-line.

Truck plants scheduled for Saturday overtime at GM were Moraine, Ohio; Flint, Mich.; and Baltimore.

Ford idled the Chicago Taurus/Sable plant last week because of a shortage of dealer orders. The plants builds about 5,000 cars a week.

Ford's Wayne, Mich., and Wixom, Mich., car plants worked daily overtime last week. Wixom also slated Saturday overtime.

Ford reported daily and Saturday overtime for the following truck plants: Twin Cities, Minn., Kansas City, Mo., Louisville, Ky., and St. Louis.

Ford's Norfolk, Va., and Lorain, Ohio, truck facilities worked daily overtime last week.

Chrysler's Belvidere, Ill., and Newark, Del., car plants reported Saturday overtime last week. The Dodge City truck plant in Warren, Mich., also worked Saturday.

Canada cars top 1989 pace

Canadian automakers targeted production of 22,365 units last week, 17.10 percent below the prior week but 24.24 percent above the year-ago week.

For the first time, year-to-date production rose above the 1989 total: 401,500 cars have been assembled, up 1.21 percent over last year.

Scheduled truck output of 17,877 last week fell 14.35 percent below the prior week but rose 7.62 above the year-ago week.

So far this year, 359,828 trucks have been built, 10.71 percent below the 1989 total at this time.

65th year—$65.00 per year, $2.00 per copy

Thomas Moore of Arlington, Va., discovered that the extended vehicle service contract he bought along with his new car in 1986 was virtually worthless after the contract administrator withdrew from the business.

Service contracts under siege

Underfunded administrators fold; insurers quit business

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

CONTRACT Casualties

From his stately colonial office plaza in Geneva, Ill., Jim Williams sells car phones, fax machines, computers and beepers. He is also president of First National Warranty Corp., an administrator for vehicle service contracts.

It's a lofty title, but empty. First National discontinued operations Jan. 10 after Williams was unable to find an insurance company willing to underwrite his extended-service contracts.

"We are not accepting any new business," he says. "We turned over administration of existing contracts to the insurance companies."

Williams isn't alone. The extended-service-contract industry is under siege. In a multibillion-dollar industry, millions of customers bought contracts through companies that eventually gave up selling them.

More than 15 companies — known as administrators — have disappeared from the landscape in the last three years. When that happens, either insurers, car dealers or car buyers get stung.

Some administrators have filed bankruptcy, turning over their existing service contracts to insurers to manage. Others have withdrawn to sell other kinds of automotive products.

And more administrators are expected to follow.

Insurance companies typically guarantee the contracts. Now, saddled with hundreds of millions of dollars in losses on extended-service contracts, insurers are hastily exiting the business.

State officials in California, Florida and New York are stepping up efforts to police the industry.

And automakers are cutting ever deeper into private administrators' market share with

Ford again shuns carryover rebate; will offer incentives

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

As a buffer to what looks like a tough buildout period, Ford Motor Co. will offer incentives of up to $1,500 on 1990 models after its 1991 models go on sale this fall. The incentives will be in lieu of a carryover allowance and will run until Dec. 31.

In May 10 letters to Ford and Lincoln-Mercury dealers, Ford said the company will offer $400 to $1,000 on 1990 Ford Division cars and trucks and $500 to $1,500 on Lincoln and Mercury cars sold after the 1991 models are introduced until Dec. 31.

Ford's launch date for 1991 models is tenatively scheduled for Sept. 28.

The letter to Ford Division dealers said the company's 1990 car production plans for the remainder of the model year, excluding 1991 Crown Victoria and 1991 Escort, will be 37 percent below the same period in 1989. Truck production for the remainder of the model year, excluding the 1991 Explorer, will be down 19 percent from the year-ago period.

The post-introduction incentives, which Ford said will likely be in the form of dealer cash, will be given in lieu of a carryover allowance. Ford offered consumer rebates but no carryover allowance in the 1989 cleanup period.

That makes Ford the second automaker to plan the 1990 model cleanup without using the traditional carryover allowance. Earlier this year, General Motors told its dealers it would pay them 5 percent of the sticker price of 1990 models at the time each vehicle is sold. The GM plan also will run from 1991 introduction until Dec 31, 1990.

The actual Ford plan for cleanup incentives will depend on competitive year-end cleanup programs, Ford Division General Sales Manager Philip Novell said in the letter to Ford dealers.

But dealers may have to choose

United Airlines unions woo Greenwald to head carrier

By Mark Hornung
CRAIN NEWS SERVICE

United Airlines' three unions are courting Gerald Greenwald, vice chairman of Chrysler Corp., to run the carrier if its employee buyout is successful.

Greenwald has emerged as a leading labor candidate for the top job at United, according to a story in the May 28 issue of *Crain's Chicago Business*, a sister publication to *Automotive News*.

Greenwald was out of the country last Friday and could not be reached for comment, but a Chrysler spokesman said, "There's absolutely nothing to it."

Greenwald

One source close to Greenwald termed the likelihood of the Chrysler executive accepting the United job as "a long shot."

The source added, however, that Greenwald has doubts that Chrysler Chairman Lee Iacocca will make good on an earlier public pledge to step aside by 1991.

If the unions succeed in wooing Greenwald to succeed current Chairman and CEO Stephen M. Wolf, it would be a huge breakthrough in their efforts to acquire United's parent, UAL Corp.

Well-placed sources described negotiations as "progressing well, but not yet done." Sources added that if a deal with Greenwald is

Japanese buy second California dealership, seek more

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Champion Nissan, a Northern Califonia dealership, was scooped up by one of Japan's largest trading companies last month for more than $4 million.

The Pittsburg dealership is the second California automotive dealership bought by Nissho Iwai Corp. of Osaka, Japan.

Two years ago, Nissho Iwai purchased Weatherford BMW, which has since moved from Emeryville, Calif., to Berkeley, Calif.

"We are planning to add more dealers, and I like relatively large operations," says Hideaki Yasukochi, a former Nissho Iwai manager and the current president of Weatherford Motor Inc., the nation's sixth largest BMW dealer.

He says Nissho Iwai is close to signing another agreement, this one in Southern California, and is considering "the top 10 dealers in every franchise in terms of profit" for possible acquisition.

Nissho Iwai is the sixth largest of Japan's general trading companies with annual sales in 1989 of $73 billion. It has 7,000 employees in 182 offices around the world.

Yasukochi came from Japan to California to search out auto-related investments for Nissho Iwai. Although he retains no official title at Nissho Iwai, he is its point man for U.S. dealer acquisitions.

As the industry plods through what seems likely to be another tough year for retail sales, many dealers are interested in selling, according to John Campbell, president of Campbell Automotive Group, a network of 12 franchises in Southern California's Orange and Riverside counties.

"Business is soft and lots of dealers want to sell, but if you do a return-on-investment analysis, a lot of buyers won't bite.

"But the Japanese have a long-term perspective, and you can make a lot of deals possible if you're basing it on a possible 50-year return," Campbell says.

Americans find Japanese management style puzzling, according to a survey of 4,500 people who work for Japanese companies in the United States. Page 6.

Grim reaper Ford stalks AC Cars, Ace project

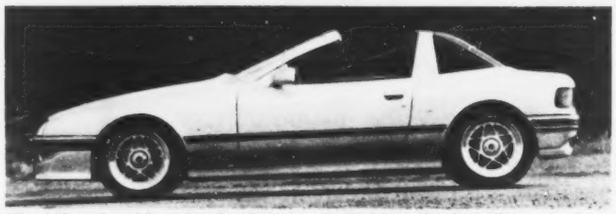
By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Ford Motor Co. has applied to the British courts for permission to liquidate AC Cars Ltd., the British sports car company it has controlled since 1987.

Ford's decision to dissolve AC, which has not produced a car in years, means that the enthusiastically awaited AC Ace sports car project has apparently bitten the dust after several years in limbo.

But AC minority shareholder Brian Angliss has served notice that he will oppose Ford's petition to liquidate the company.

Presumably, he will seek to continue the project.



The 140-mph, mid-engine Ace has apparently bitten the dust after years in limbo. It may be the second British sports car Ford has canceled in 1990.

The 140-mph, mid-engine Ace may be the second British sports car effort Ford has canceled this year. It also has dropped the Jaguar F-type. Ford acquired Jaguar plc last fall.

The targa-top Ace appeared as a prototype at the Birmingham, England, auto show in October 1986. Based on Ford mechanicals, the four-wheel-drive two-seater was designed and developed by AC Cars and Angliss' Autokraft firm, an authorized replicator of the Cobra, in Brooklands, England. Ford of Europe design group employees were consultants on the project.

In October, 1987, Ford acquired 50.96 percent of AC for £1.3 million ($2.2 million) from AC Holdings Co. with the intention of putting the Ace into production. The rest of AC is owned by Angliss.

Angliss and Ford sought to revive the marque, which has a history, albeit checkered, dating back to the turn of the century. In late 1987, plans were announced for a new £5 million ($8.4 million), 90,000-square-foot development and manufacturing center for AC Cars at Byfleet, Surrey.

That factory, in the Brooklands Industrial Estate, has since been completed and is turning out Autokraft products.

Ace production was expected to be fewer than 500 units annually. When the car debuted, it was slated to be on sale in North America by the end of 1987. But the show car was overhauled after Ford took control, and the project suffered a series of setbacks as the partners quarreled.

"There were a number of revisions and a fair amount of rede-

There were 8 selling days in the period this year and 9 last year.

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Sales of domestically produced new vehicles continued to plunge in mid-May. Sales of cars and trucks totaled 258,319 units, compared with 352,203 a year ago.

There were eight selling days this period and nine last year. The daily selling rate was 32,290 units, compared with 39,134 in 1989. The dip in the daily selling rate was 17.49 percent. The actual total declined 26.66 percent this year.

Car sales were down 27.95 percent, while truck sales dropped 24.45percent.

All Japanese transplant automakers experienced sales growth, but the Big 3 faltered. General Motors' vehicle sales were down 30.15 percent; Chrysler Corp. was off 30.29 percent; and Ford Motor Co. slipped 30.89 percent. Only six car nameplates produced by the Big 3 had sales increases; four of those were luxury models.

For the second straight 10-day period, every Ford and Mercury nameplate nosedived. Ford Taurus sales fell 52.08 percent, while Mustang dropped 49.28 percent. Sales of the new-for-1990 Lincoln Town Car were up 33.13 percent.

Ford sold 34,864 trucks, compared with 44,583 last year.

Chevrolet, which had been experiencing modest growth due to its Geo Prizm, saw total car sales shrink 24.92 percent. Dealers sold 435 fewer Prizms this year.

Sales of Chevrolet's redesigned Caprice were just about even with 1989. Corvette was the only Chevy to post a gain; its increase was 10 units.

Sales were down at each GM car division, though sales of the Cadillac Seville, Oldsmobile Toronado and Pontiac Grand Prix were up.

With the exception of Plymouth Laser, every Chrysler nameplate suffered a drop in sales. Laser sales rose to 1,148 from 748 last year.

Chrysler's car sales edged truck sales by 278 units (21,325 vs. 21,047). Truck sales slipped 29.82 percent from year-ago figures.

Honda led the transplants' car sales assault, followed by Toyota. Honda sold 11,076 North American-built Civic and Accord models, an 8.82 percent increase over 1989. Toyota continued to pick up speed with its Corolla and Camry, racking up 8,820 sales, a 92.91 percent jump.

Mazda's sales were up 29.14 percent; Nissan's car sales jumped 43.35 percent. Nissan was the only domestic truckmaker to report an increase. Sales rose 15.74 percent.

REGAL SEDAN: *Buick pitches with patriotism for introduction of '91 model*

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Inside a huge airplane, workers, clad in overalls, remove the cover from an automobile, revealing a 1991 Buick Regal sedan.

The car is driven off the plane and met by a crowd of Japanese executives and engineers, who look bewildered and awed as they examine it from top to bottom.

The voice-over entones: "Introducing an American automobile that will compete with any car in its class, anywhere."

So begins Buick's television ad campaign introducing the 1991 Regal four-door sedan. Buick has created five commercials using the same theme; two similar spots are set in Germany.

The campaign, which breaks this week during prime-time TV, is in keeping with General Motors' and Chrysler Corp.'s recent assertions that American-made cars are just as good, if not better, than their foreign-made competitors.

Jay Qualman, Buick's general director of advertising, said the effort is aimed at buyers of mid-sized American sedans. The campaign, he said, allows Buick to further enhance its image for producing quality cars and position the Regal sedan as a formidable world-class contender.

Qualman

"We're not really after the import market," he said. "We're not saying we're building an import clone. We're not trying to put down the Germans or the Japanese. Our sales are on the upswing and our quality is good. We're the newest intermediate on the block."

Qualman said the effort is a major introduction for Buick that will be supported by a heavy media schedule. "You only get to launch a product once," he said. "The price of failure is high. When you have a new product, you can stimulate sales of other products as well."

Buick's TV commercials for the Regal sedan include two 15-second and two 30-second spots and one 60-second spot. All end with the tagline, "The symbol for quality in America and beyond" and display Buick's tri-shield symbol.

The commercials will appear on *Cheers* and *L.A. Law*, major league baseball games, Monday night football games, television movies and the Buick Classic Golf Open.

The print campaign features three-page color spreads attached to the covers of major magazines. Two-page spreads will appear later.

Qualman declined to say what Buick is spending on the launch.

L-M air-bag retrofit set for October

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

TEMPE, Ariz. — Lincoln-Mercury officials believe it will be late October before dealers will be able to retrofit passenger-side air bags into sold 1990 Lincoln Town Cars and Continentals. The retrofitting program could cost Ford Motor Co. several million dollars.

The automaker has been producing Continentals and Town Cars without passenger-side air bags since March.

A fire at Sabag Inc.'s Canadian plant in March curtailed shipments of propellant to Ford's chief air-bag supplier, TRW Inc., which manufactures the passenger-side air-bag modules for both cars. Sabag is a joint venture between TRW and Canada's ICI.

L-M General Manager Ross Roberts said Ford's first priority is to retrofit the 1990 models with passenger-side air bags.The bags will be installed on 1991 production cars after enough propellant is produced for the retrofit program. L-M dealers probably will have to retrofit 1991 cars built from September to late October.

Ford President Philip Benton said Sabag may have to defray some of the costs Ford will incur in installing the air bags in sold cars. The installation procedure is expected to take a dealer less than three hours per car.

As of May 18, 44,399 Town Cars and Continentals had been produced without the passenger-side air bag.

Roberts said Ford is projecting that 20 percent of 1990 Continental and Town Car owners will want the passenger-side air bag installed. But he said he believes 30 to 50 percent of consumers will request the retrofit.

Using an hourly rate of $40 per car and estimating a three-hour installation time, the retrofitting program could cost Ford as much as $2.6 million if the passenger-side air bags are installed in half the cars sold so far without them.

LATE NEWS

Mazda net income rises 58% to $168.2 million

TOKYO — Mazda Motor Corp. announced a 57.7 percent increase in net income to 26.5 billion yen ($168.2 million) for the fiscal year ended March 31. Net sales reached 2 trillion yen ($12.9 billion), an increase of 6.9 percent compared with the previous April-March term. Mazda changed its fiscal period in the last year. Before the change, the fiscal year ended Oct. 31.

Overseas sales were up only 0.8 percent to 805,997 units. That included what Mazda referred to as a "relatively small decline overall" in the North American market.

Mazda attributed most of its increased profit to strong sales in the Japanese market, where two new sales channels were established. Domestic sales set a record.

Honda net income falls 16 percent

TOKYO — Honda Motor Co. reported a 16 percent drop in consolidated net income to 81.6 billion yen ($517 million) for the fiscal year ended March 31. Honda attributed the decline to foreign exchange losses, interest costs, high depreciation costs and higher non-operating expenses.

A Honda North America spokesman said that early in the fiscal year Honda "hedged," or calculated its exchange rate in advance, assuming the yen would remain strong against the dollar. Instead, the dollar gained strength, which cost Honda money. For the fiscal year, $1 bought an average of 142.85 yen, compared to an average of 128.31 the previous year.

For the fiscal year, Honda reported a 10.4 percent increase in car sales in Japan and North America, to 3.8 trillion yen ($24.3 billion). The unconsolidated report, which did not include foreign subsidiaries, showed a net income decline of 1.3 percent to 53.2 billion yen ($337 million).

Fuji loses $187.3 million; year's loss higher than expected

TOKYO — Fuji Heavy Industries reported a 29.6 billion yen ($187.3 million) operating loss for the fiscal year ended March 31. That compares with the 23 billion yen ($145.5 million) loss the company forecast two months ago.

Most of the vital statistics for the company were negative. Net sales were 658 billion yen ($4.1 billion), a decline of 0.8 percent. Net income was 5.7 billion yen ($36 million), a drop of 47.3 percent.

Fuji attributed the losses to poor sales in the U.S. market and in the mini-market (under 660 cc) segment in Japan.

— Mary Ann Maskery

Ford hires Hispanic consulting group

Ford Motor Co. last week named the Hispanic Association on Corporate Responsibility a consultant on increasing Hispanic representation at Ford.

Ford will meet with the association at least once a year to review the company's accomplishments and plans for affirmative action and economic development. The association will identify Hispanic suppliers.

The Washington-based association is a non-profit coalition of seven national Hispanic activist groups. It targets corporations with agreements modeled after the NAACP's "Fair Share Agreement." Ford is the first automaker and fifth national corporation to sign the agreement.

Limo manufacturer group demands safety compliance from members

The Limousine Industry Manufacturer's Organization last week demanded that members participate in the new Safety Compliance Seal Program or be dropped from the roster.

Members have 30 days to sign a public declaration promising to adhere to federal safety standards, maintain a quality control system and provide proof that the product meets federal guidelines.

The program follows a federal crackdown on companies that ignored requests from NHTSA for production related safety compliance information or were subject to over 19 recall campaigns.

Bob Hellmuth, director of NHTSA's Vehicle Safety Compliance Office, says it is a "step in the right direction," but his office will continue to pressure the industry to reach and maintain total compliance.

Renault to repay $1.07 billion of subsidies

PARIS — Regie Nationale des Usines Renault SA will repay 6 billion francs ($1.07 billion) in government aid under a compromise settlement of a dispute between the European Commission and French government.

The amount is half the 12 billion francs ($2.14 billion) in aid received by state-owned Renault from the French government during 1988 in the form of a debt write-off. The subsidy was approved by the commission in Brussels at the time under terms the panel now says were not upheld.

Renault will return 3.5 billion francs ($537 million) immediately and 2.5 billion francs ($445 million) will be added to the company's long-term debt. French officials have indicated they might cushion Renault's loss through a capital increase next year.

The agreement with the EC bars a capital increase before Jan. 1, 1991, when AB Volvo officially takes a stake in Renault under a cross-ownership deal.

— Richard Johnson

Mitsubishi to join Daimler in building Soviet plant

TOKYO — Mitsubishi Corp. said it has agreed in principle to a request by Daimler-Benz AG to help build a large auto assembly plant in the Soviet Union. Daimler has announced that it wants to produce 240,000 to 300,000 units a year in a plant to be built near Gorki.

Some reports here say Mitsubishi would be expected to contribute commercial vehicles to the venture. But Mitsubishi Motors Corp. said Daimler has no concrete plan yet and that the project has to be considered as a long-term plan. Mitsubishi Motors said it is not planning to produce any vehicles in the plant.

In Stuttgart, a Mercedes-Benz AG spokesman confirmed that the two may cooperate in setting up an auto plant in the Soviet Union, but he said, "Nothing is decided. We've only had discussions." He said the plant would produce Mercedes' mid-range W124 line when production of those models ends in Germany.

Soviet truckmaker may offer 49% of shares to outsiders

FRANKFURT, West Germany — Kamaz, the state-owned Soviet truckmaker, may offer 49 percent of its shares to outside investors, including foreign companies, in a bid to raise fresh capital.

Kamaz Director Nikolai Bekh said in an interview with *Pravda*, the Communist Party daily, that the state enterprise needs an injection of funds to compete in world markets. He said the Soviet government could not be counted on to provide the 6 billion rubles ($3.6 billion) capital required over the next decade.

Issuing shares in Soviet companies has been permissible since 1988. The Kamaz proposal breaks new ground by allowing stock to a wider range of investors, including firms outside the Soviet Union.

Kamaz produces heavy trucks, most of which are exported to Communist bloc countries. The combine includes 13 factories throughout the Soviet Union.

— Richard Johnson

Acustar to invest $37.9 million in Michigan glass, axle plants

Acustar will invest $37.9 million at its McGraw Glass and Detroit Axle facilities, creating an additional 100 axle plant jobs.

Spokesmen for the Chrysler subsidiary said the investment is an effort to keep existing work forces and maintain the operations on a competitive basis.

McGraw Glass has 800 employees and is Acustar's primary glass facility. The plant recently completed a three-year, $65 million technological upgrade and will now get an additional $36.3 million for demolition of old warehouses. The added room is for construction of a Energy Conversion Center and primary substation.

Detroit Axle employes 1,000 and recently won a bid to supply Chrysler an additional 100,000 axles over the next two years.

BRIEFLY: *When Lido says buy, Lutz gives it a big try*

Chrysler Motors President Robert Lutz apparently has taken **Lee Iacocca's** message seriously. Earlier this year, Iacocca encouraged the company's 100 top managers to buy Chrysler stock. Well, Lutz said he will — in a big way. The auto exec is spending a year's salary on Chrysler stock. That salary, according to Chrysler's 1990 proxy, totaled $544,550 in 1989. Lutz already owns 7,058 shares and had options to acquire 246,500 more within 60 days, according to the April 13 proxy. Chrysler's common stock closed at $16 per share Thursday.

ROBERTS CAN STILL SELL 'EM: When asked, **Lincoln-Mercury General Manager Ross Roberts** can close a deal. Take, for instance, the New York attorney who was reluctant to take delivery of a Continental because a propellent shortage meant cars were shipped without the passenger-side air bags. To save the deal, a dealer asked Roberts to intervene. Roberts assured the attorney that the air bag would be installed as soon as possible. The attorney bought the car.

NEXT TIME, TRY ARUBA: The **Greater New York Automobile Dealers Association**, one of the nation's wealthiest dealer groups, last week canceled its June 3-6 convention because not enough dealers signed up. The association said many dealers couldn't spare three days away from the store due to the business climate. The speaker was to have been **Jerome R. McDougal**, president and chief executive officer of Apple Bank and a former Greater New York Automobile Dealers Association president. The location was Newport, R.I. Last year's convention was in sunny Bermuda.

STAR WARS: Who will have the largest privately held satellite communication network in the world? Well, **Chrysler Corp.** claims it will, once it completes linking its 5,400 dealers to the automaker's earth station in Highland Park, Mich. So far, 4,200 dealers are on line. **General Motors** says it will, once it connects its 9,700 dealerships to the GM Pulsat Network, which is expected by the end of 1992. Both systems are expected to replace "the existing land-based communications network" (which we used to call the telephone) and provide quicker movement of information between automaker and dealer.

Tough standards spawn optimism

Converters look for robust 1991 sales before new rules kick in

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

The sales outlook for the van conversion industry during the next 12 months is extremely good and will be aided by tougher federal standards due in the 1992 model year.

Industry officials point out that dealer inventories of van conversions are lower than last year, while retail sales are at least as strong as a year ago.

Most dealers are replacing what they sell with new wholesale purchases on a one-to-one basis, and some have shown a willingness to build inventory at least until mid-July, said Ron Chevalier, vice president of sales and marketing for Starcraft Corp.'s Automotive Division in Goshen, Ind.

Generally, interest rates are under control; fuel prices and availability are good; and Detroit manufacturers' incentive activities in support of vans are still strong.

General Motors dealers also can plan for buildout, since they no longer face the uncertainty over carryover allowances that plagued them at this time last year.

"Our order backlog has grown, and we're beginning to chase chassis. To the extent we find those chassis, we've increased production," said Chevalier, echoing sentiments of other converters like Glaval Inc. of Elkhart, Ind., and Mark III Industries of Ocala, Fla.

The 1991 model year has real growth opportunities from dealers and customers buying products before the 1992-model safety regulations kick in.

New crash-safety regulations will impact various structural and design aspects of van chassis, adding to cost.

But Dave Green, marketing manager of Bivouac Industries in Vandalia, Mich., said he believes pent-up demand will play an even stronger role in 1991.

He pointed out that in 1986 and 1987, which were strong sales years for the industry, many customers got into five- and six-year financing contracts.

After three years, those people "were still upside-down enough (owed more than their conversions were worth) to take a beating if they traded in their vehicles," Green added.

The 1986-model-year buyers are just now in a position to trade and, based on the high number of repeat van conversion buyers, "the last half of 1990 and 1991 should be very good, assuming there are no economic snafus," Green said.

"I wouldn't be surprised if the industry was up 7 percent in 1991," he said.

RECREATIONAL VEHICLE WHOLESALE DELIVERIES

Gem Top markets new truck cap

Gem Top Manufacturing Inc. of Clackamas, Ore., has a new KO model cab high polymer top for Ford and Chevrolet pickups. It is available in several colors, has solid sides and a black framed rear door with clear glass and gas operated struts.

Converters note upturn, but discounting hurts

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Van converters are reporting stronger production and wholesale sales, but the retail side of the business is still fiercely price-competitive.

For many converters, the 1990 model year got off to such a slow start that, despite month-to-month improvements since January, they'll miss their sales goals.

Heavy discounting also is a problem.

"It's unbelievable," said one converter. "We're in the middle of a Chevrolet chassis shortage, and the discounting is almost unbelievable. Nobody wants to give up any market share, and dealers are still holding the upper hand."

The protracted, heavy discounting — with its disastrous effect on profits — is a major reason why an estimated 50 to 100 converters have either gone out of business or put their businesses up for sale during the past year.

Slow sales earlier in the 1990 model year also played a role.

Mark III Industries of Ocala, Fla., expects to sell 27,000 to 30,000 vans in calendar 1990, according to A.R. Boyd, company chairman. That compares to 27,000 in 1989 and is a rather conservative projection.

As the industry's top volume producer, Mark III has been on a fast-growth track. It recently joined Ford's consignment pool system and has just begun converting chassis under the agreement.

Mark III has base conversions for $2,999 wholesale, but the majority of its business is with its deluxe package, Boyd said. That package wholesales for $3,500 to $5,200 depending on options.

"The only problem we have is with other people giving the stuff away," Boyd said, acknowledging the heavy discounting.

Mark III hasn't had to discount vans since January and has a good order backlog, he said.

Boyd attributed the order backlog to product value and to the firm's SafeMark program. The SafeMark program includes changes made in Mark III vans in anticipation of new federal standards due in 1992.

R.T. Boyd III, the company's chief executive officer, said Mark III has begun crash-testing its vehicles and making design changes in order to continue to be able to put its own seats in them and "maintain our identity" in its interior design changes.

New standards, such as Federal Motor Vehicle Safety Standards 208 and 204, will restrict a converter's ability to make chassis changes. Boyd said Mark III vans meet various 1992-model safety requirements, except those for driver safety in frontal impacts, which require air bags such as those Ford will install.

Meanwhile, Glaval Inc. of Elkhart, Ind., has reduced its 1990-model sales forecast slightly.

William Becker, Glaval's vice president of marketing, advertising and consumer relations, said the company now anticipates selling 17,000 to 17,500 units, about 1,000 more than last year.

Glaval is currently developing marketing support material for 1991 and plans to continue to emphasize products in the midprice range where the bulk of Glaval's sales are concentrated.

Coachmen Vans of Elkhart took a very conservative approach to the market this year. It managed to stay close to its internal profit goal during the first half of the 1990 model year by carefully controlling expenses and avoiding heavy discounts for the sake of big market-share gains, the company said. It expects to sell about 2,300 units, similar to the number it sold in 1989.

Its Good Times Van operation in Grandview, Texas, is expected to add another 2,300 sales, according to William Snook, Coachmen Van president and general manager.

The reduction in the number of van competitors hasn't really benefited Coachmen because most were very small companies with insignificant sales volumes, Snook said.

RV BRIEFS

Tern buys Van Express

SYRACUSE, Ind. — Tern Industries Inc. will double its manufacturing and office space by its recent purchase of Van Express, an Elkhart, Ind., van converter.

Under terms of the sale, Van Express operations will move from Elkhart to Syracuse, its personnel transferred to ensure that all dealer warranties and assistance programs will be carried forward smoothly, said Ernest Knepp, Tern's chief financial officer.

Joseph Sanders continues as Van Express president.

Tern purchased Van Express from Vyquest Inc. of Elkhart. Van Express has consignment pool accounts with Ford and Chevrolet. That gives Tern entry to Ford's pool system and doubles its availability of Chevrolet chassis, since it already had a Chevrolet pool of its own, the company said.

Studebaker pickups

ELKHART, ind. — Studebaker Coachworks has opened a plant specializing in production of custom-built pickup trucks.

The company's first model, called the Wild Thing, is based on the long-bed GMC Sonoma SLX, while a second customized truck, called the Turismo, is based on the GMC C-1500 full-sized pickup.

The Wild Thing features a specially designed, fully enclosed cab extension that is bolted to the bed of the truck, just behind the cab. The cab extension is accessed through the removable rear window of the cab.

The Turismo has a racy appearance: lowered front and rear, special grille and bumper and other exterior refinements.

Duraliner for vans

LAPEER, Mich. — Durakon Industries Inc. has introduced a Duraliner product to protect van interiors against scratches and dents.

The liners are designed for full-sized domestic vans used in commercial delivery services and for use by custom van shops and other business applications.

Separately, Durakon said it spent $4 million on new equipment and improvements for its Lapeer facility.

RV travel series

RESTON, Va. — A new recreational vehicle travel series produced by the Recreation Vehicle Industry Association will debut July 7 on the Nashville Network.

Titled *"Going Our Way,"* the 30-minute television program will air Thursdays and Saturdays and be hosted by country recording artist Jim Ed Brown and his wife.

Each program will feature RV trips to two distinctly different locations and a segment on practical RV information and tips, ranging from vehicle selection to the latest options and accessories.

Jim Ed Brown and his wife, Becky, will host RV travel series.

Europe's car sales dip

April off 2%, but 4-month total tops '89

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — New-car sales in Western Europe dipped 2.7 percent in April as volume fell in four of Europe's five biggest markets.

Sales continued to plunge in Great Britain and Spain and also slipped in West Germany and France. Of Europe's five major national markets, only Italy surpassed its 1989 sales total in April.

Sales in 17 Western European countries totaled 1,215,400 in April, according to industry estimates compiled by *Automotive News*. For the January-April period, volume was 4,949,300, just 0.93 percent ahead of the 1989 total.

The April figures suggest the long-predicted weakening of the European market is at hand. "There is going to be a bit of pain in the next couple of years," said auto analyst Daniel Jones of the University of Cardiff in Wales.

Sales in Britain slipped 12.2 percent to 168,000 in April and were down 8.7 percent for the year at 750,000. Spain was off 9.6 percent in April at 85,500. For four-months, sales in Spain were down 8.9 percent at 351,900.

West German sales were down 3.1 percent to 285,000 in April. But Germany, Europe's largest market, remained 3.1 percent ahead of last year with 1,032,700 for four months. Sales in France dipped 6.5 percent to 192,800 in April, but were 6.2 percent ahead of 1989 for four months with a total of 841,000.

The Italian market remains brisk. Sales there rose 10 percent to 230,000 in April and were up 6.4 percent at 970,400 for four months.

Riding the robust Italian market, Fiat Auto, including the Alfa Romeo and Lancia brands, led Europe's major car groups through April with 15.7 percent of the market.

Fiat Auto S.p.A. surged ahead 9.3 percent in April to 189,900 units. For four months, Fiat sales were 2.6 percent ahead of 1989 at 777,900 units.

Combining the VW, Audi and Seat marques, Volkswagen AG was up 2 percent to 193,700 in April and was up 5.2 percent to 741,000 for four months.

Peugeot S.A., including Peugeot and Citroen, was solidly entrenched in third place with 13.4 percent of the market on four-month sales of 664,700, a 2.2 percent increase over last year. General Motors Europe was fourth with 11.7 percent. GM's January-April sales increased 2.2 percent, to 578,200. The figures include 22,000 Saab sales.

Ford of Europe was next at 561,300, including 7,900 Jaguars. The Ford total was virtually unchanged from a year ago and represented an 11.3 percent share. Regie Nationale des Usines Renault S.A. was sixth with 10.4 percent of the market on four-month sales of 516,900, up 0.6 percent over 1989.

Among the specialists, Mercedes-Benz AG, BMW AG and Volvo Car Corp. all fell behind their 1989 four-month totals in Europe. Mercedes was off 2.4 percent to 154,000; BMW was down 5.4 percent to 134,500; and Volvo sales declined 6.8 percent to 92,300.

Combined Japanese sales for four months were up 1.3 percent to 523,100, good for 10.6 percent of the European market.

NEW-CAR SALES BY COUNTRY IN EUROPE

Country	4 Months 1990	Pct change vs. 1989

USED VEHICLE MANAGEMENT WORKSHOP

JUNE 11-13 ASHEVILLE, NC | JUNE 18-20 MEMPHIS, TN | JUNE 25-27 ORLANDO, FL

Major Topics of this Three Day Workshop are:

- Inventory Management
- Merchandising & Advertising
- Creative Prospecting Ideas
- Recruiting & Hiring Techniques
- Forecasting Guidelines
- Reconditioning

"Frank Cribbs is a professional, knowledgeable and experienced manager and teaches a no nonsense approach to increasing used car sales and profits."

ONLY $995.00 PER PERSON INCLUDES ROOM, BREAKFAST AND LUNCH BUFFET, WORKBOOK AND MATERIALS.

SATISFACTION GUARANTEED OR YOUR MONEY BACK!

Space is limited, so to make your reservation or for more information call The Smoky Mountain Training Center (704) 253-0201 today!

Toyota opens Tokyo center to tap trends

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Toyota Motor Corp. has opened a design center in Tokyo, where 30 employees are assigned to soak up the lifestyle, tastes and trends of the city.

It is part of Toyota's effort to branch out of the less-than-cosmopolitan atmosphere of the company's traditional base in Toyota City in central Japan. One reason for the action is a labor shortage that makes it difficult to attract top applicants to the countryside.

But Toyota also wants to tap into the fashion trends in the capital city at a time when severe competition in the industry is forcing manufacturers to stay attuned to the changing tastes of customers.

Citing the tremendous access to information in Tokyo, Fumio Agetsuma, Toyota senior managing director in Tokyo, said having a design center in the city means having a greater access than would ever be possible in Toyota City.

Mazda Motor Corp. made a similar move a year ago, setting up a design center in Yokohama and transferring about 100 executives to Tokyo from the company's home base in Hiroshima.

With the Tokyo addition, Toyota is promoting what it calls its "global design network," with design facilities in Tokyo, Toyota City, California and Brussels, Belgium.

Toru Nagisa, general manager of the Design Division, emphasized the need for a global approach to appeal to customers worldwide.

Pointing to a chart of beige tones Nagisa presented the results of surveys taken in Japan, Europe and the United States, all showing sharp national differences in choice of colors.

In offering his conclusion on the color differences, Nagisa inadvertently offered an example of why Toyota needs to get out of the provincial Toyota City base and deal more on an international level.

According to the color study Americans seem to prefer warmer shades of beige while Japanese prefer cooler tones. Nagisa concluded that "people with blue eyes are sensitive to the bluish shades while Japanese with brown eyes are not attracted to reddish hues." He noted how blue sunglasses can affect perception of colors.

Volvo profits plummet 52%

GOTHENBURG, Sweden — AB Volvo's pre-tax profits plunged 52 percent to 1.05 billion krona ($175 million) in the first quarter of 1990.

The firm blamed the decline on tough competition, higher product development costs and lower utilization of capacity. Volvo also reported that both car and truck sales declined during the first three months of 1990 from the the corresponding period in 1989.

Profits in 1989 fell 15 percent to 7.01 billion krona ($1.17 billion).

Profits of individual subsidiaries were not released. But Volvo said passenger-car deliveries fell from 106,000 in the first quarter of 1989 to 104,000 this year. Sales of the 200- and 700-series models from Volvo Car Corp. of Sweden declined 5.6 percent, while sales of the smaller 300- and 400-series models from Volvo Car BV in the Netherlands rose nearly 6 percent.

Volvo's car sales in the United States fell 11.81 percent, to 22,400, during the first quarter of 1990.

BRIEFS

Isuzu may get version of Subaru Legacy

TOKYO — Fuji Heavy Industries Ltd. is preparing to offer Isuzu Motors Ltd. its Subaru Legacy sedan for sale in Japan as the two companies step up their cooperation in marketing. Fuji is also planning to offer the Legacy as a successor to the Isuzu Aska.

Isuzu now sells the Subaru Leone van as the Geminett II at a rate of about 120 units a month. Fuji sells 50 Isuzu Bighorns a month as Subaru Bighorns.

Toyota, Renault sign Colombia truck deal

TOKYO — Toyota Motor Corp. will produce commercial vehicles in Colombia with SOFASA-Renault. It is Toyota's first association with the French company.

SOFASA-Renault will add Toyota's Land Cruiser to its line in October 1991 at a rate of 4,000 units a year. It will add a pickup truck at 3,000 a year in April 1992.

Toyota started negotiating with SOFASA-Renault in 1987 after the Colombian government passed regulations that restricted vehicle imports and limited local production to three companies.

Brazil and Argentina to revise auto pact

SAO PAULO, Brazil — Brazil's decision to open its borders to imported autos will make it necessary to revise the auto integration pact it signed with Argentina in 1986.

The idea behind the agreement was that Brazil and Argentina would open their borders to 5,000 cars a year from each other. In order to guarantee that preference scheme, the two governments will now study some form of tariff reduction on imports. The subject will be on the agenda of bilateral meetings in Buenos Aires, Argentina, May 28-29.

The Brazil-Argentina auto pact, although signed four years ago, has never come into practice.

CONTRACT Casualties

CONTRACT

FROM PAGE 1

their own extended warranties.

Service contracts, sold by independent administrators, manufacturers and importers, have grown into an industry with annual sales of $3.9 billion, according to Dave Robertson, president of Warrentech Dealer Based Services Inc., based in Euless, Texas.

Robertson

Robertson tried unsuccessfully to form a trade association two years ago.

An association of vehicle-service-contract administrators could set standards and provide zealous state lawmakers with information about the business before they enact laws to regulate it.

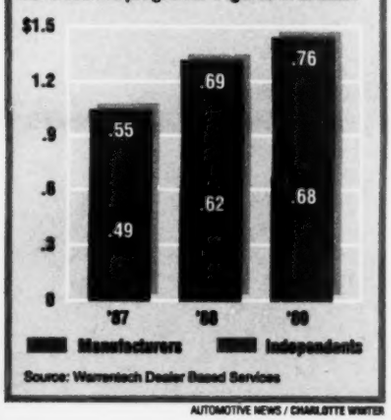
But of the roughly 20 major companies operating nationally and dozens of regional administrators, Robertson drew only a handful of interested people to the first — and only — meeting.

Administrators create the programs, then persuade carriers to underwrite them and dealers to sell them. They also adjust claims from customers on behalf of the car dealer.

But even Williams — a low-volume, regional player — concedes: "The service-contract business has got a pretty bad reputation."

Although car dealers typically make a gross profit of $200 to $400 when they sell a service contract, many of them would agree with Williams.

Contributions to dealer profit



AUTOMOTIVE NEWS / CHARLOTTE WINTER

'Nightmare,' says dealer

David Wilson, owner of Toyota of Orange in Orange, Calif., characterized his experiences with independent extended-contract administrators as a "nightmare you want to forget."

Wilson now sells only factory-sponsored service contracts.

"We have sold service contracts to 10,000 customers and have had horrific financial losses," he says.

Toyota of Orange sold contracts through four administrators. All of them folded, says Wilson. And he says in no uncertain terms that when insurance companies take over the administration of service contracts from defunct administrators, they don't care about dealers or their customers.

Wilson

Wilson contends his dealership has lost more than $1 million in repairs that he was never reimbursed for. "We don't know where the reserve funds have gone, so as the selling dealer we have to pay the claims," he says.

For example, Wilson says he sold contracts generating $457,820 for United Dealer Group, based in Phoenix, Ariz., which folded in 1985, and was never reimbursed for repairs. He also had difficulties on claims from Compact Services Corp., a subsidiary of Dallas-based Republic Insurance Corp.

Republic created Compact last year to process claims after assuming more than 600,000 extended-service contracts sold by ESC Administrators Inc. of San Diego.

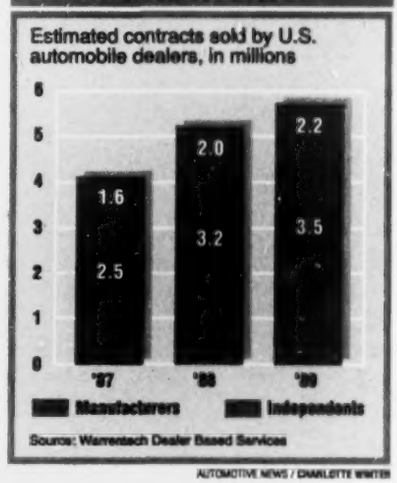
"For months, Compact alienated my customers by the hundreds," Wilson says. "This is killing the car industry. The way this has been handled, none of my customers will buy a service contract. I'll be lucky if they come back to buy a car."

With so many administrators in retreat, thousands of new-car dealers are potentially on the hook for repairs guaranteed by the contracts they sold.

The most common dealer complaint is that insurance carriers, left in the lurch by insolvent administrators, tend to flyspeck customer claims in order to staunch the flow of red ink. The reason: By the time carriers step in, reserves to pay claims are typically either depleted or non-existent.

It's even harder to calculate how many consumers are hurt when administrators become insolvent. That's because in many instances the insurers or dealers stand the losses by paying claims.

Service contract volume



AUTOMOTIVE NEWS / CHARLOTTE WINTER

Bust is boon for consultant

For Joe Remoaldo, the bust for administrators has been a boon.

An industry veteran, he was formerly vice president of national claims for American Warranty Corp. in Skokie, Ill., and vice president at General Warranty Corp. in Harbor City, Calif., two companies that are still active in extended-service contracts.

Remoaldo left the retail side of the business five years ago because, he says, he didn't like the direction the fledgling industry had taken.

"It's ironic that the administrators can do some of the things that they do. It's like the fox guarding the chicken coop," he says. "The dealers are biting the bullet. That's why I got out of it."

From his offices in La Palma, Calif., Remoaldo rates extended service contracts for dealers and helps them collect on claims from insurance carriers.

Remoaldo

He has a generally dim view of the industry. He says many administrators are having trouble finding carriers to underwrite their programs. "Only two or three of the stronger service-contract companies will survive along with the manufacturers," he says.

Although that probably overstates the industry's woes, most executives concede that a shakeout is going on. But they contend it is striking only smaller, regional companies. Administrators operating nationally, they say, are on solid ground.

A fledgling industry struggles

The extended vehicle-service-contract industry was started in the mid-1970s by entrepreneurs like Jerry Farrar, president of General Warranty Corp., of Harbor City, Calif.-based General Group International, and by others who sold credit life insurance policies to car buyers through dealerships.

They spotted a chance to sell additional vehicle coverage beyond manufacturers' warranties.

Almost from the outset, the industry had its share of failures. Warranty Management Corp., a Florida firm, was one of the first to fold, in 1978.

The collapse of North American Dealer Group of Cranford, N.J., two years later is legendary among dealers and others associated with the industry because of the company's huge volume. Its insurer, Proprietor's Insurance Co. of Delaware, Ohio, paid only what it called "legitimate" claims. As a result, thousands of dealers sustained hefty losses, says Remoaldo.

More recently, Industrial Indemnity Corp. assumed hundreds of thousands of contracts from Los Angeles-based Mechanical Insurance Associates, an administrator, when Mechanical foundered in 1937.

At least six companies halted or significantly reduced operations in 1988, including Northwest Underwriters, based in Seattle. Among those folding last year was Thermo Guard Warranty Corp. of Boca Raton, Fla.

Several weeks ago, Super Safe Warranty Inc. of Clarksville, Tenn., which had 60,000 contracts in force, filed for liquidation under Chapter 7 of the U.S. bankruptcy code.

With the high number of casualties among administrators, insurers have grown skittish about underwriting extended-service contracts. "There is not the pool of insurance company underwriters willing to participate in this kind of business," says Walt Cabe, vice president of marketing for CSC Logic Inc., a Dallas-based computer company that services the industry. "Very frankly, it has not been profitable for insurers."

Administrators need insurance from carriers to show dealers and, in some states, the department of insurance, that their contracts are backed by a full-fledged liability and casualty insurer.

Casting further shadows over the industry, some administrators have been accused of fraud. Others simply underfunded reserves to pay claims.

"This is a business where stupidity will get you in as much trouble as dishonesty," quips Robertson of Warrentech Dealer Based Services.

Stage is set for hassles when administrator pulls out

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Most vehicle service-contract administrators deny that car buyers are hurt when administrators fold.

Even if the administrator goes belly up, they say, either insurers or dealers will pay to repair the vehicles.

"There may have been cases where the deductible is an issue, but by and large, major component repairs covered by extended service contracts are paid," says Dave Robertson, president of Warrentech Dealer Based Services Inc. in Euless, Texas, one of the biggest and most successful administrators.

But James Bankston, a Dallas-based multi-franchise dealer, disagrees. "Whenever a fourth party (insurer) takes over administration, both the customer and dealers are hassled for documentation on repairs," he says.

That's when a customer's contract is scrutinized, and claims are denied for reasons found only in the fine print.

Says Bankston: "If the water pump is out, they ask how many times the car has had an oil change. What that has to do with the water pump, I don't know."

Thomas Moore, of Arlington, Va., bought a Ford Tempo and an extended service contract for $598 at Springfield "Rainbow" Ford in 1986. The contract was backed by Borg-Warner Insurance Services Inc. of Chicago, a former unit of Borg-Warner Corp.

His troubles began last fall when his Tempo developed front-end vibrations.

Moore figured his extended service contract would cover repairs.

But Borg-Warner had withdrawn from the service contract business. And another company, Compact Service Corp. of Dallas, was administering some of its extended service contracts.

Meanwhile, the dealership had changed ownership. The new dealership, Springfield Ford, refused to honor the contract unless Moore prepaid $1,500 for repairs.

"It took me three days just to find out that Borg-Warner was out of the service contract business," Moore says.

He says none of the dealerships in the Virginia area would honor the extended-service contract.

"They said I would have to collect the money myself from Compact," Moore says. "Service managers told me it was taking them a year to collect from the company."

Moore tried to collect, but there was a catch. He couldn't get authorization or claim numbers because Compact gives them only to dealerships, not customers.

And, of course, Compact couldn't pay him without authorization and claim numbers, which it refused to give him.

In the end, Ford Motor Co. stepped forward to pay for the repairs under the car's original warranty, which the dealer mistakenly believed had expired.

Still, Moore had to pay a $100 deductible and the cost of renting a car because his was tied up for more than a month while he wrangled with dealers, administrators and insurers.

Moore says, "I had to pay a deductible and rent a car — things that are covered under the extended service contract."

Dealer profits high

Because extended-service contract administrators aren't insurers, few states regulate them heavily. Florida and California are the notable exceptions.

The Big 3 and some importers began peddling their own extended-service contracts seriously in the mid-1980s. But for dealers, they generally offer smaller profit margins than do the independently administered service contracts.

Prices vary greatly, both to the dealer and to the ultimate customer.

A small Midwestern regional administrator says the cost to dealers for its extended-service contract is $395. Dealers try to sell it for a 100 percent gross profit: another $395. Another major administrator says the dealer makes $200 to $300 on its contracts while the administrator takes a fee of $80 and about $285 goes into the reserve fund.

In New York, the attorney general's office recently accused dealers of gouging customers on manufacturers' extended warranties. On average, consumers paid $268 over the recommended price for Ford Motor Co.'s service contract, $265 over the recommended price for GM's and $273 over the recommended price for Chrysler Corp.'s.

CONTRACT Casualties

Dealer gives tips on landing the best extended-service contract

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

For 15 years, Irwin Garsten, president of Garsten Motors Inc., has sold independently administered extended-service contracts virtually without trouble.

"My experience has been excellent, and I have dealt with four or five different administrators," says Garsten, who owns a Honda-Isuzu-Chrysler-Plymouth dealership and co-owns Kinney Motors Inc., a Chevrolet-Oldsmobile-Saab dealership, both in Riverhead, N.Y.

Among those administrators are American Warranty based in Lincolnwood, Ill.; General Warranty Corp., based in Harbor City, Calif.; and Warrentech Dealer Based Services Inc. of Euless, Texas.

Garsten sells about 40 independently administered contracts per month. He prefers them to factory extended contracts.

"The margin of profit is better than the factory extended warranties, and what they cover is often better, too," he says.

His advice to dealers when selecting an administrator: "Look for someone who's in it for the long term. If you only look at the price, then you are bound to get stuck."

Dealer Irwin Garsten: "My experience has been excellent."

Before Garsten settles on an administrator, he does an extensive background check, getting references from other dealers and the state dealer association.

High on his list is how long the company has been in business.

Walter Cabe, vice president of marketing for Dallas-based CSC Logic Inc., a computer software firm servicing the extended-service-contract industry, says if dealers don't have a copy of their insurance policy, they should obtain one. "This may sound elementary, but many dealers have no policy," he says.

"In other words, they are operating without a contractual agreement. When things go upside down, what's in writing governs who pays. There are many programs where the dealer has operated on somebody's word that they are insured," he says.

Dealers should also pay attention to the time the administrator takes to reimburse them for claims and refunds of cancellations.

"A dealer should monitor that just like any other receivable," Cabe says. "If an administrator is running 60 or 90 days past due, then it is time to start asking some very tough questions."

Cabe says dealers should take the temperature of their general agents. Most of their contact with the administrator is through that individual sales rep.

"An early warning signal to an administrator with financial problems is always the agent — the guy who brought him the product," Cabe says.

He says most legitimate indepenedent administrators have had significant rate increases during the past two years.

"If there have been no rate increases, start asking questions," Cabe says.

He says that if the agent brings the dealer new programs every few months, that should also raise a red flag that an administrator is experiencing financial difficulties.

tracts are slipping in favor of manufacturers' extended warranties, according to some industry officials.

Robertson estimates that domestic automakers and importers now account for about 60 percent of all service contracts sold.

"Dealers are starting to shy away from private-label service contracts after being burned by one administrator after another," says John Tomashoff, investigator for the California Department of Insurance.

Joseph J. Pero, who runs General Motors' vehicle-service-contract operation, predicts that "insolvencies and abuses" by some companies will lead to increased regulation of the industry.

Pero

Pero is president of GM's Motors Insurance Corp., which sold more than $1 billion in service contracts last year.

But he told a symposium earlier this month that the penetration of service contracts will diminish as the quality of cars continues to improve.

That still leaves a huge market for independent companies.

Robertson estimates that dealers sold 5.7 million contracts on new and used vehicles in 1989, 3.5 million for manufacturers and 2.2 million for independent administrators.

Coverage and prices vary. Typically, a dealer sells a six-year/75,000-mile extended-service contract covering major components. The customer pays $600 to $800, depending on ability to bargain.

The dealer takes a profit of $200 or more for selling the contract and sends the administrator the remainder.

The administrator pays the general agent, an independent sales representative, a commission for selling the program to dealers and then takes an administration fee. Carriers also take a fee for underwriting the contract.

The remainder — in this hypothetical case about $280 — is placed in a reserve for payment of claims. It is managed by either the insurer or the administrator.

Fraud charges leveled

Insurers and administrators also take profits by withdrawing funds from reserves over the length of the contracts. The insurance company apportions the reserve so that funds are drawn at the same rate at which the claims are expected to occur. If claims are less than projected, the insurer can still withdraw the money. Of course, if claims are greater than earned reserves, there is an underwriting loss and no money is paid.

"The process allows the underwriter to measure the profitability of the venture throughout the term rather than wait until the risk has expired," says Robertson.

But in some cases, the amount reserved fails to cover the cost of future claims.

Administrators "all fold eventually," says James Bankston, a Dallas multi-franchise dealer and president of Bankston Enterprises Inc. "After about five years, they start operating (paying claims) out of income (from new sales), and then it's only a matter of time before the claims exceed the income."

Industry executives deny this happens today. State departments of insurance, they contend, monitor the industry for fraudulent administrators perpetrating this kind of scheme. They concede, however, that it did happen a decade ago when the industry was in its infancy.

Bankston

Bankston says he has dealt with three administrators. All are now defunct. He characterizes his experiences with them as a continuous hassle, causing dollar losses to his dealership and unhappy customers. He now sells only factory-backed extended warranties.

In some rarer instances, administrators have been accused of fraudulently diverting reserves for uses other than payment of claims.

In the case of Mechanical Insurance Associates, the California Department of Insurance has accused President Anthony Joplin and Vice President Daniel Grimsley of diverting $2.4 million of reserve funds "for their own use." The allegation was brought in a state licensing proceeding.

When the company folded in 1987, its insurer, Industrial Indemnity Corp., became responsible for payment of claims made against the hundreds of thousands of contracts Mechanical Insurance Associates had sold, according to Mechanical's attorney, William Rosensweig of Mathon & Rosensweig in Beverly Hills, Calif.

State insurance officials also allege in another licensing proceeding that Manufacturers Insurance Services Corp., a separate company from Mechanical Insurance Associates but also involving Joplin, issued service contracts that listed a fictitious insurer, diverted premiums and loss reserve money and failed to reimburse new-car dealers for approved repairs.

In another instance, Integrity Insurance of Paramus, N.J., leveled charges of fraud and racketeering in a civil suit against United Dealer Group when United Dealer Group folded in 1985.

In that imbroglio, more than 1,300 auto dealers in 39 states were left wondering what happened to the millions of dollars remitted to United Dealer Group.

But some are stable

Of course, not all administrators are awash in red ink or on the brink of insolvency.

Jerry Farrar says his company, General Group International, founded in 1981, paid out $100 million in claims last year to customers and dealers.

Farrar

Among others, Pat Ryan & Associates, based in Chicago, and Warrentech Dealer Based Services are stable, respected firms that have properly reserved funds, pay claims in a timely fashion and are profitable for dealers.

Still, Farrar concedes that few insurers have profited from the extended-service-contract industry. "Most of the insurance companies have not made an underwriting profit from the sale of extended-service contracts," he says.

Even General's first insurer, Imperial Casualty, lost $10 million underwriting its contracts when claims exceeded the reserve, Farrar says.

And Maryland Casualty, General's current insurer, could lose $15 million by the time the last of the service contracts sold by General in 1987 and 1988 expire. "Our current actuarial analysis is that Maryland is somewhere between break-even and maybe a slight underwriting profit on our 1989 and 1990 book of business," Farrar says.

Administrators are almost never at risk even though they design the contracts, sign dealers to sell them, and persuade carriers to underwrite them.

If they become insolvent or choose bankruptcy, somebody loses -- either the carrier, the dealer or the customer.

Sometimes, as in the case of Mechanical Insurance Associates, the carrier cancels the administrator, who then must find a new insurer or discontinue selling contracts. Claims from contracts still in force are processed by the insurer or its designee.

SuperSafe tumbles

SuperSafe Warranty Inc., an administrator based in Clarksville, Tenn., filed for bankruptcy Jan. 2.

Jane Forbes, appointed trustee by the U.S. Bankruptcy Court for the Middle District of Tennessee in Nashville, says about 60,000 extended-service contracts, sold by dealers across the country, were in force when SuperSafe folded.

Forbes says the company was bonded rather than insured. She was unaware of any reserve funds set aside for payment of service contract claims.

Forbes expects the bonding companies involved to pay the maximum amount of their surety bond requirements, which she says could be as much as $450,000, to the bankruptcy court. But that could be far short of the amount needed to pay claims.

"Everyone will have to fight over the money in court," Forbes says.

Joe Stratta, general manager of Allen Honda in College Station, Texas, says the dealership sold SuperSafe's service contract on both new and used cars for about three years. "We will stand the losses on repairs to customer's vehicles," he says.

George Grubbs Sr., owner of Grubbs Enterprises Inc., an auto dealership in Bedford, Texas, says his dealerships had sold SuperSafe's extended service contract for a decade. "We have established our own reserves and are allocating money to handle claims," he says. "We don't expect heavy losses."

Grubbs is funding his reserves with a small amount of the receipts from each new car he sells.

see CONTRACTS, page 24

Filling the gaps with a little variety

Extended service contracts have a variety of special selling features.

For example, some offer to pay for a rental car while the owner's vehicle is in the shop for repairs. Others promise to pay the factory warranty's $100 deductible.

Essentially, the contracts either fill the gaps in a manufacturer's vehicle warranty or extend coverage beyond the warranty period, sometimes for as long as seven years.

Usually, service contracts are tied to the length of time a car is financed.

If a customer finances a vehicle for 48 months but the factory warranty is 36 months, the extended service contract provides coverage for the remaining 12 months.

Dealers set retail prices for extended service contracts. And it is not unusual for two customers buying the same vehicle from the same dealer to pay different prices for the same extended service contract in most states.

— Charles M. Thomas

CONTRACT Casualties

CONTRACTS

FROM PAGE 23

Sometimes, an insurer founders at about the same time as the administrator.

Central National Insurance Co., based in Omaha, Neb., recently went into what the state calls "rehabilitation," which for an insurer under Nebraska statutes is a step short of liquidation. Many companies in rehabilitation ultimately are liquidated.

Central was one of several underwriters for Universal Dealer Services, a Laguna Hills, Calif.-based administrator that folded in 1988 after selling about 75,000 extended service agreements.

Dennis Simms, claims manager for Central, says losses on claims for Universal Dealer Services contributed to the insurer's problems. "Universal's losses were sizable," he adds.

Central National continues to pay claims on Universal's service contracts. Simms says only 8,000 contracts will still be in force by August.

Says Tim Wagner, executive vice president of Central National: "Service contracts are a dangerous business unless the insurer controls everything."

As a result, insurers continuing to underwrite programs will probably demand more control over the administrator.

"One of the trends you will see . . . is that the insurers are gaining direct financial control of administrators," says Cabe of CSC Logic, who observes the industry as a computer services supplier. "American Warranty's relationship with its insurer, United Equitable, is a good prototype of that."

Canadians troubled, too

Troubles haven't been limited to U.S. companies. Seven Canadian import-car firms selling Mazdas, Hyundais, Nissans, Toyotas, Subarus and Volkswagens agreed to honor about 400,000 extended warranty contracts sold by International Warranty Co., based in Edmonton, Alberta, after that company went bankrupt in 1988.

In another instance, 40 U.S. car dealers and 1,000 Canadian dealers and their customers were affected after the collapse last summer of Florida-based Thermo-Guard Warranty Co. and Canada-based Guardall Financial Services Corp.

Dealers were left with little hope of recovering money from Thermo-Guard after repairing vehicles under its service contracts.

Its demise has kindled several lawsuits between customers and dealers over who will pay for repairs.

The principal owner of both companies is Florida businessman Seymour Ravinsky, who closed Guardall Warranty Corp., based in Mississauga, Ontario.

He filed for bankruptcy in March 1989 after the Ontario government padlocked the company and froze its assets for failing to maintain sufficient loss reserves.

Insurers abandon market

Maryland Casualty Co. jolted the industry last winter when it told Farrar's General Group International that it would discontinue insuring vehicle service contracts on March 3.

The General Group is regarded as one of the more stable companies in the industry. But even Farrar had difficulty finding a carrier to replace Maryland Casualty because of General's huge volume of contracts, estimated at 45,000 per month.

"We talked to about 25 insurance companies, and all of them had an unhappy experience in the business," says Farrar, the president and chief executive officer.

The solution came in March when Farrar announced that Maryland Casualty agreed to continue insuring General's service agreements.

The cost of independents

Why do some dealers prefer independently administered service contracts to factory contracts? The independents are typically less expensive than factory contracts, which makes them easier to sell and which gives room for higher margins for the selling dealer.

Moreover, independently administered contracts typically promise to pay dealers for repairs at a retail rate, unlike factory-backed plans, which pay at a lower factory-approved hourly rate.

But industry insiders such as Robertson of Warrentech Dealer Based Services say independents that have prospered realize they must charge higher prices to maintain adequate reserves.

They point to Pat Ryan Insurance Group, based in Chicago, as an example. Ryan has one of the most expensive and soundest programs in the industry.

Robertson says independently administered service contracts are now only slightly cheaper than factories' contracts. Still, he says dealers must share some of the blame for the industry's troubles. If they sold less-profitable, better-reserved contracts, fewer problems would arise.

Dealers are too quick to change administrators if a new, cheaper product comes along, Robertson says. "The extended service contract business is not going away, and it is changing for the better," he says. "If the administrator puts enough money in reserve and monitors reserves, then the process will work."

Farrar agrees. He says most insurance companies are concerned about whether service contracts will be priced on actuarial data or just to buy market share.

"If they (independent administrators) are going to set prices on market share, then the insurance companies just don't want them," he says.

Meanwhile, Jim Williams, whose company's sales withered because it took so long to find a carrier for his program, says insurance companies should provide better actuarial information on mechanical breakdowns.

"Responsible insurers can't point their fingers at administrators," Williams says. "They had some responsibility to provide accurate numbers."

Williams' company exemplifies what can happen when insurers pull out. First National Warranty sold 3,000 contracts per month at its peak in 1988 through more than 400 dealers in Wisconsin, Illinois and Georgia.

That was also the year he was canceled by his carrier.

Williams says he contacted more than 2,000 insurance companies and obtained interviews with 14 before finally reaching an agreement with one.

But six months later, he was again canceled and on the prowl for yet another carrier. By the time he found one willing to underwrite his program, he says he had lost his customer base to competitors.

Service-contract lawsuits abound

Lawsuits abound in the extended-service-contract field. Among them:

- When Dallas-based Republic Insurance Co. created Compact Services Corp. last year to assume ESC Administrators' 600,000 extended-service contracts, dealers complained of long delays in authorization for repairs.

Don Drennen Motor Co. Inc., parent of Don Drennen Buick of Birmingham, Ala., did more than complain. It sued ESC, Compact Service and Republic last September for $50,000 in unpaid claims. Drennen alleges that some claims were lost, some approved claims were withheld and dealers were not advised how to receive authorization on new claims.

According to the suit filed in U.S. District Court, Compact refused to reimburse Drennen for sales tax on parts or car rentals for customers and charged a $50 deductible that allegedly was not part of the original contract. A federal judge has since denied a summary judgment to defendants asking for dismissal of the lawsuit.

- A superior court judge in Lenoir County, N.C., struck down a class-action suit against defunct National Warranty Co. of Kinston, which sought refunds for 30,000 buyers in North Carolina, South Carolina, Virginia, West Virginia, Georgia, Alabama and Texas who had paid about $7 million for extended-service contracts. The decision is being appealed.

National Warranty's underwriter, Insterstate Casualty Insurance Co., is now in liquidation.

The suit charges that in 1986, the company canceled contracts without refunding remaining time or repairs to vehicles.

- Nissan Motor Corp. in U.S.A is locked in bitter litigation with its former in-house extended-service-contract administrator, Adesco Corp. of Tulsa, Okla.

Burdened with huge loss ratios, Adesco accused some Nissan dealers of fraudulent repair claims. When Adesco threatened to stop processing claims and sued some Florida dealers in 1988, Nissan answered with a lawsuit to force Adesco to live up to its obligations.

Nissan has since taken over the administration of hundreds of thousands of contracts sold by Adesco. The trial is expected to start in July.

Contract sellers must meet strict regulations in Florida

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Gary Mills has several file drawers brimming with paperwork from companies that tried but failed to meet state guidelines to sell vehicle service contracts in Florida.

Mills oversees the licensing of what the state calls "motor vehicle service agreement companies."

"I have two or three file drawers of guys who failed to make it through the licensing process," says Mills, an examiner for the Florida Department of Insurance. "Others file and just don't want to fool with us."

Only 40 companies have made it through the rigid licensing process set forth in State Code 634. But Mills insists that successful companies find Florida a favorable state for business.

Mills' duties are varied. They include review of all financial data submitted by companies, making sure companies comply with regulations, field examinations of the financial condition of companies and verification of their records and data.

He says Florida laws regarding the sale of vehicle service contracts are probably the most rigorous in the nation. "In Florida, you can't just put together a program and sell it through dealers like in other states," he says. "We require that whoever sells motor-vehicle service agreements must be a single-line insurance company."

Warranties or extended-service contracts are treated like insurance products in Florida. Administrators must be licensed.

In most states, the dealer who sells a contract is the obligor, the company obligated to fix the vehicle under terms of the contract. "In Florida, administrators sign up dealers to be sales representatives as opposed to simply issuing their paper," Mills says. "The dealer is the obligor in most states, but in Florida, it is the administrator."

A special Florida law has created a category for a single-line insurance company — a "motor vehicle service agreement company."

Regulations are stiff. Depending on the volume of business it wants to do, a company must have a minimum net worth of $300,000 to $1 million to apply. Half of the retail price of the contract must automatically be reserved to pay claims later. And all contract rates are on file with the state so customers can know what they are.

"Because Florida approves all contract rates, dealers can't sell them for what the market will bear as in other states," Mills says.

However, administrators can obtain contractual liability insurance from a full-fledged casualty and liability insurer. But the insurer must honor all claims and obligations if the administrator folds.

Florida also has extensive financial reporting requirements and periodic examinations of the financial condition of administrators. In addition, all sales forms must be approved by state officials. Even manufacturers like General Motors fall under the same regulations.

The laws were designed to allow administrators who meet the requirements to operate in the state without being full-fledged insurance companies.

"We realized extended-service contracts were a special product and we didn't want to limit it to just full-fledged insurance companies," Mills says. "We wanted to give some flexibility to companies that did not have the wherewithal to be a full-fledged insurer."

Honda dealers get rebates on Civic, CRX and Prelude

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

After staying out of the incentive game for several months, American Honda Motor Co. Inc. placed factory-to-dealer incentives on 1990 Civic, CRX and Prelude models.

Meanwhile, Ford Motor Co. and Mazda Motor of America announced adjustments to their customer and/or dealer incentive programs.

Through June 30, Honda dealers earn $300 to $600 on sales of Civic sedans and station wagons and CRX and Prelude models. The base Civic three-door hatchback is excluded from the dealer rebate program.

The rebates are based on performance against quotas established by Honda.

Ford extended its current customer incentive program until July 9 with some adjustments. It increased the customer incentive on 1989 and 1990 Ford Crown Victoria from $750 to $1,000. Also, added is a customer rebate of $3,000 on 1989 Scorpio and $4,000 on 1988 Scorpio.

Ford's dealer incentive program includes: 1990 Taurus SHO, $1,000; 1989 Taurus SHO, $2,000, 1989 and 1990 Tempo GL non-special-value models, $250; and 1989 Ranger, $500.

Lincoln-Mercury dealer incentives are as follows: 1990 Lincoln Mark VII, $1,000; 1989 Mark VII, $3,500; and 1989 and 1990 Mercury Grand Marquis, $1,000. The Ford and L-M dealer incentives expire July 9.

Until June 4, Mazda is offering customers $1,000 on 1990 626, $750 on 1990 MX-6 and either automatic transmission or air conditioning free of charge on 1990 Protege.

The previously announced $750 customer rebate on 1990 323 models continues through June 4.

Mazda's program for truck buyers includes 1990 two-wheel-drive, $1,000 plus either SE5 or LE5 trim package free of charge; and 1990 4wd, $800 plus either SE5 or LE5 trim package free of charge. The program ends July 3.

NISSAN

FROM PAGE 6

"We have a typical dual management setup with typical Japanese 'shadow managers,' " says Dick Recchia, executive vice president of Mitsubishi Motor Sales of America Inc. "Shadow managers work with each vice president, and their function is important because it frees the VP from having to worry about keeping up with Japan."

As vice president and general manager of Toyota Motor Sales U.S.A. Inc.'s Lexus Division, J. Davis Illingworth says Lexus has a two-tier management structure like Toyota's and other companies'.

"We all coordinate with a counterpart on the Japanese staff," Illingworth says. "It's not language, it's not culture, it's people communicating with other people. If they trust each other, it works."

Wall Street analyst Maryann Keller says American executives must be realistic when they join the American import companies.

"I doubt that they're much involved in long-range strategic planning, but then I'd say, 'Why should they be?' " Keller says.

"You have to recognize these companies for what they are — they're marketing organizations, period. . . . Fundamental international and corporate strategy is always going to be made by the Japanese."

Although Nissan's written policies reflect those of some other U.S. operations, Tom Elliott, senior vice president of operations for American Honda Motor Co. Inc., notes a big difference at Honda.

"There are no written policies about how to communicate with Japan," Elliott says. "And frankly, I don't have to get anyone's permission to talk to Japan."

ACE

FROM PAGE 3

sign," said a Ford spokesman. No other prototypes or body mockups emerged, though a rolling chassis was built and has been run."

Ford of Europe Chairman Lindsey Halstead told *Automotive News* at the Geneva show in March that the Ace was coming along "very, very slow, painfully slow, dreadfully slow." Other AC insiders said the $1 million prototype was sitting in a corner of the plant under a layer of dust.

A Ford of Britain spokesman cited "lack of progress on the AC Ace sports car and the belief that the business is no longer viable."

"There were technical obstacles to be overcome and the costs of overcoming them were not justified by that level of volume," he said. He did not specify the snags. An Ford official cited "a breakdown in the relations between Ford Motor Co. and Brian Angliss."

Ford last week asked a British High Court judge to appoint a receiver to sell the company's assets, which include the factory, equipment and the AC name. The spokesman said Ford is not interested in the Brooklands plant. "It wouldn't be large enough to do anything with," he said.

No further court date has been set, but the matter is not expected to resume for several months. The Ford spokesman said Angliss' attorney intended to oppose Ford's request.

Angliss did not return phone messages last week. An Autokraft employee said, "He is tied up with a lot of calls and a lot of legal work at the moment."

No overtime; car-truck output slips

By Karen Detkowski
AUTOMOTIVE NEWS STATISTICIAN

U.S. car and truck assembly plants are closed today in observance of Memorial Day.

Automakers scheduled 136,786 units last week, 4.95 percent below the previous week and 7.80 percent below the year-ago week.

Truckmakers planned to build 91,127 units last week, 7.79 percent below the prior week but 4.96 percent above the year-ago week.

The car and truck estimates do not reflect any production lost because of parts shortages caused by the blockade by truckers at the border between Detroit and Windsor, Ontario.

Estimated production last week was shared as follows: General Motors, 46.88 percent; Ford Motor Co., 22.61 percent; Chrysler Corp., 11.92 percent; Honda of America Manufacturing Inc., 6.54 percent; Toyota Motor Manufacturing U.S.A. Inc., 3.24 percent; New United Motor Manufacturing Inc., 3.07 percent; Diamond-Star Motors Corp., 2.20 percent; Mazda Motor Manufacturing (USA) Corp., 2.06 percent; Nissan Motor Manufacturing Corp. U.S.A., 1.15 percent; and Subaru-Isuzu Automotive Inc., 0.33 percent.

Big 3 and transplant producers scheduled no overtime last week because of the holiday weekend.

Chrysler reported production at its St. Louis No. 1 plant will be extended seven weeks to Nov. 9. The original closing date was Sept. 21. The plant assembles Chrysler LeBaron J and Dodge Daytona cars.

The extended production will enable the company to complete early 1991-model-year fleet orders, especially convertibles. The plant employs 2,300 workers.

Truckers blockade cuts Canada output

Canadian vehicle production was cut last week as independent Canadian truckers blocked the truck lanes of the Ambassador Bridge, which links Detroit and Windsor, Ontario.

The Canadian truckers were protesting government free-trade policies, which the Canadians say undercut their ability to compete with U.S. truckers.

Car and truck producers ran low on parts and were forced to send workers home or reduce working hours.

The blockade began Tuesday night and ended Thursday night after Doug Lewis, Canada's transportation minister, agreed to investigate the issues raised by the truckers.

The strike affected General Motors' plants in Oshawa and Scarborough, Ontario, and St. Therese, Quebec; Ford Motor Co's Oakville and St. Thomas, Ontario, assembly plants; and Chrysler Corp's Windsor and Pillette Road plants in Windsor.

The companies did not adjust last week's estimates to show production lost because of the blockade. Before the blockade, they had scheduled production of 21,502 cars and 17,408 trucks.

PRODUCTION

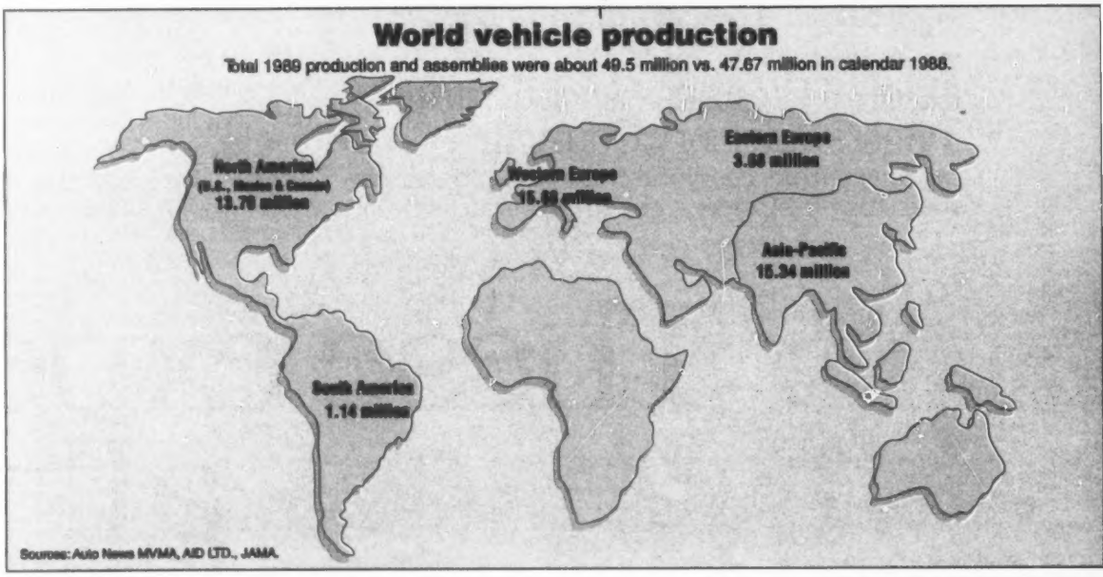
World vehicle production and assembly climbed by approximately 1.8 million units in calendar 1989.

Western Europe topped all other world regions. The eight West European countries turned out 15.68 million cars and trucks last year compared to 14.90 million in 1988. Cars alone were up some 670,000 units.

Asia-Pacific, including Japan, increased by 360,000 total units in 1989. Eastern Europe climbed an estimated 408,000 units. North America's car and truck total was up nearly 395,000 units.

Among individual nations, Poland quadrupled its vehicle production in 1989, mainly due to trucks. Mexico's car and truck total climbed by nearly 24.60 percent in calendar 1989. Spain's total rose by 8.43 percent, France's by nearly six points.

Japan (13,025,678 units), and the United States (11,124,945 units), were the world's top car producers in 1989. They were followed by West Germany, France, Italy and Spain, each with more than two million units.



Annual world vehicle production and assembly — 15 countries; 40 years

SALES/REGISTRATIONS

Calendar 1989 was a year of incentive wars, a year of accelerated Japanese car sales in the United States — Honda Accord was the No. 1 seller — and a year when light trucks, particularly minivans, stole market share from automobiles.

Although total U.S. truck sales again passed the five-million mark, light-truck sales slipped to 4,680,335 from the previous year's record 4,872,896.

Car sales slumped even worse. Including Japanese transplants, U.S. automakers sold 7,075,042 cars in 1989, down from 7,526,334 in 1988. Import cars fell to 2,792,372 from 3,064,773 in 1988.

In North America, the United States and Canada compiled combined new-car registrations of 10,827,148 in 1989 — 695,910 or 6.04 percent below 1988's 11,523,058.

In Western Europe, records were broken as new-car registrations soared beyond 13 million units.

Western Europe car registrations rise 3.63% in 1989

Western Europe kept their lead in worldwide passenger car registrations again in 1989. Figures in millions

SALES/REGISTRATIONS

New-car registrations in the United States declined 627,314 units to 9,852,617 in 1989. That was 6.00 percent below 1988's 10,479,931 units, third-highest count in the past decade.

Registrations of U.S.-built cars in 1989 slumped to 6,313,174, trailing 1988 by 457,079 units or 6.75 percent. The 1988 total was 6,770,253.

Import-car registrations dropped 170,435 units or 4.60 percent, but captured 35.92 percent of 1989's total U.S. car market.

In 1989, Big 3 captive imports' share of new-car registrations slipped by 35,589 units or 8.02 percent. Captive imports accounted for a slightly lower 11.54 percent share of import-car registrations. Other imports declined by 134,846 units or 4.13 percent to 3,131,061 in 1989.

NOTE: Totals from 1969-1980 include Brockway and Diamond Reo registrations — not shown here.
SOURCE: R.L. Polk & Co.

* Numbers up to 1983 reflect White Motor as an independent operator. From 1984 through 1987, they reflect combined Volvo White operations. From 1988 on, they reflect Volvo GM heavy trucks as a new joint venture operation in Class 8.
① Dodge included in Chrysler Corp. totals in 1983. 1986 Dodge and Plymouth totals are broken out in 1987 and 1988.
② Freightliner included in White totals until 1970, included in Daimler-Benz beginning in 1983.
③ Kenworth, Peterbilt included in Paccar totals beginning in 1983.

1990-model passenger car specifications

New-car specifications are compiled by Automotive News from information supplied by automakers, car divisions, vehicle importers, the Motor Vehicle Manufacturers Association and other sources. Base models are listed. Upgraded-trim versions with no changes in engines or dimensions are not listed.

Engine classifications are: I — inline; V — V-shaped block; H — horizontally opposed; R — rotary.

Carburetion classifications are: 2V — two-barrel carburetor; 4V — four-barrel carburetor; FI — electronic fuel injection; MFI — multipoint fuel injection; TBI — throttle-body fuel injection; SFI — sequential fuel injection.

Drive system classifications are: F — front-wheel drive; R — rear-wheel drive; 4wd — four-wheel drive.

New-car dimensions and capacities are explained at the top of the chart. Every reasonable precaution has been taken to insure accuracy, but Automotive News cannot assume any liability by reason of inaccuracies or omissions. Specifications are subject to change without notice.

1990-model domestic car body family designations

Chrysler Corp led the way in platform (body family) revisions among Big 3 domestic automakers in the 1990 model year.

General Motors changed some models within platform groupings, but added no new platform designation in the 1990 model year. Ford Motor Co stood pat on the 1990 platform front.

Chrysler's 1990 platform actions began early in the 1989 calendar year when Plymouth Laser was launched. Following last fall were the 1990 Chrysler Imperial, Chrysler Fifth Avenue, Chrysler New Yorker Salon and Eagle Talon. Salon (base model New Yorker) became part of the C-body group.

The Chrysler LeBaron Sedan and Dodge Monaco came out later in the 1990 model year. Monaco joined Eagler Premier in the B-platform. LeBaron sedan became part of the A-platform with Plymouth Acclaim and Dodge Spirit.

It added up to two new platforms for the company: the Y-body — Chrysler Imperial and New Yorker Fifth Avenue; and H24S — Plymouth Laser and Eagle Talon.

A new GM model — Chevrolet Lumina — joined Pontiac Grand Prix, Oldsmobile Cutlass Supreme and Buick Regal in the mid-size W-platform in the 1990 model year. A Lumina coupe bowed in spring 1989; a six-passenger sedan followed last fall.

Another newcomer to the Chevrolet 1990 model lineup is the subcompact Geo Storm, designated the R-body. Geo Spectrum, formerly called an R-body, is discontinued.

The Chevrolet Celebrity four-door notchback was dropped from GM's family-size A-platform in 1990, but two Celebrity station wagon models are retained.

Also discarded from GM's lineup in 1990 were the B-body Pontiac Safari station wagon and J-body Buick Skyhawk.

Retail prices, 1990 U.S. and import cars

This table shows the prices of 1990 domestic and imported cars as of May 7, 1990. All prices are manufacturers' suggested retail prices. Import prices include ocean freight and U.S. import duty. None of the prices include destination charges, state and local taxes, optional equipment or any charges that may be passed on to the buyer.

In the equipment section, "Std." means standard equipment; "N.A." means the item is not available on the model mentioned. On some models, the standard-equipment radio is a delete option. Some makes and models are omitted because 1990 prices had not been established when this table was prepared.

Retail prices, 1990 light trucks, domestic and import

These tables show the prices of domestic and imported light trucks, sport-utility vehicles and vans as of May 7, 1990. Prices are manufacturers' suggested retail prices. Import prices include ocean freight and U.S. import duty. None of the vehicle prices include destination charges, state and local taxes, optional equipment or any charges that may be passed on to the retail buyer. Vehicle prices are for the base vehicle with the base engine. In the equipment section, "Std." means standard equipment; "N.A." means the item is not available on the model mentioned. On some models, the standard-equipment radio is a delete option.

OPTIONS/EQUIPMENT

Safety, comfort and convenience were prime motivators behind the growth of factory-installed equipment in the 1989 model year.

Newer safety features attracted attention. Airbags went into nearly 7 percent of U.S.-built cars. Anti-lock braking systems gained nearly two percentage points.

Convenience equipment such as power seats and electronic instrument panels continued to gain favor, while power brakes and power steering have become virtually standard.

Air conditioning was installed in better than 88 percent of U.S.-built cars.

Factory-installed stereo sound systems continued to attract interest. Nearly 90 percent of U.S.-made cars were equipped with stereo AM/FM radios. More than 50 percent had stereo cassette decks.

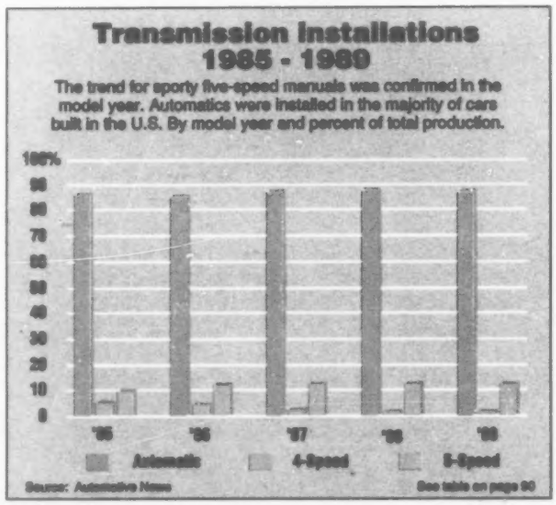
More cars were fitted with luxury leather seats. Convertible-styled roofs continued to gain popularity.

Among body styles, four-door sedans continued to dominate the market.

Interest in underhood power expanded. Although 4-cylinder engines went into nearly 44 percent of cars produced in the U.S., there were gains in the 6-cylinder segment and in turbocharged engines.

The majority of new-car buyers favored four-speed automatic transmissions, although sporty five-speeds retained a small but faithful following.

For the second year, the Automotive News Market Data Book includes statistics on imported cars sold in the United States. Installation rates for imports begin on page 101.



Transmission installations
1985 - 1989
The trend for sporty five-speed manuals was confirmed in the model year. Automatics were installed in the majority of cars built in the U.S. By model year and percent of total production.

ABS, Turbocharger and Fuel-injection installations
Anti-lock braking system and turbocharger installations garnered a growing corner of model year car production. The majority of U.S.-made cars were single or multi-point fuel-injected. By model year and percent of total production.

Roof options 1989
Vinyl roof installations shrank again in the 1989 model year, while convertible roofs gained a point in a small but popular market.
Vinyl 4.50%
Electric slide 3.05%
Pop-up sun roof 1.86%
T- roof 1.29%
Convertibles 2.28%
Standard 87.02%
Total Options 12.98%

PRODUCT PROFILES

In the following pages you will find profiles of the world's vehicle builders and their products sold in the United States.

Our editors combed financial reviews, manufacturers' reports and the pages of *Automotive News* to provide you with handy, useful information. Photos, specifications and sales data accompany information on each manufacturer and importing entity. Reports of recent significant events are included.

We've covered importing organizations, 32 manufacturing companies, a dozen car-building divisions and are giving you a look at close to 250 of the vehicles they sell.

ALFA ROMEO

Darrell L. Davis, president
Alfa Romeo Distributors of North America
8259 Exchange Drive
Box 598026
Orlando, FL 32859-8026

	1989	1988
U.S. car sales	2,912	4,476
Car share (%)	0.03	0.04

Alfa Romeo, Milan, Italy, is one of the oldest names in the industry and specializes in high-powered, small cars or sporting roadsters. Alfa products have survived in a niche that has seen the fading of grand names like MG and Triumph. The U.S. marketing arm is Alfa Romeo Distributors of North America, a joint venture of Fiat Auto SpA, Alfa Romeo's parent in Turin, and Chrysler Corp., Highland Park, Mich.

SPIDER

	1989	1988
Car sales	1,842	2,148

Spider has maintained virtually same look since 1966 introduction as Duetto, designed by Battista Pininfarina, Italian coach builder. Spider was given more power in 1990. In June, the 164 bows as a 1991 model.

ASTON MARTIN

M.V. Gauntlett, chairman
Aston Martin Lagonda of North America
180 Harvard Ave.
Stamford, CT 06902

	1989	1988
U.S. car sales	34	65
Car share (%)	0.00	0.00

Aston Martin Lagonda of North America, Stamford, Conn., importer of Aston Martin and Lagonda cars, is a subsidiary of 75-year-old Aston Martin Lagonda Ltd., Newport Pagnell, England, which Ford Motor Co. acquired in 1987.

Cars are characterized by hand-built quality and high performance. Lagonda is a luxury sedan which can date its pedigree back to the turn of the century. The roomy sedan is built at the rate of one per week by hand in Newport Pagnell, Buckinghamshire, England. No 1990 Lagondas will be imported, but car will return, maker says.

VIRAGE

	1989	1988
Car sales	34	65

Virage is a British 4-seater with hand-formed aluminum body, 155 mph top speed. Aluminum 32-valve V-8 was developed with Calloway Engineering, Old Lyme, Conn., Chevrolet Corvette converter.

BMW

Gunter Kramer, chairman
Karl Gerlingen, president and CEO
BMW of North America Inc.
300 Chestnut Ridge Rd.
Woodcliff Lake, NJ 07675.

	1989	1988
U.S. car sales	64,881	73,359
Car share (%)	0.66	0.69

BMW of North America (1975) is a subsidiary of BMW AG, Munich, West Germany. BMWs, built at six sites in Germany and Austria, by Bayerische Motoren Werke AG, have a strong reputation as high-performance road cars built in the tradition of German engineering.

BMW is considered an aggressive competitor in what may be the most dynamic part of the American car market, the luxury/performance segment. For 1991 there are three new models, V-12-powered 850i coupe, the M5, a hand-built sports sedan and the 318i, a 4-cylinder, entry level sports sedan.

3-SERIES

	1989	1988
Car sales	31,174	36,671

The compact 3-Series, introduced with the 320i in 1977, comes as seven models including a convertible and one with all-wheel drive. A new 318i, entry-level 4-cylinder sports sedan goes on sale this summer as 1991.

PRODUCT PROFILES

CHRYSLER CORP.

L.A. Iacocca, chairman
Gerald Greenwald, vice chairman
Chrysler Corp.
12000 Chrysler Dr.
Highland Park, MI 48288-1919

	1989	1988
U.S. car sales	1,019,693	1,191,294
U.S. light truck sales	984,354	1,016,763
Car share (%)	10.33	11.25
Truck share (%)	21.03	20.87

Walter P. Chrysler, former GM executive, founded Chrysler Corp. in 1925. By 1927, the automaker had rocketed from 27th to fourth in the industry.

In April, 1987, Chrysler bought American Motors Corp., fourth largest U.S.-based car maker, which gave it four assembly plants, nine parts plants and 1,600 dealers. Under that pact, Chrysler and Renault have continued an AMC program to import and make cars with the Eagle badge.

Today, Chrysler has ties with Mitsubishi Motors of Japan - but sold an equity interest early in 1990. It owns Italian exotic car maker, Lamborghini, has a stake in Maserati of Italy and a venture with Fiat of Italy to sell Alfa Romeo cars.

Chrysler with Renault soon will produce a mini-sport utility vehicle codenamed JJ. Hyundai Motor of Korea will supply Chrysler with mid-sized sedans beginning in 1991.

CHRYSLER-PLYMOUTH

Michael V. Howe, general manager
Chrysler-Plymouth Division
Chrysler Corp.
12000 Chrysler Dr.
Highland Park, MI 48288-1919

	1989	1988
Car sales	502,286	616,989
(Chrysler)	196,125	279,127
(Plymouth)	306,161	337,862
Car share (%)	5.09	5.83
(Chrysler)	1.99	2.64
(Plymouth)	3.10	3.19

Chrysler-Plymouth Division of Chrysler Corp. dates to 1928 when the company launched Plymouth and DeSoto cars. During the same year it purchased Dodge Brothers Inc., at the time the industry's third largest company. Then, as now, trucks were important to Dodge and enjoyed a strong reputation for durability.

IMPERIAL

	1989	1988
Car sales	2,226	0

The name Imperial has been on and off Chrysler cars for generations. It returned in the 1990 model year as a front-drive standard-sized car made in Belvidere, Ill. and targeted for the older American traditional buyer.

Sales rank
58 of 72 intermediates

Ferrari North America
777 Terrace Ave.
Hasbrouck Heights, NJ 07604

	1989	1988
U.S. car sales	805	1,054
Car share (%)	0.00	0.01

Bearing the badge of the prancing horse, Ferrari cars are built by Ferrari SpA, Modena, Italy, with engines coming from Maranello. Cars bear the stamp of Enzo Ferrari, race driver-entrepreneur, who died in 1988. The first true Ferrari was a race car, the 125 built in 1947, and that successful V-12 effort was followed by a steady stream of racers. Strong, slick Ferraris formed the backbone of a breed of cars that became known in the post World War II period as "the supercars." Victories in Formula One racing focused attention on Ferrari. Joining the stable in the 1990 model year is a 2-seater Ferrari 348 TB with a 3.4-liter 32-valve V-8, 300 hp engine that is longitudinally mounted.

TESTAROSSA

	1989	1988
Car sales	NA	NA

The 180 mph Ferrari Testarossa (Redhead) is engineered for high-performance and "from its inception has been the very embodiment of the Ferrari spirit." The 12-cylinder, 48-valve engine generates 380 hp.

Truck share (%)	29.95	30.00

Ford Motor Co., was founded by Henry Ford whose first car ran June 4, 1896. The great inventor and entrepreneurial genius built the business from a one-man operation in a Detroit shed into a broadly held worldwide company selling millions of cars a year. "The car that put the world on wheels," the Model T was launched in 1908; 15 million were built.

In March, Ford bought Jaguar plc, the holding company for Jaguar Cars Ltd., for $2.5 billion and said that move "gives Ford a new presence in the world's premium-car market."

FORD DIV.

Thomas J. Wagner, vp and general manager
Ford Division
Ford Motor Co.

Car share (%)	34.83	36.09
Truck share (%)	35.66	34.67

General Motors, formed in 1908 in Flint, Mich., has 240 operations in 142 U.S. cities including 30 assembly plants. GM also has plants in Canada and Mexico, and assembly, manufacturing or distribution sites in 35 other countries.

In 1984, GM reorganized vehicle operations into Buick-Oldsmobile-Cadillac and Chevrolet-Pontiac-GM of Canada groups, based in Warren, Mich., and the Truck & Bus Group, Pontiac, Mich. Automotive profits in 1989 were lower than in 1988 because of lower volume and higher sales incentives reflecting tough competition.

BUICK

American Honda Motor Co.is a 31-year-old subsidiary of Honda Motor Co. Ltd., Tokyo, which was founded in 1948 and went into car production in 1962. Motorcycles established reputation for quality which was replicated quickly in car and truck field. Production by Honda of America Manufacturing began in Marysville, Ohio, in 1982 and capacity of 150,000 Accords a year reached in 1984. Civic assembly started in 1989 at the plant in East Liberty, Ohio. Plant capacity is 150,000 units. Production in Canada started in 1986.

ACCORD

	1989	1988
Car sales	362,707	362,673

Accord, built in Marysville, Ohio, and Sayama, Japan, went into production in 1977, and is all new for 1990. Sold as coupe or sedan, Accord, the number one car sold in America in 1989, has new overhead cam, multiport, 16-valve engine.

American Isuzu Motors imports vehicles produced by Isuzu Motors Ltd. of Tokyo. Parent dates to a 1918 start in autos when forerunner, Tokyo Ishikawajima Shipbuilding & Engineering, produced a 5 hp Wolseley A9 under license from Wolseley-Siddeley in Birmingham, England. In the '50s, under a licensing agreement, Isuzu built British Hillman cars. GM acquired 34.2 percent of Isuzu shares and from 1972 to 1979 imported Luv pickups and cars under the Opel name. In late 1989, Subaru-Isuzu Automotive Inc., Lafayette, Ind., began building Subaru Legacy sedans, wagons and Isuzu pickups and Amigos.

Jaguar Cars Ltd., Coventry, England, has been selling powerful luxury autos in this country for over 50 years. In the first year, shipments to the United States were only a fraction of total build - 889 out of 14,272 cars. Today, the U.S. is Jaguar's biggest overseas market and is served by subsidiary, Jaguar Cars Inc. There are 140 U.S. dealers and most sales are in California, Florida and the three state area around New York. On Mar. 1, 1990, Ford Motor Co. bought Jaguar Plc, Jaguar's holding company, for $2.5 billion to give Ford "a new presence in the world's premium-car market."

XJ6

MAZDA CORP.

Chairman: Keiji Asano.
President: Yoshinori Taura.
Mazda Motor of America Inc.
7755 Irvine Center Dr.
Irvine, CA 92718.

	1989	1988
U.S. car sales	263,378	256,050
U.S. light truck sales	78,539	93,287
Car share (%)	2.67	2.42
Truck share (%)	1.68	1.91

Mazda Motor of America is the importing arm of Mazda Motor Corp., Hiroshima, Japan. As Toyo Kogyo Co., the company started building vehicles with 3-wheel trucks in 1931. Ford Motor Co. acquired 25 percent interest in 1979, the year the carmaker assembled its 10 millionth unit and production hit rate of one million vehicles a year. Ford dealers sold Ford Courier, a small pickup built by Mazda, until Ford-built Ranger trucks reached the market. In 1984, the carmaker changed its corporate name to Mazda. Mazda began building cars at Mazda Motor Manufacturing (U.S.A) plant in Flat Rock, Mich., in 1987. Ford shares production of Probes at joint-venture Flat Rock.

MERCEDES-BENZ

Werner Kniefer, chairman
Erich Krampe, president
Mercedes-Benz of North America
One Mercedes Drive
Montvale, N.J. 07645

	1989	1988
U.S. car sales	75,714	83,627
Car share (%)	0.77	0.79

German Carl Benz built the first workable car, a 3-wheeler, in 1885. A year later, Gottlieb Daimler built a 4-wheel car and the industry was born. Mercedes-Benz, all rear- or 4-wheel drive, reflect tradition, German engineering and craftsmanship. Japanese luxury competition forced them to trim model-count in 1989, but Mercedes remains a target for upper scale Japanese car lines. Cars often appreciate or retain their value. The North American operation is a subsidiary of Mercedes-Benz, Stuttgart, West Germany, which is part of Daimler-Benz A.G., Stuttgart, a holding company.

190E 2.6

	1989	1988
Car sales	14,503	16,740

190E, is "the baby Benz," but the Bremen-made car has all the amenities of larger sedans. Introduced in 1984, the 190 was, until this year, one of the few cars offered here with diesel power.

Mitsubishi Motor Sales of America has been the distribution arm in this country for Mitsubishi Motors Corp., Tokyo since 1981. The parent automaker traces its roots to 1917 and the Model A, Japan's first series-production car. Since 1971, Mitubishi has provided cars, trucks and engines to Chrysler Corp. in the United States. The Japanese giant is a Chrysler partner in Diamond-Star Motors Corp., building cars in Normal, Ill. The Mitsubishi 3000GT high-tech sports coupe will be a 1991 model. Talks with Daimler-Benz of West Germany in 1990 may lead to joint production of vehicles in Europe.

ECLIPSE

Nissan Motor Corp. in U.S.A., was set up by Nissan Motor Co. Ltd. 32 years ago to market cars and trucks in the United States. In 1985, the Japanese automaker opened Nissan Motor Manufacturing Corp. U.S.A., in Smyrna, Tenn. to assemble pickup trucks and Sentra cars and trucks. A second car line is expected to be added in 1992.

Nissan (once known as Datsun) vehicles have been built since 1933, when Yokohama company changed its name from Jidosha Seizo Co. A merger in 1966 with Prince Motors Ltd. made Nissan, Japan's largest auto maker. In Japan, the company makes cars, buses, trucks, industrial engines, boats, textile machinery and high-lows.

MAXIMA

	1989	1988
Car sales	109,429	74,451

Front-drive, 5-passenger Maxima, the company's flagship, was restyled in the 1989 model year. For 1990, there's a wider selection of colors, an upgraded stereo system and new interior cloth.

Peugeot Motors of America first imported cars made by Automobiles Peugeot S.A., Paris, in 1958. The parent French firm was started as a textiles business in 1810. Later, the Peugeot brothers invented the cold-roll steel process. Known as a premier bicycle maker since 1885, the French firm built its first steam car in 1889 and produced the first gasoline car the same year. In 1894, Peugeot made and sold the world's first station wagon. Peugeot installed diesel engines in its vehicles in 1922 and remains an industry leader in diesel power. In 1978, the French firm acquired Chrysler Corp.'s European operations.

405

	1989	1988
Car sales	NA	NA

The 405 line of front-drive cars, new in 1989, has been expanded for 1990 with the Sportswagon. The wagon was designed by Pininfarina Studie & Ricercha, Turin, Italy, built in Sochaux, France.

German designer and inventor Ferdinand Porsche showed a car bearing his name in 1900, an electric. While he was designing Volkswagen in the late 1930s, his son Ferry Porsche was making a name too. Porsche 911 was designed by Ferry Porsche. The German company has never built a sedan, only sports cars, and Ferry Porsche has always claimed he was in the entertainment rather than transportation business. Volkswagen and Audi have ties with Porsche extending back to the 1930s. The Porsche 914, for example, was a car often considered a VW rather than atrue Porsche because of its VW components.

RANGE ROVER

Charles Hughes, president
Range Rover of North America Inc.
4390 Parliament Place
P.O. Box 1503
Lanham, MD 20706

	1989	1988
U.S. truck sales	4,822	3,427
Truck share (%)	0.10	0.07

Although Range Rovers have been imported here only since 1986 by the U.S. marketing arm, the car goes back to 1906. After World War II, Land Rover, built in Solihull, England, was introduced and quickly became a benchmark around the world for durability. Range Rover was developed from a perceived need for a refined version and was introduced in 1970. It debuted in the U.S. market in 1987 and first-year sales were 10 percent ahead of projections. Improvements have included: a sun roof, more powerful engine, viscous-coupled transfer case for 4wd, better tires and wheels, beefed up rust-proofing and ABS.

RANGE ROVER

	1989	1988
Truck sales	4,822	3,427

The rugged Range Rover from England has a steel ladder frame, steel and aluminum body and an aluminum V-8 with Bosch multipoint injection. Maker says Rover is the only 4wd utility with ABS as standard.

Rolls-Royce Motor Cars Inc., Lyndhurst, N.J., is the importer of Rolls-Royce and Bentley cars that have been made by Rolls-Royce Motor Cars Ltd., Crewe, England, since 1906. In 1931, the Bentley company was acquired by Rolls. Over the years, Rolls-Royce became a world leader in luxury cars, automotive product publicity and aviation. In 1971, the aviation segment had financial problems and automotive part went public in 1973. In 1980, Rolls-Royce merged with what is now Vickersplc, British engineering company.

SILVER SPIRIT II

	1989	1988
Car sales	NA	NA

Introduced in 1980, the Silver Spirit made in Mulliner Park Ward has an aluminum V-8 and for 1990, an independent suspension with automatic levelling, two separate brake systems with ABS.

Car share (%)	0.32	0.36

Saab-Scania of America, has imported Saab-Scania cars and trucks here since the 50's. The Nykoping, Sweden based supplier to the Swedish military has been building cars since 1949, when front-drive Saab 92 debuted. Sold in this country since 1957, front-drive Saabs are known for aircraft-based construction and durability. The company emphasizes safety. Late in 1989, GM and Saab created a venture to take over Saab Car Division, but said it won't affect Saab operations in the U.S., Saab's largest market for cars.

900

Toyotas are marketed by Toyota Motor Sales U.S.A., subsidiary of Toyota Motor Corp., Toyota City, Japan. Vehicle production in Japan dates to 1933, when an automotive division was set up by Toyoda Automatic Loom Works, Toyoda City. An experimental car and truck ran in 1935. Toyota Motor was formed in 1937; its millionth car assembled in 1962, 60-millionth in 1988. In 1984, a venture with GM, New United Motor Manufacturing (builds Corolla, Geo Prizm), was formed at Fremont, Calif. Ground was broken in 1988 for two plants in Georgetown, Ky., (Camry) and Cambridge, Ontario (Corolla).

CAMRY

	1989	1988
Car sales	257,466	227,140

Output of Camry, the best-selling Toyota, began in 1989 at Toyota Motor Manufacturing plant in Georgetown, Ky., where capacity will be 200,000 units a year. All-Trac all-wheel drive, ABS, V-6 are available.

LEXUS

J. Davis Illingworth, vice president and general manager
K. Usuda, senior vice president

Lexus Division
Toyota Motor Sales U.S.A. Inc.
19001 S. Western Ave.
Torrance, CA 90509

	1989	1988
Car sales	16,302	0
Car share (%)	0.16	0.00

Lexus division introduced two built-in Japan sedans in the fall of 1989. Arrival of the cars put a Japanese maker for the first time in the luxury market to compete with Mercedes-Benz, BMW, Jaguar, Cadillac, Lincoln — cars that 58 percent of Lexus buyers owned. It also put Toyota head-to-head with Nissan and upscale Infiniti line.

ES 250

	1989	1988
Car sales	4,728	0

Lexus ES 250 debuted in the fall of last year and immediately became an industry benchmark. Assembled in Toyota City, Japan, the sedan has V-6 engine. Standard transmission is a 5-speed.

VOLKSWAGEN

Hans-Jorg Hungerland, president & CEO
Volkswagen of America Inc.
888 W. Big Beaver Rd.
Troy, MI 48099

	1989	1988
U.S. car sales	154,933	191,741
Car share (%)	1.57	1.81

Volkswagen dates to the 1930s when engineer Ferdinand Porsche designed a small car with the backing of Adolf Hitler after being turned down by manufacturers. Hitler tied in a road-building campaign and put Germany on wheels. The VW Wolfsburg plant, liberated by the British, became an army truck repair center. Workers found and assembled parts into two cars. By the end of 1945, VW had built 1,785 VW Beetles. The bug revolutionized transportation as the Ford Model T had. VW is a world class carmaker with plants onfive continents.

CABRIOLET

	1989	1988
Car sales	9,891	12,791

Cabriolet, assembled by Wilhelm Karmann, Osnabrueck, West Germany, in 1990 gets driver bag, power windows and a higher-output engine. Top has three layers of sound, thermal insulation.

VOLVO

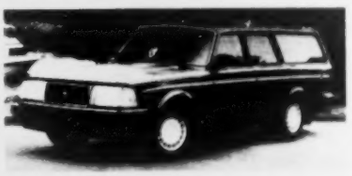
Pehr G. Gyllenhammar, chairman;
Bjorn Ahlstrom, president
Volvo North America Corp.
535 Madison Ave.
New York, N.Y. 10022

	1989	1988
U.S. car sales	102,620	98,497
Car share (%)	1.04	0.93

Volvo Cars of North America has imported Volvos to the United States for 35 years. It is a subsidiary of Volvo AB, Gothenburg, Sweden, which sells about 400,000 cars worldwide annually. Volvos enjoy solid - if not spectacular - sales in this country of around 100,000 units per year and the vehicles have a reputation of being well-engineered. In the late 1980s, Volvos were called Yuppie car but the company says, "Volvo builds rational cars for families who value longevity, safety and value for the money."

240

	1989	1988
Car sales	40,881	39,597



The 240 series accounts for about 40 percent of sales. Introduced in 1975, turbocharged in 1981. In 1990 there's a entry level 240 and DL. The line is built in Ghent, Belgium, Torslanea, Sweden and Halifax, Nova Scotia.

YUGO

John Speich, president
Yugo America Inc.
28 Park Way
Upper Saddle River, N.J. 07458

	1989	1988
U.S. car sales	10,576	31,545
Car share (%)	0.11	0.30

U.S. bankruptcy court late last year approved Yugo America Inc.'s reorganization plan and it emerged from Chapter 11 as a fully owned subsidiary of the Yugoslavian manufacturer, Zastava. Until then, Yugo America, a car importer since August, 1985, had been a subsidiary of Global Motors Inc., Upper Saddle River, N.J. Zastava, based in Kragujevac, is a 136-year-old diversified conglomerate producer of cars, trucks, defense systems, sporting arms and machine tools. Since first making cars in 1953, Zastava has built about 3.5 million units, exporting some 500,000 to 68 countries.

CABRIO

DEALERS

The hottest-selling U.S. dealers of 1989

Ford franchise overtakes Chevrolet franchise for the top spot

The 1989 Automotive News list of America's largest auto dealers — the ranking of top-producing dealerships for the respective domestic and imported franchises — includes a number of large familiar operations which have been big for a long time, as well as some newcomers.

The ranking is based on total new-unit deliveries — car and truck, fleet and retail — for calendar 1989.

As in years past, many of the top-selling franchises used high-volume fleet sales operations to account for the majority of their business. This was particularly true among the traditional domestic makes preferred by many fleet customers.

However, the Penske organization's Longo Toyota dealership in El Monte, Calif., relied on 15,893 one-at-a-time retail sales as well as a newly-developed fleet sales business to push it into the ranks of the sales leaders.

The highest-volume individual franchise in the United States last year was Jordan Ford in, Mishawaka, Ind. Jordan passed Ed Morse Chevrolet of Lauderhill, Fla., which had held the top spot for two consecutive years.

Jordan Ford, which has been in business for 41 years, also ranked as the biggest dealership in total dollar sales, posting $560.5 million in sales last year. The dealership processed 42,013 fleet sales, retailed another 5,639 units for a total of 47,652. The dealership reported $4.4 million in parts and service business and 1,372 retail used-vehicle sales.

Jordan's rise to the top spot was gradual. In 1987, the three top-selling franchises were all Chevrolet. In 1988, Jordan moved into the No. 2 spot. Not surprisingly, Jordan Ford led the fleet sales, total new-unit sales and largest dollar volume lists.

Although Ed Morse Chevrolet slipped from the No. 1 spot last year, the franchise still reported 34,769 fleet sales as well as 2,720 retail deliveries for a new-unit total of 37,489 cars and trucks. The dealership finished fourth in total dollar sales, with 1989 revenues of $403.5 million.

The dealership that moved into second place in total dollar sales was Prospect Motors in Jackson, Calif. Dealer W.E. "Bill" Halvorson again placed among the top ten franchises for three of the General Motors makes he sells at the dealership: Chevrolet, Pontiac and Cadillac. In addition, Halvorson also has a Chrysler-Plymouth/Dodge/Jeep-Eagle dealership which is also on the list.

Luke Potter Dodge in Winter Park, Fla., another strong fleet dealer, finished 1989 in third place in the top-dollar sales category, with net revenues of $411.8 million.

The No. 1 dealer in used-vehicle sales was Ricart Ford in Columbus, Ind. Ricart was also the No. 2 franchise in new retail sales, with 11,344 deliveries in 1989.

The dealership that reported the most parts and service business last year was Lustine Chevrolet in Hyattsville, Md. Lustine reported parts and service business totaling $39.4 million. No. 2 was Friendly Chevrolet in Dallas, Texas, while the third spot went to Longo Toyota with $21.3 million in parts and service sales.

Overall, this year's listing — the fourth annual — is very similar to the earlier compilations, although some of the top-selling franchises have changed owners, some have faded and a few have slid into bankruptcy. Many of the traditional leaders are still at the top of their makes. For 1989, 17 of the franchise top performers for their respective domestic and imported makes were repeaters from 1988.

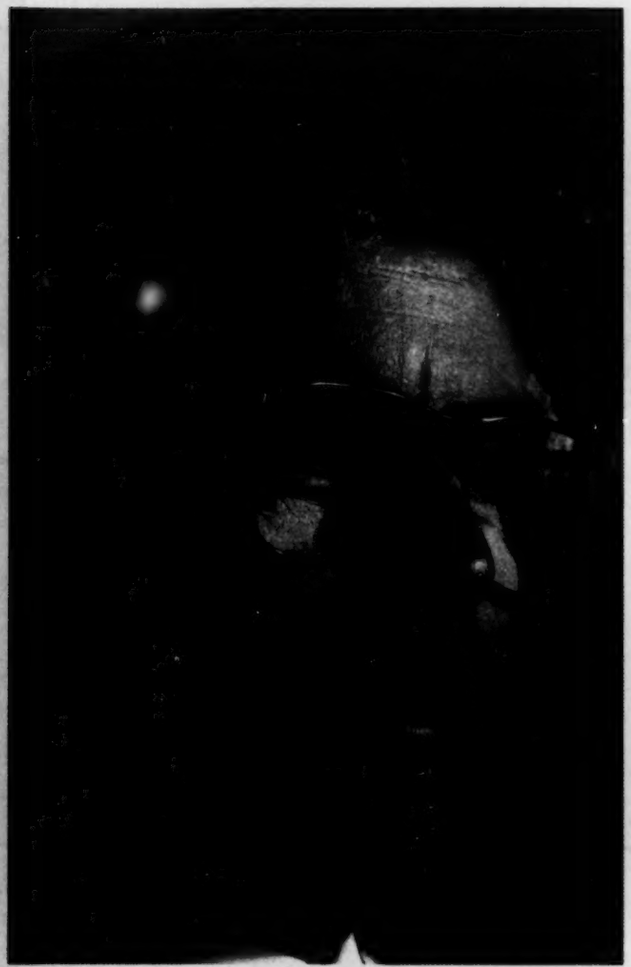
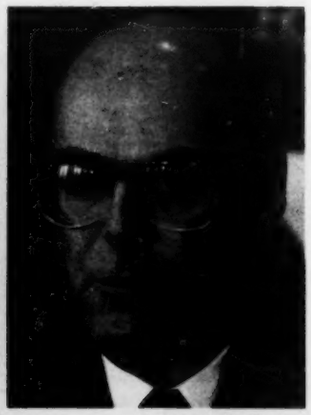
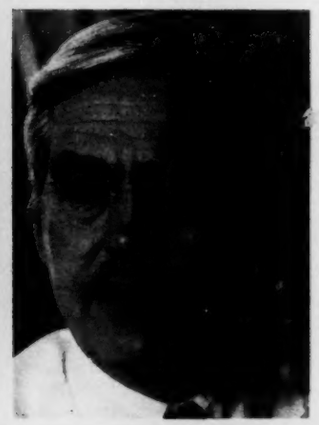
Greenwald gone, Iacocca may keep job





AUTOMOTIVE NEWS/JOE WILSDON

After Vice Chairman Gerald Greenwald, left, quit Chrysler last week, his duties were split between Chief Financial Officer Robert S. "Steve" Miller Jr., above, and President Robert Lutz, below.



Chrysler jolted as heir quits

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Gerald Greenwald's stunning decision to vacate the fifth floor of Chrysler Corp.'s headquarters may keep Chairman Lee Iacocca at the company's helm beyond 1991.

Iacocca, who turns 66 in October, now leads a troubled company that has no anointed successor to take over when his contract expires at the end of 1991.

Given Iacocca's age and the company's declining circumstances, there is little margin for error in lining up the team that will carry Chrysler into the 21st century.

It was not clear last week who will be the lead player in the new succession drama.

Vice Chairman Greenwald, 54, resigned to lead a proposed buyout of the United Airlines parent, UAL Corp., by airline unions. His eventual elevation to the Chrysler chairmanship had been undisputed by virtue of his sharing the Office of the Chairman with Iacocca.

One Chrysler executive had nicknamed Greenwald "the vacuum cleaner" for his awesome talent at cleaning up the details behind the swashbuckling Iacocca.

To quell rampant speculation about the company's future among company employees and Wall Street observers, Iacocca disbanded the Office of the Chairman and split up Greenwald's duties the day after Greenwald said he was leaving.

- Greenwald's title and some of his responsibilities went to Robert S. "Steve" Miller Jr., who had been executive vice president of finance and chief financial officer.

Miller takes over Greenwald's supervision of Chrysler Financial Corp., Chrysler Technologies and International Operations. He will continue to supervise all of Chrysler's financial activities.

- Robert Lutz, 58, president of Chrysler Motors, gets Greenwald's responsibility for Acustar Inc., Chrysler's parts manufacturing

Volvo, Renault seek truck savings

Mack, Volvo GM must grow closer in U.S., Zetterberg says

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

GOTHENBURG, Sweden — AB Volvo and Regie Nationale des Usines Renault S.A. will begin searching for ways to bring together their competing U.S. truck subsidiaries, Volvo GM Heavy Truck Corp. and Mack Trucks Inc.

With Mack losing money and Volvo GM out to improve its profits, new AB Volvo President Christer Zetterberg said in an interview that the two partners will have to find synergies in the United States.

So far, the impact of the Renault-Volvo link on Mack and Volvo GM has been unclear, with both U.S. parties denying the possibility of a merger or sharing of products and dealer bodies.

"I haven't a clear picture yet, but we have to look into this and see what can be done," said Zetterberg, who has been officially on the job for just over a month.

He said the new cross-ownership alliance between Renault and Volvo will have little or no affect on Volvo's U.S. car business.

"But on the truck side, we have to look into . . . our operation with Volvo WhiteGMC and the Mack operation, which is losing money presently," he said.

Volvo owns 76 percent of Volvo GM Heavy Truck Corp., and Renault Vehicules Industriels holds a controlling 44.6 percent stake in Mack.

Under the cross-equity partner-

Cost cuts will cushion bad 3rd quarter, Lutz says

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — If Chrysler Corp.'s cost-cutting plan were a ballgame, the company would be leading off third base. Chrysler Motors President Robert Lutz said the company is nearing its target of reducing costs $1 billion by year end.

But before then comes a rocky third quarter when Chrysler loses production of 60,000 minivans — one of the company's most profitable vehicles.

"We should have a decent second quarter," Lutz said in an interview conducted last week before Gerald Greenwald stepped down.

"Where people are underestimating our earnings power is that early on they weren't taking our $1 billion cost reduction program seriously. But this is real. We can now absorb quite a bit more in terms of marketing costs or even reduced revenue and still do better than break even."

But third-quarter earnings will tell a different story. "Third quarter is going to be a bath because we are not going to be shipping 60,000 minivans," he said. "There is no denying the third quarter is going to be a shock to us and somewhat surprising to the outside world. But that is the reality."

Chrysler will lose 60,000 units due to model changeover as the 1991 minivans are being restyled. The Windsor, Ontario, assembly plant will be down in July and St. Louis No. 2 will be down in August.

Lutz indicated Chrysler expects to reopen negotiations with the UAW to launch a three-crew, two-shift operation at the St. Louis No. 2 assembly plant. The change would allow

Capri leads L-M drive for small-car buyers

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

TEMPE, Ariz. — The introductions of the Tracer and the Capri this summer represent a crucial step in Lincoln-Mercury Division's campaign to draw small-car buyers into its showrooms.

Even L-M General Manager Ross Roberts admits that the division has not done well in attracting small-car buyers. The previous Mercury Tracer received a lukewarm reception when it arrived in 1987, and the German-built Merkur XR4Ti flopped and was dropped in 1989.

Selling safety:
In 1956, Ford Motor Co. tried to sell safety and flopped badly. But today, almost every manufacturer is touting the safety of its cars, and customers are starting to listen and buy. Page 3.

Dealers seek refund as service firms die

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

CONTRACT Casualties

New-car dealers in Washington state hope to recover an estimated $10.7 million in unearned premiums from the Washington Insurance Guaranty Association.

The imbroglio began two years ago when an insurance carrier went under, taking an extended service contract administrator down with it.

Northwest Underwriters Corp., a Seattle-based administrator of extended-service contracts, ceased operations in 1988. New-car dealers in five states had sold about 160,000 extended-service contracts administered by Northwest and insured by Consumers Indemnity Corp., also based in Seattle. The state insurance commissioner placed Consumers Indemnity in receivership in 1988.

More than 150 Washington dealers banded together, claiming the Washington Insurance Guaranty Association owed them the amount still remaining on the extended-service contracts they sold.

The association — made up of insurance companies operating in the state — protects consumers by paying claims for defunct insurers.

Although the guaranty association agrees dealers are owed money, a dispute followed on which of two complex formulas to use for the payout.

Dealers prevailed last October in a Washington Superior Court. But the guaranty association appealed the decision to the Washington Court of Appeals.

Dealers countered by asking the state Supreme Court to hear the case instead. The Supreme Court accepted the case last month but failed to set a trial date, according to Howard Sheridan, owner of Good Chevrolet in Renton, Wash.

Sheridan says some dealers stand to receive as much as $300,000. His dealership could recover about $90,000. "Losses at this dealership still amount to about $100,000, but that's better than losing $300,000," he says.

But Sheridan says another court hearing won't be necessary if dealers and the guaranty association can reach a settlement beforehand. The dealers want $10.7 million, down from estimated losses of $14 million, and the guaranty association has offered $9 million.

"Right now, we're only $1.7 million apart," Sheridan says.

For Washington auto dealers and others, the collapse of Consumers

CHANGING TASTES

Safety, once a pariah, gains favor in ads and with buyers

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

SELLING SAFETY

When John Livingstone brought home his new white 1988 Chrysler LeBaron convertible two years ago, his wife, Liz, saw the air bag mounted on its steering wheel and thought "big deal — it came with the car."

His daughter, Kim, then 16, gave the air bag a cursory glance, looked at the car and thought "cool."

The importance of the air bag did not really hit home for the Livingstones until last August.

That's when Kim Livingstone had an accident and the air bag coupled with the seat belt saved her life. The car was totaled, but Kim walked away without a scratch.

"You don't really appreciate it until you've been in an accident," says Kim, who graduated from high school last week. "When I buy a car, it will have an air bag."

Added Kim's mom: "We were so grateful we wanted to thank somebody. So my husband wrote a letter to Lee Iacocca."

The result was a series of Chrysler Corp. television commercials, many featuring survivors of crashes in Chrysler vehicles, all touting the importance of air bags in automobiles. One starred John Livingstone and his daughter Kim.

The commercials signal a new era of marketing that uses safety as a selling tool.

Until recently, most manufacturers believed that "safety doesn't sell."

It was a notion born in 1956 when Chevrolet, which was promoting racing, speed and performance, solidly outsold Ford, which was touting seat belts, padded interiors and impact-absorbing steering wheels. That year Chevrolet outregistered Ford 1,565,399 cars to 1,375,343.

With that memory etched deeply into their minds, most manufacturers, especially the Big 3, omitted safety features from their advertising and marketing campaigns. Instead, they focused on attributes such as styling, handling and performance.

But in the mid 1980s that began to change. Fueled by government standards that required all vehicles to meet certain safety standards, consumers began to demand safer vehicles.

Now, features such as anti-lock brakes, driver-side air bags and collapsible steering columns vie with luxurious leather seats, deluxe stereo systems and electronic

see SAFETY, page 24

Air bag kudos

DENVER — Air bags are proving a selling point for some Colorado dealers, while others say their popularity may balloon with more crash success stories.

Air bags, predicts Greg Youngstrom of Ralph Schomp Oldsmobile-Honda-BMW, Littleton, will become more common, "like anti-skid brakes."

There is "no question that air bags, in conjunction with three-point seat belts, are the best defense in a crash against serious injury and death," says John Conger, director of the Colorado Division of Highway Safety. About 2 percent of the cars in Colorado now have them.

The 1990 model year was the first year that federal regulators required passive restraints, meaning air bags or automatic seat belts, in every new car sold.

"We're going to be seeing . . . people not only surviving crashes, but surviving without any significant injury," says Chuck Hurley, a spokesman for the Insurance Institute for Highway Safety.

— The Associated Press

INFLUENCE: *Dealers find lobbying tough*

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — California auto dealer Byron Rose brought his 16-year-son to his first auto dealers' convention, but not for inauguration into the world of business expense account adventures.

Jason Rose, who could one day join the family Toyota business, got a hands-on lesson in working the political system. He tagged along for some good, old-fashioned lobbying — something the elder Rose realizes is necessary for any dealer who wants to stay in business.

Nine hundred other dealers who attended the three-day annual Washington conference of the American International Automobile Dealers Association apparently agreed. After being properly briefed by association leaders and hearing from congressional leaders, import executives and a political humorist or two, hundreds of dealers descended on Capitol Hill May 22.

Their inadvertent timing was perfect. The following day, the House of Representatives was scheduled to vote on the clean-air bill and an amendment that would mandate that one million alternative-fueled cars be sold in the nine smoggiest cities. San Diego, home of the Rose Toyota store, is one of those ozone-choked cities.

New Mercedes S-class line due in U.S. in '91

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

STUTTGART, West Germany — Mercedes-Benz AG will launch its new S-class model in the United States in the fall of 1991, less than a year after the sedan's debut at the Geneva show next March.

It will be only the first of several new models Mercedes will send to the United States during the next five years as it seeks to regain new-product momentum from arch-rival BMW AG.

"By 1995, we will have introduced a series of products and features beginning in the fall of 1991 with the new S class," said Eberhard Herzog, Mercedes-Benz management board member in charge of passenger-car sales.

Herzog confirmed that the S class will debut at Geneva, though he said it is not certain whether the V-12 600SEL flagship will be shown simultaneously. Other sources say the 6.0-liter, 400-horsepower 600SEL will bow later in the year.

HIDDEN IMAGE/HANS G. LEHMANN

The new S-class Mercedes is due in the United States in the fall of 1991. Known as the W140, it is larger than the current S-class.

The new S class should bolster Mercedes in the U.S. market, where sales have turned upward this year.

"We have approximately 52 percent of the high-luxury segment over $50,000 with our S class, and with the new S class in the 1992 model year, we are aiming at increasing this figure," said Herzog.

Mercedes' U.S. sales rose 4 percent to 24,030 through April after slipping 9 percent to 75,714 in 1989. Said Herzog: "We expect to keep within the planned sales volumes for this year — the same as last year in the face of very stiff competition."

Mercedes' sales peak in the United States was 99,314 in 1986. "I would not like to say that we will finally come back to 100,000," Herzog said.

Though the weak dollar is punishing European exporters, Herzog said Mercedes will not limit United

Ford dealers applaud power boost for '91, '92 cars

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. will respond to dealer requests for more power in its Ford Tempo and Mercury Topaz by offering a 3.0-liter V-6 engine in the 1992 model year.

Ford Division National Dealer Council members, who drove the cars, also were given an opportunity to drive several 1991 models. They included a 1991 Mustang with the twin-spark-plug, 2.3-liter four-cylinder engine; a Thunderbird equipped with a 5.0-liter V-8; and a Taurus equipped with a four-speed electronically controled automatic overdrive transmission.

Council members drove the cars at Ford's Dearborn, Mich., test track.

Mark Smith, president of the Ford National Dealer Council, called the V-6-powered Tempo "a smooth-running car with power." Smith owns Dick Smith Ford in Raytown, Mo.

> "There has been a lot of concern about Ford's powertrains, but last week made us feel better about what's on the horizon."
>
> **Mark Smith**
> Ford National Dealer Council president

About 50,000 V-6 engines will be produced for the 1992 Tempo/Topaz at Ford's Lima, Ohio, engine plant, sources say. Job One for the V-6 engine will be June 17, 1991.

Ford currently offers a 2.3-liter, four-cylinder engine in the Tempo and Topaz. The V-6 will help Ford compete more effectively against rivals already offering a V-6. For example, Toyota offers a 2.5-liter V-6 in its Camry; Chrysler offers a 3.0-liter V-6 in the Acclaim, Spirit and LeBaron; and Chevrolet offers a V-6 in the Corsica and Beretta.

Ford will offer the modular six-cylinder engine and the four-cylinder Zeta engine in the next-generation Tempo and Topaz (codenamed CDW27), which is due in the mid-1990s.

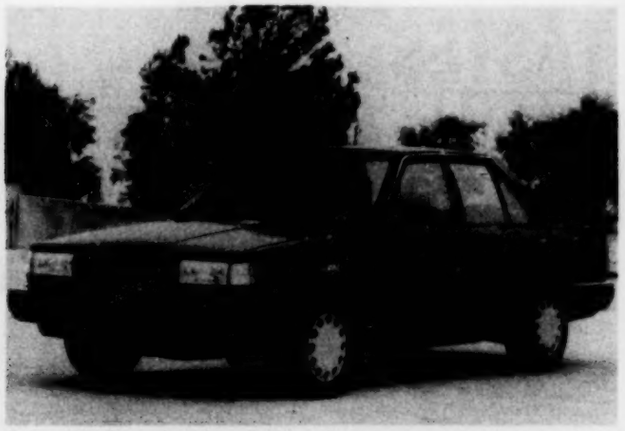
Smith said the twin-plug 2.3-liter Mustang "felt like a V-6, (and) dealers have felt that the Tempo needed a six-cylinder engine."

The Ford National Dealer Council also viewed the redesigned 1992 F-series pickup truck, which Smith said was met by widespread approval.

Some council members had expressed misgivings about the redesigned truck after seeing a photograph at this year's National Automobile Dealers Association convention in Las Vegas. Ford officials assured dealers at the convention that the photograph was not a good representation of the redesign.

Smith said a 1992 F-series truck was parked next to a Chevrolet C/K pickup at the Dearborn track so dealers could compare them.

"We feel that the (new) truck will be more than competitive with the C/K," Smith said.



Sales of the Sentra have been falling as the car nears the end of its product cycle, cutting into Nissan's profits in the United States. A new model is planned for 1991.

U.S. slow down limits Nissan profit growth

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Nissan Motor Co. reported record sales and record net income on an unconsolidated basis for the fiscal year ended March 31.

But low profits in the United States kept consolidated net income to a modest 1.2 percent increase.

The profit figure in the U.S. operation was "worse than mediocre" last year, close to break-even, said Executive Vice President Atsushi Muramatsu. "But we think last year was the bottom," he said.

Muramatsu would not give specific figures for the U.S. operation, but he said the low profit there affected the consolidated net profit for the fiscal year.

Unconsolidated net sales were up 11.9 percent to 4 trillion yen ($26.6 billion). Operating income was up 50.7 percent to 138 billion yen ($920 million), and net income rose 34.2 percent to 85 billion ($566.6 million).

The total consolidated net profit was 116 billion yen ($773.4 million), an increase of only 1.2 percent despite a 17.3 percent increase in sales to 5.645 trillion yen ($37.6 billion) and a 106.1 percent increase in operating income to 352 billion yen ($2.3 billion).

Muramatsu attributed the increase to strong Japanese sales and continued acceptance of Nissan's revised lineup.

Japanese sales were up 19.4 percent to 1.3 million units, but exports declined 9 percent to 987,614 — mostly because of decreased shipments to the United States. Nissan exported 354,000 units to the United States, a drop of 72,000 from the previous year.

Part of the export decline was due to an increase in production in the United States from 215,000 to 243,000. Muramatsu attributed some of the decline to the halt in Pathfinder shipments at the beginning of the year because of the customs dispute affecting Japanese utility vehicles.

Also, he said, the Sentra, Nissan's best-selling model, is at the end of its product cycle. With a new model coming out this year, sales should improve, he said.

Although net unconsolidated income set a record, profitability was affected by the high cost of trying to step up production to meet demand. Labor costs rose 50 billion yen ($333 million), Muramatsu said, largely due to heavy overtime and hiring of 4,000 part-time workers.

Nissan will have a much smaller increase in labor costs this year. Since April, according to Muramatsu, Nissan has decided to regulate overtime.

Last year, he said, there was a constant rush to meet demand. This year, although there will be no specific limit on overtime, the company will not issue any sudden requests for overtime, regardless of demand. Work hours will become steadier, he said.

Although demand in Japan is still high, Nissan indicated the work force is tired, and there is a limit to pushing overtime.

MITI maintains car export limits

Isuzu, Daihatsu denied increases despite surplus by other makers

By Mary Ann Maskery
and Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTERS

Japan has decided to maintain its limits on car exports to the United States for another year, even though most Japanese automakers have been shipping fewer cars than their quotas permit.

The decision from the Ministry of International Trade and Industry to keep the ceiling at 2.3 million units — and preserve each company's share of that total — will constrain small importers like Daihatsu America Inc. and American Isuzu Motors Inc. But for the larger Japanese importers, the restraints are becoming increasingly meaningless.

In most cases, new North American factories are more than offsetting export curbs set by the Japanese government.

Total exports of Japanese passenger cars to the United States for the last fiscal period, which ended March 31, dropped about 10 percent to 1,949,573 units, 350,000 below the ceiling.

In the 1989 calendar year, meanwhile, Japanese manufacturers added at least 330,000 units of car production capacity in North America and built more than one million vehicles.

Isuzu and Mazda Motor of America Inc. absorbed their quota in the fiscal year that ended March 31. But most companies were below quota.

E.F. "Fritz" Kern, who takes over as senior vice president and general manager of American Isuzu next week, said the company was disappointed by MITI's decision. But he said it was "understandable," given the trade tensions between the United States and Japan.

JAPANESE EXPORT ALLOCATIONS

	1989* shipments	'90 and '91 quotas**
Toyota	511,418	610,000
Nissan	354,107	532,000
Honda	409,500	423,000
Mazda	226,118	226,000
Mitsubishi	182,084	193,500
Isuzu	124,210	127,000
Fuji (Subaru)	95,920	107,000
Suzuki	54,192	64,500
Daihatsu	12,026	17,000
Totals	1,949,573	2,300,000

*Years begin April 1 and end March 31.
**Estimates
Source: Automotive News research; Japanese automakers

> "If MITI had redistributed the quota and the allocations from companies that did not meet their quotas, they stood the danger of sending out a message that there was an increase in the quota."
>
> **E.F. "Fritz" Kern**
> American Isuzu Motors Inc.

"If MITI had redistributed the quota and the allocations from companies that did not meet their quotas, they stood the danger of sending out a message that there was an increase in the quota," Kern said.

Isuzu is limited to 126,800 imports, but 70,000 of those cars are destined to go to General Motors as the Geo Storm.

At Daihatsu America Inc., Executive Vice President C.R. Brown blames the system for Daihatsu's limited sales in the United States. He believes a North American factory may be required to alleviate the problem, but he says he doesn't have enough product to build a dealer body that could absorb production from a new plant.

But even Mitsubishi Motor Sales of America Inc., which is enjoying a sales surge this year, isn't worried about a shortage of product.

"It really has no effect on us," said Dick Recchia, executive vice president.

He noted that production from the Diamond-Star Motors Corp. plant in Illinois is increasing, and Chrysler Corp. has announced it will take 50,000 fewer cars from Mitsubishi's import allocation.

American Honda Motor Co. Inc. now has the ability to produce 610,000 cars annually in the United States.

In combination with MITI's reported 1990 allotment of 423,000 cars, American Honda could theoretically deliver to its U.S. dealers this year about 250,000 more cars than they sold in 1989.

Toyota, another Japanese company that has been increasing sales and adding North American capacity, has about 290,000 units of leeway. Mazda also has distanced itself from the quotas with new North American assembly capacity.

Automotive News Staff Reporters Kristine Stiven Breese and Diana T. Kurylko contributed to this report.

Toyota contests $1.3 million award to dealers

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Toyota Motor Sales U.S.A. Inc. has asked a federal judge to set aside a $1.3 million jury award to a pair of former Rhode Island dealers who accused the company of fraudulently shorting their dealership on cars.

Stuart Forer and Thomas Goddard, former owners of Mirando Toyota Inc. in Cranston, R.I., filed the lawsuit in 1984 in U.S. District Court for Rhode Island.

They charged Toyota with violating the Rhode Island Dealer Act, using a vehicle allocation system that breaches the dealer agreement and failing to deliver cars promised to them for renovating their dealership.

But a jury last month dismissed accusations that Toyota violated the dealer act and its dealer agreement. The jury found the company guilty of only the lesser charge of reneging on a promise to provide extra cars if the dealers renovated their facility. The jury awarded the dealers $1.3 million.

James Brandenburg, attorney for the dealership, said problems between the dealers and Toyota first arose in the early 1980s.

Forer and Goddard sold the dealership in 1989.

Toyota officials say they are delighted with the outcome of the lawsuit because it shows the company complied with state laws.

Meanwhile, Brandenburg of Brandenburg, Kaveney & Lownsdale, based in St. Louis, has filed motions asking for a new trial on the first two charges and an increase in the jury award or a new trial on the charge of reneging on the promise of more vehicles.

TWO IN ONE: *Cost-conscious aftermarket groups merge shows into giant Vegas event*

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Three trade associations have united to sponsor Automotive Aftermarket Industry Week, an annual, all-inclusive, one-stop exposition for the entire automotive aftermarket.

Sponsored by the Automotive Service Industry Association, the Motor and Equipment Manufacturers Association and the Specialty Equipment Market Association, the trade show will start in 1992 and will provide the umbrella event for the largest annual U.S. exhibit of aftermarket products, according to the associations.

Responding to industry preference and participation, the associations said the SEMA show and the Big I Show, co-sponsored by the ASIA and the MEMA, will be held side-by-side each November in two Las Vegas facilities.

The SEMA event will be held in the Las Vegas Convention Center, which encompasses 1.1 million square feet of space. The Big I Show will be conducted in the Sands Expo and Convention Center, which will contain one million square feet of exhibit space when completed in June 1993.

John Riess, past chairman of MEMA and chairman of the Big I Show, said representatives from the three organizations will provide policy direction.

"This super event is projected to draw more than 2,000 exhibiting companies, 25,000 industry buyers and 60,000 total attendees," said Riess, who is group vice president of marketing for Gates Rubber Co. in Denver.

Last year's SEMA show attracted 1,142 exhibitors and approximately 28,000 attendees.

This year's Big I Show, held in conjunction with the Pacific Auto Show in Las Vegas, had 689 exhibitors and 30,123 attendees, including buyers.

Although ASIA is severing its relationship with the Pacific Auto Show under the new arrangements, Dale Nelson, executive manager and chief administrative officer for Pacific Auto Show, said the group will hold a show Feb. 5-8, 1991 in Anaheim, Calif.

Riess said there will be many business and social events along with the exhibitions, some conducted by individual sponsors and others by the three associations.

The Big I and SEMA shows for this year and 1991 will be held as planned, he says.

In addition to the new show in Las Vegas, Riess said the associations' eastern regional shows will be combined into an annual side-by-side event. It will be held east of the Mississippi River, beginning in 1992. The show will alternate among sites in Chicago, Atlanta, Atlantic City, N.J., and other possible locations.

Michael Warn, chairman of SEMA and president and chief executive officer of Warn Industries of Milwaukie, Ore., said principals of the three groups have been analyzing the possibility of concurrent shows for over a year. The intent is to reduce costs by creating fewer individual shows.

Gene Gardner, chairman of ASIA and director of planning, quality and productivity for E.I. DuPont Co. of Wilmington, Del., said it is gratifying to know that "when the chips are down, we can pool our resources and address common challenges to improve the profitability and viability of manufacturers, distributors and end-users alike."

Another major trade show sponsor, the Automotive Parts and Accessories Association, claims to have commited in 1987 to exploring the possibility of holding a side-by-side show with other groups.

But it was not invited to participate in the talks that resulted in the super-show concept.

Julian Morris, president of APAA, said its 1989 show attracted 920 exhibitors and 25,970 total attendees, including buyers.

Service Technician Ronald Biatowas utilizes multi-lingual tools in the diagnosis of high-tech Saab cars.

NO GUESSWORK

Saab 'smart' tool aids in fault diagnosis

ORANGE, Conn. — Technicians at Saab-Scania of America's 363 dealerships are using a hand-held tool that enables them to communicate in one of four languages with the electronic systems built into Saab 9000 and 900 models.

Developed by Saab-Scania AB of Linkoping, Sweden, the multilingual, electronic device, called the Intelligent Saab Tester, can display information in English, French, Spanish and Italian. Future models will be programmed to display other languages.

According to John Libbos, product evaluation specialist for Saab-Scania of America, the tool enables technicians to scan and retrieve fault codes from compatible microprocessor-based vehicle systems.

The fault code is displayed on the tool and usually refers to a diagnostic troubleshooting chart, Libbos said. In some cases, the display gives instructions on how to correct the fault.

"The resulting benefits are easy and reliable fault tracing, simplified location of intermittent faults, faster service and increased customer satisfaction," Libbos said.

The tool was designed primarily for diagnosing faults in electronic systems that incorporate self-diagnosis functions, such as Saab's patented direct-ignition system. It also communicates with the vehicle's fuel-injection system, automatic climate control, automatic performance control and the electronic display unit.

Saab developed the tester to allow expanded capabilities in the future, Libbos said. For example, by using an interface cable, the unit can be connected to a personal computer or printer. Then, data collected by the diagnostic tool can be compared with reference values or can be used to compile statistics and other followup tasks.

Service volume rises again

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

The rate of growth of new-car dealers' service and parts business in April topped the March increase by 3.9 percentage points, according to the Automotive News Service Index.

April's service and parts volume amounted to 110.1 percent of the business recorded by dealers in the same month the year before. The March increase over the same month of 1989 amounted to 6.2 percent.

April was the fourth consecutive month to show a gain over the year-earlier service and parts volume. It also marked the third consecutive month that all five indicators used in the Service Index showed increases.

The No 1 indicator in April was sales of all parts and accessories, which topped the year-earlier volume by 11.8 percent.

The runner-up was shop parts sales for customer-paid and warranty repairs, up 11.0 percent, followed by total labor sales (customer paid and warranty), which were up 10.4 percent.

SERVICE INDEX
110.1★

	April '90 vs. April '89	Jan.-April '90 vs. Jan.-April '89
Gross Profit on All Labor and P&A Sales	+ 5.7%	+ 7.8%
Repair Orders Written	+ 4.8%	+ 1.4%
Total Labor Sales (Customer & Warranty)	+10.4%	+ 9.2%
Shop Parts Sales (Customer & Warranty)	+11.0%	+ 8.3%
Sales of All P&A	+11.8%	+10.6%

★ Survey by Automotive News shows that dealers' service and parts business in April 1990 was 110.1 percent of business in April 1989. Service business in the first 4 months of 1990 was 110.5 percent of business in the corresponding period in 1989.

Gross profit on all labor, parts and accessory sales — the most important indicator from the dealers' viewpoint — was 5.7 percent above last year's figure, while repair orders written were 4.8 percent over the number written in the same month a year earlier.

Figures used in the Service Index are averages compiled from reports on shop operations from a cross section of the nation's new-car dealerships.

Service and parts volume for the first four months of 1990 amounted to 110.5 percent of the business done in the comparable period a year ago. All indicators used in the compilation also were up from the corresponding 1989 period.

Year-to-date indicators lined up this way: Sales of all parts and accessories, up 10.6 percent; total labor sales, up 9.2 percent; shop parts sales, up 8.3 percent; gross profit, up 7.8 percent; and repair orders written, up 1.4 percent.

Costs are top fleet concern

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

NORTHBROOK, Ill. — Costs are the prevailing concern for corporate automotive fleet managers, according to a survey by *Runzheimer Reports on Fleet Management*, an industry newsletter.

Maintenance and repairs costs, cited by 31 percent of the 250 respondents, is the "most difficult problem" they face day-to-day.

General cost control was mentioned by 10 percent. Another 10 percent cited getting cars in for scheduled service and preventing driver abuse of vehicles.

Managers' visions of the future echo their current problems, the survey found. Nearly one-third (32 percent) indicated rising costs will be their greatest future concern.

Increased government regulation of fleets was the top concern of 11 percent, while 10 percent rated alternative fuel requirements first.

SERVICE BRIEFS

Dealer of the year

BRIDGEPORT, N.J. — Mitsubishi Fuso Truck of America Inc. selected Marano Truck Sales and Service of Philadelphia as its 1989 National Parts Dealer of the Year.

According to Bill Walter, director of parts operations for Mitsubishi Truck, Marano Truck received the award because it "demonstrated professionalism and excellence in the performance of its parts department."

Seat-belt retrofits

FLINT, Mich. — General Motors' Service Parts Operations has prepared an illustrated brochure that is a step-by-step guide to retrofitting older-model GM cars and trucks with rear-seat lap-shoulder belts.

The brochure is entitled "Installing Rear Seat Lap-Shoulder Belts." GM said it is providing the publication and kits priced below cost to encourage public use of the belts, whether they are installed by new-car dealers, independents or do-it-yourselfers.

The kits are $99 and include belts for the two rear outboard seating posisitons. The kits can be purchased from GM dealers, and the brochures can be obtained by writing to GM Service Parts Operations, Public Relations, 6060 W. Bristol Rd., Flint, MI 48554.

Porsche donates parts

RENO, Nev. — Porsche Cars North America Inc. has donated $170,000 worth of automotive equipment to the Washoe County School District in Nevada for use in an advanced automotive class for high school students.

The donation includes 16 engines, six transmissions, tools, assorted components and service manuals for all models, according to Larry Morris, vice president of service and parts for Porsche.

Porsche also will train school district instructors who, in turn, can teach students, Morris said.

Volvo aids independents

ROCKLEIGH, N.J. — Volvo North America Corp. has begun an effort to improve service and parts distribution to independent service facilities.

The program, to be tested by Volvo's service operations in dealerships in its metropolitan New York City region, is designed to create a closer independent-dealership relationship and to provide independents with better Volvo wholesale parts service.

A Dealer Wholesale Advisory Group of parts managers has been formed to work with Volvo on developing ways to improve service to independents.

Selected for their success in wholesaling Volvo parts, members are expected to evaluate pending strategies for the program. They include: Dick Johnson of Don Beyer Volvo, Falls Church, Va.; Will Judd of Ravenna Volvo, Seattle; Roger Martin of Turner Volvo, Sacramento, Calif.; Jim Nenning of Star Volvo, Nanuet, N.Y.; Tim Pierce of Warren Henry Volvo, Miami; Al Sanchez of Mission Viejo Volvo, Mission Viejo, Calif. and Roger Stolle of Brentwood Volvo, St. Louis.

Toyota picks school

ST. LOUIS. — Toyota Motor Sales U.S.A. has started a technician training program at Ranken Technical College here.

The company will provide a pickup truck, two cars, manuals, teaching equipment and auto components for the program, which will educate 44 students annually.

The program has been duplicated by Toyota at 60 other community colleges across the country.

East Bloc, Asia to propel new-car registrations in '90s

Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Worldwide new-car registrations will remain flat in 1990 as declining markets in North America and Western Europe balance increases elsewhere, according to a forecast by DRI/McGraw-Hill's European branch.

The report anticipates a mere 0.1 percent sales increase in 1990 to 35,438,000 units compared with a 3 percent rise to 35,386,000 in 1989 and a 6 percent jump to 34,426,000 in 1988.

But DRI-Europe expects renewed global momentum that will push the total market to 38.6 million cars by 1994, a 16 percent increase over 1987.

The London-based research group also predicts that from 1990 to 1995, new registrations in Eastern European countries will increase nearly 30 percent to 2.94 million units and that production will grow 34 percent to 3.28 million.

"Despite the unsettled state of the U.S. market, the outlook for the rest of the world is mostly good," the report said. "As such, the global demand for passenger cars is still not envisaged to turn down."

DRI predicts the U.S. and Canadian markets combined will fall slightly from 10.86 million units in 1989 to 10.75 million this year. In the United States, the outlook is for stable consumer confidence, but a drop in real disposable income growth in the first half of the new decade. When combined with increasing loan maturities, extended warranties and improved vehicle quality, the effect will be reduced replacement demand, according to DRI.

"As a result, the U.S. is set for a tough time ahead, and after a further small fall in 1990, it is projected to hover below 10 million units until 1994," said DRI.

In Western Europe, the group expects moderate growth not exceeding 3 percent annually until the 14 million plateau is reached in 1994. DRI predicts a slight downturn in Western European sales this year to 13.35 million units compared to 13.42 million last year. But it says most of Europe's key markets will continue to expand in 1990. The overall slippage is attributed to a drop in the British and Spanish markets this year.

West German registrations are expected to reach 2.95 million units in 1990, eclipsing the 1987 record, while France and Italy each surge above 2.3 million units to set new national marks this year.

DRI views the Asia-Pacific rim as a major growth area during the next five years, with Japanese sales rising from 4.4 million last year to 4.9 million in 1994.

In 1990, DRI expects new-car registrations in Eastern Europe to increase to 2,316,000 from 2,276,000 last year. Production will rise to 2,488,000 from 2,455,000 in 1989.

DRI predicts that 35 percent of the capacity in Eastern Europe in 1995 will be new, including 635,000 units replacing existing capacity and 500,000 units of new capacity. DRI foresees Eastern European exports rising from 179,000 in 1989 to 330,000 in 1995, an increase of 84 percent.

The largest growth will be in the Soviet Union, which accounts for two-thirds of the East Bloc population.

NEW-CAR REGISTRATIONS AND PRODUCTION FORECASTS (x 000)

	1987	1988	1989	1990	1994

Daihatsu weary of Poland talks

TOKYO — Daihatsu Motor Co. acknowledges that its plans for a joint venture in Poland have stalled.

The company said it did not stop negotiations, but after months of no response from Poland, a spokesman said, "We are tired."

Daihatsu and a consortium of Japanese groups have been holding on-again, off-again talks with the Polish national manufacturer Fabryka Samochodow Osbowych.

Talks on a large scale joint venture were on at the end of last year. The original target was 120,000 cars a year with an estimated price tag on the project of 100 billion yen ($658 million).

In January, when a feasibility study was still months away, Daihatsu proposed a modest, short term beginning of building 5,000 to 6,000 units a year with all parts shipped from Japan.

Daihatsu said there is still no response from Poland, and that no one in the government seems to have any responsibility for coming up with a response.

East Germans plan first auto show

LEIPZIG, East Germany — The German Democratic Republic will stage its first international auto show this summer.

The show, called Autovision, will be held here June 23-July 1.

Chrysler alters rebates and drops guarantees

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Corp. announced a new buyer incentive program that started June 1. It discontinued its guaranteed rebate program last week, though buyers who qualified are still eligible for extra cash if payments on their cars rise.

The new program includes the following payments on 1989 and 1990 vehicles: $750 on Chrysler LeBaron, Plymouth Acclaim and Dodge Spirit sedans and Plymouth Sundance and Dodge Shadow through Aug. 31. The rebate on 1989 and 1990 Jeep Cherokee and Wagoneer Limited is $1,000 through Sept. 30.

Other Chrysler buyer incentives expire July 31 and apply to 1989 and 1990 models unless otherwise noted:

- $2,500: Dodge Raider.
- $2,000: Chrysler Conquest; 1989 LeBaron coupe; Eagle Premier Limited; Dodge Ramcharger; 1989 Dakota (except S-model); and D/W series pickups (except diesel and club cab).
- $1,500: Eagle Premier ES and 1989 Summit, Dodge Monaco ES; 1989 Dodge and Plymouth Colt and Colt Vista; 1989 Jeep Comanche (except 2wd short bed); 1990 Dakota (except S and Club Cab) and Dodge D/W club cab.
- $1,000: Chrysler 1990 LeBaron coupe; Imperial, New Yorker, Salon, Landau and Fifth Avenue; Dodge Dynasty, Monaco LE, Daytona ES Turbo and Shelby; D/W diesel pickup, Dakota S model and Club Cab, Ram van conversions, 1989 Ram 50 4wd; 1990 Dodge and Plymouth Colt except base three-door and wagon); Eagle Premier LX; 1990 Summit; all 1990 Jeep Comanche models and 1989 Comanche 2wd short bed; Cherokee, Wagoneer and Grand Wagoneer.
- $750: Plymouth Horizon and Laser; Dodge Omni, Daytona base and ES model; 1990 Colt Vista; 1989 Dodge Ram 50 2wd; Eagle Talon.
- $500: Jeep Wrangler, Dodge Ram Van and Wagon.

In lieu of cash, customers may choose finance rates that range from 2.9 percent to 10.9 percent, depending on the contract length.

Chrysler also is paying $750 factory-to-dealer incentives on Dodge Shadow and Plymouth Sundance.

Cadillac extended its customer rebates of $1,500 to $2,000 until June 30. BMW, which offered special finance rates on 325i, 325is, 325ix and M3 cars, allowed their program to expire May 31.

GB still needs car project help

By Luca Ciferri
STAFF CORRESPONDENT

TURIN, Italy- Gianni Bulgari, a member of an old and wealthy family of jewelers, has started his own car company. The car would be a sporty-looking luxury vehicle with two doors and five seats.

Bulgari, who has spent $3 million on the project, is now looking for a partner to produce the car. He estimates it will require an investment of $40 million to $80 million in development and tooling. If one can be found, the first units could appear around 1993 or 1994.

GB, the company name and the initials of the promoter, is looking mainly at the European market, although the United States and Japan are being considered.

GB introduced itself with ads in *Automotive News* (May 28) and *Financial Times*. The company describes its creation as "a compact personal luxury vehicle with sporting character and high versatility." It adds, "A key feature . . . is a new cabin offering significantly improved passenger well-being within a space-efficient package." It apparently has three front seats and two rear.

The car's layout includes an as-yet unspecified front-mounted, transverse engine and four-wheel drive. The engine will likely be under 2.0 liters. With multi-valve head, fuel injection and turbo, it will produce up to 200 horsepower.

GB originally planned to produce 50 units a day, though estimates have now been reduced to 25 a day, or 5,000 cars a year.

Bulgari, a collector of Ferrari technical drawings, has been a consultant to Fiat Auto S.p.A., particularly on Fiat Uno and the Alfa Romeo 164's launch in 1987.

He sold his share in the family business three years ago and started his own car company.

The styling model, which was designed by Bulgari, was built in the Model Systems studio in Moncalieri, Italy, by Emanuele Nicosia, formerly of Pininfarina, and Graziano Pagliasso, late of Ital Design.

Lotus Engineering Ltd., Group Lotus' engineering contract division, is involved in body and mechanical engineering, as well as the first running prototype's construction, expected in August.

EPIC srl, headed by Enzo Prearo, formerly of Carrozzeria Bertone S.p.A., is responsible for production engineering. Ludvigsen Associates Ltd. is helping with strategic and marketing aspects.

The prototype is powered by a 2.0-liter 16-valve Opel Vectra engine — more because General Motors is the parent of both Opel and Lotus than because it will be the final powertrain choice.

Holiday trims U.S. truck, car production

By Greg Bowens
SPECIAL CORRESPONDENT

U.S. automakers' scheduled production dipped in the wake of a holiday week. Automakers slated production of 121,895 units last week, 8.08 percent below the previous week and flat with the year-ago week. The year-ago week also was a holiday week.

So far, 2,608,618 cars have been assembled this calendar year, 20.61 percent below the 3,285,757 completed last year at this point.

Scheduled truck assembly totaled 77,933 units, 10.77 percent below the previous week and 6.92 percent above the year-ago week.

Year-to-date, 1,722,133 trucks have been assembled, 11.97 percent below last year's 1,956,246 trucks produced at this time.

Last week's targeted build was shared as follows: General Motors, 46.76 percent; Ford Motor Co., 22.24 percent; Chrysler Corp., 13.29 percent; Honda of America Manufacturing Inc., 6.23 percent; New United Motor Manufacturing Inc., 3.45 percent; Toyota Motor Manufacturing U.S.A. Inc., 2.90 percent; Diamond Star Motors Corp., 1.95 percent; Mazda Motor Manufacturing (USA) Corp., 1.84 percent; Nissan Motor Manufacturing Corp. U.S.A, 1.03 percent; and Subaru-Isuzu Automotive Inc., 0.31 percent.

Ford and GM plants scheduled overtime to make up for the lost Monday. Ford scheduled daily overtime in its Wixom, Mich., and Wayne, Mich., facilities. Saturday overtime was scheduled for Kansas City, Mo.; Louisville, Ky.; St. Paul, Minn.; and St. Louis plants. The Edison, N.J., plant is down for changeover until September. Chrysler reported no overtime.

This week Chrysler's Belvidere, Ill.; Sterling Heights, Mich.; and St. Louis II plants scheduled two nine-hour daily shifts. Saturday overtime has been scheduled for Belvidere; Newark, N.J.; Warren, Mich.; and St. Louis.

GM scheduled Saturday overtime at Detroit-Hamtramck; Lordstown, Ohio; and Lake Orion, Mich. Both Lansing, Mich., plants operated on Saturday overtime as well. GMC Flint, Mich., assembly scheduled one overtime shift, and Moraine, Ohio, operated two overtime shifts Saturday.

Canada output back to normal

Canadian automakers scheduled 25,190 cars last week, 62.53 percent up from the previous week and 9.76 percent more than the year-ago week.

The large production increase was due to assembly plants getting back to full operation. A protest by Canadian truckers cut parts shipments the week of May 22.

Year-to-date, car output totaled 441,282, up 0.86 percent.

Truck production rose 23.19 percent from the previous week and 6.88 percent from the year-ago week with scheduled production at 20,651 units. Year-to-date truck production totalled 397,472 units, down 10.17 percent compared with

GM offers to buy back all 1991 rental cars

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

In a policy shift clearly aimed at mollifying dealers, General Motors will offer to repurchase all its 1991 program vehicles from daily rental-car companies and resell them to dealers through factory-sponsored auctions.

GM's policy switch could result in fewer used-car lots operated by daily rental companies. Car dealers complain that those lots have an unfair cost advantage.

Ford Motor Co. is considering a buyback program similar to GM's, a Ford spokesman said.

"We will offer rental agencies the opportunity to sell back to us all cars we sell to them," said J. Michael Durrie, GM general director of fleet and government sales.

"It will certainly reduce the need for daily rental company used-car lots," he said.

"They will be happy to send back the cars. It will lessen the need for retail used-car business by the rental companies."

More than 750,000 vehicles — known as program cars — are sold to daily rental agencies each model year by domestic and foreign auto companies. Under the system, automakers usually repurchase those vehicles at a price based on a guaranteed rate of depreciation, then resell them to dealers through auto auctions. Companies normally repurchase 70 to 75 percent of the vehicles in the programs.

Sometimes those vehicles spend only a few months in service. For example, GM's program cars are in service at least four months and have a 20,000-mile maximum without penalty.

For both dealers and rental companies, the program vehicles are clean, low-mileage cars that are much preferred over trade-ins by retail customers.

In the past, GM repurchased about 75 percent of its program vehicles for redistribution to dealers, although GM has run programs in which it bought back 100 percent of some luxury models.

Daily rental companies whole-

Supply-side woes

Transplant sales elude U.S. parts firms

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

Despite years of promises by Japanese carmakers to increase their purchases of American parts, many domestic suppliers remain skeptical and frustrated about the market today.

Eight years and 11 car plants after the Japanese began moving production into North America, some U.S. firms still complain privately that they can't get a foot in the door of the Japanese system, that Japan's corporate structure is rife with unfair trade practices and that the promises to buy more U.S. parts are essentially hollow.

The claims are doggedly challenged by Japanese industry officials, who cite figures showing a 300 percent growth in U.S. parts procurement during the past five years. (Much of that represents parts acquired from Japanese parts plants now operating in North America.)

They also point to new commitments by the carmakers' Japanese factories to double and triple their imports of U.S. products to about $800 million by 1992. In addition, a trade mission to Las Vegas by 150 top Japanese purchasing executives in April resulted in more than 179 agreements in principle to purchase U.S. components.

The developments have spurred optimism in some circles. Every Japanese transplant has vowed to increase U.S. sourcing wherever possible. And some are opening U.S. engineering offices that should increase local sourcing.

In a period of industry turmoil, larger domestic parts firms, which made up most of the U.S. participation in the Las Vegas meetings, believe they might be more successful than smaller partsmakers because of their deeper pockets. Bigger suppliers have the necessary funds to develop products and to establish joint ventures with Japanese suppliers

Ford Credit switches to tiered loans

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — Ford Motor Credit will offer a national tiered financing plan for Ford and Lincoln-Mercury dealers this fall.

Ford Credit says the program will match finance rates to consumer credit risks and make the captive finance unit more competitive with local banks, some of which use tiered-rate financing.

Under the program, Ford Credit will offer lower-than-current rates to the best credit risks and higher-than-current rates to higher-risk buyers. It will be the standard pricing policy for Ford Credit in the future.

William Odom, chairman of Ford Credit, said the tiered financing program, called Rapid Score Value Pricing, or RSVP, began March 12 in 21 states. Dealers using the program represent 35 percent of Ford Motor's retail sales. Odom said Ford Credit hopes to have all Ford and L-M dealerships in the program this fall.

Under the program, customers are classified as level one (lowest risk) to level four (highest).

Ford told its dealers May 31 that a level one customer can receive a finance rate that is 1.25 percentage points below the base rate. Level two customers receive the base rate. Level three and level four customers receive rates that are

Bidwell: "Jerry (Greenwald) wasn't indispensable. God knows, I'm not indispensable."

BIDWELL TO RETIRE: *Personal reasons cited for Jan. 1 exit*

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — In the wake of top-level executive departures at Chrysler Corp., Chrysler Motors Chairman Bennett Bidwell said he plans to retire Jan. 1 at age 63 for personal reasons.

Bidwell said in an interview that health problems are not forcing the departure. But he acknowledged that his retirement is "preventive maintenance" and that he seeks a slower pace to improve his health. Bidwell also said he wants time for family and personal pursuits.

Iacocca to stay on indefinitely
Page 44

Asked if his decision to retire Jan. 1 is irreversible, Bidwell said, "Nothing is irreversible, but it is my plan to retire."

Bidwell's decision to retire is

GM rolls into Soviet Union

Ladas to get catalytic converters, engine computers

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors' $1 billion agreement to sell components to the Soviet Union's leading auto manufacturer gives GM a foothold for future expansion there.

GM last week became the first U.S. auto manufacturer in modern history to establish a working relationship with a Soviet automaker. GM signed an agreement to sell engine management control systems for Lada automobiles.

The systems produce cleaner-burning engines, and improve fuel economy and performance. GM will provide the systems including catalytic converters to the Volga Auto Works plant in Togliatti, 700 miles southeast of Moscow, where the agreement was signed.

The systems will be used on Ladas to be exported from the U.S.S.R., mostly to Europe. The cars currently do not meet U.S. environmental regulations, which will become the standard in Western Europe in 1992.

In addition, GM is in the early stages of negotiating a second deal with Volga Auto Works to jointly manufacture catalytic converters in the Soviet Union. Those negotiations will probably give GM access to the Soviet Union's supply of platinum, used in making catalytic converters.

William Hoglund, executive vice president in charge of GM's worldwide component operations, said GM is establishing a base for future expansion in the Soviet Union.

"If you ever want to play in that market, you have to start someplace," Hoglund said.

"It's been our impression that the first company in there would certainly have a better opportunity to participate in that very, very long-term outlook rather than if we stood back and waited."

The deal calls for 150,000 engine management systems annually over five years.

GM divisions in the United States will provide the following components:

- Delco Electronics will build engine control modules;
- AC Rochester will provide fuel injectors and fuel rails;
- Delco Remy will produce the ignition components;
- Packard Electric will supply the wiring systems.

GM will engineer the systems initially to fit Lada's old 1.5- and 1.7-liter four-cylinder engines and train workers to install them. GM will be paid in U.S. dollars for the systems.

The contract allows expansion of the agreement to include other Soviet engines and more than 150,000 systems.

For now, Hoglund said, GM will focus on the initial component supply agreement. But future possibilities could range from further component supply agreements to joint-venture vehicle-building.

"The mind can dream a lot of things," Hoglund told reporters in Detroit.

GM may eventually supply other components such as steering systems, electronics and brakes to Volga Auto Works.

Hoglund said GM beat out a number of strong competitors from the United States and Europe for the Soviet business.

Hoglund said he didn't know if Soviet President Mikhail Gorbachev's visit to the United States last week, during which he met with representatives of the U.S. auto industry, prompted the signing of the agreement in Togliatti.

AUTOMOTIVE NEWS/JOE WILSON

GM executive William Hoglund explains in detail the components supply agreement between GM and the Soviet Union, valued at $1 billion.

Fiat, Mercedes also seeing red

TURIN, Italy — Fiat Pandas are to be built in the Soviet Union, says Cesare Romiti, Fiat Auto S.p.A. managing director. The Pandas are the first stage in a $1.35 billion plan to lift Soviet auto output from 1.3 million to 2.3 million.

Under the original plan outlined last December, the first phase of the joint venture called for the Soviet Union's own Oka minicar to be built at the new Yelabuga factory, some 700 miles southeast of Moscow. Fiat officials now say that is not possible if the planned production start-up of date 1991 or early 1992 is to be met.

The second phase — a Giugiaro-designed hatchback known as A93 — is expected in 1993. The third phase will be production of a four-door sedan based on the Fiat Tipo/Tempra platform.

The Italian company has been an automotive pioneer in the Soviet Union. It built and equipped the Togliatti factory, which began producing Fiat-derived Ladas in 1970.

Mercedes-Benz AG is negotiating with the Soviet Union to produce the mid-range W124 sedan at a plant near Gorki. It reportedly has asked Mitsubishi Corp. to help construct the factory, which would produce up to 300,000 units a year.

— Luca Ciferri

Less than 19 months away

A new photo of the Viper reportedly shows final designs for the windshield and side exhaust pipes, concealed by body color skirts. Chrysler Corp. insiders confirmed that engineers are working toward a January 1992 introduction for the fiberglass-bodied sports car. The sources denied that the team was battling insurmountable aerodynamic problems that caused vehicle instability at high speeds.

Sales blossom in late May, but full month is a downer

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Late May was a boon for sales of U.S.-produced vehicles with every domestic and transplant automaker reporting an increase.

The gains helped soften the blow of an otherwise sluggish month.

Toyota was the clear winner for the 10-day period, which had nine selling days compared with eight for the same period a year ago.

The extra selling day helped car sales post a gain of 7.08 percent and truck sales notch an increase of 14.40 percent. Total sales climbed 9.58 percent over May 21-31 last year. A total of 458,921 vehicles were sold.

On a daily-rate basis, the picture wasn't all that rosy. The daily selling rate was down 4.82 percent for cars, up 1.69 percent for trucks and down 2.60 percent for cars and trucks combined.

The full month turned out to be a loser in all three of those categories and for import cars, too. Sales of new cars and light trucks in May totaled 1,307,414 units, down 7.47 percent from last year. There were 26 selling days in May this year and last year.

The Big 3 automakers all suffered sales declines for the full month, while all the transplant automakers posted increases.

Toyota's sales of U.S.-built cars rose 156.84 percent for the 10-day period and 153.20 percent for the month.

Robert B. McCurry, Toyota Motor Sales U.S.A. executive vice president, said more cars were available to the public because of increased production at Toyota's plants in Georgetown, Ky., and Fremont, Calif.

Combining its sales of U.S.-built and imported cars, Toyota moved into third place in the U.S. market, up from sixth last year. In May, Toyota trailed only Chevrolet and Ford; it moved ahead of Honda, Pontiac and Oldsmobile.

Oldsmobile really took a dive for the month; its total May car sales slipped to 46,330 units, down 22.99 percent from last May.

Chevrolet was the sales leader for the month, just as it was last year. Including captive imports, Chevy increased its market share

see SALES, page 42

Saab to build GM model, close some parts plants

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Financially troubled Saab Automobile AB plans to close part of its component-making operations and turn the work over to outside suppliers in a bid to cut costs.

Saab Automobile President David Herman said losses in the first four months of 1990 more than doubled to 995 million crowns ($163 million). He attributed the decline to the Swedish market and U.S. competitive pressures.

Saab Automobile, a 50-50 joint venture between General Motors and Saab-Scania, also concluded an agreement last week to begin producing the Opel/Vauxhall Calibra at Saab-Valmet in Uusikaupunki, Finland, next spring.

Saab Car Division, the predecessor of Saab Automobile, lost 2.1 billion crowns ($344 million) in 1989 after earning a slim profit in 1988.

The plan to rationalize seat and wiring harness production is expected to result in an annual savings of 200 million Swedish crowns ($34 million). Between 1,100 to 1,400 jobs could be affected, Saab said.

Seat assembly at Kristinehamm, Sweden, and at Saab Textil in Trollhattan, Sweden, would be turned over to an outside supplier. Operations at Kristinehamm would cease with some activities at Kristenhamm transferred to Saab Textil. Saab estimated savings of 110 million crowns ($18 million).

Manufacture of Saab wiring harnesses is concentrated at Saab facilities in Kramfors, Sweden, and Halden, Norway, and also purchased from other suppliers. In the future, Saab expects to purchase harnesses from two or three international specialists, resulting in an expected annual savings of 90 million crowns ($14.8 million).

Wiring harness operations for Scania Trucks at Kramfors would be maintained while Halden would cease operations.

No timetable is set for the changes. Negotiations with unions under Swedish co-determination laws will begin immediately.

Opel/Vauxhall Calibras will be produced in Finland at a daily rate of more than 140 units. Saab will move much of Finland's 900 production to the underutilized Malmo, Sweden, plant where output will rise from 65 units daily to 140 by April 1991. Finland will continue as the only source of the 900 Cabrio and of 900s for the local market.

Correction

In the 1990 Market Data Book chapter on dealers, a high-volume Isuzu dealer, J.K.J. Isuzu, was incorrectly located in Pennsylvania. The dealership is in Woodbridge, Va.

Also, a top-volume Saab dealership president's name was misspelled. Werner G. Maeder is president of Zumbach Sportscars Ltd. of New York.

Numbers for Island Lincoln-Mercury, Merritt Island, Fla., were incorrectly estimated, according to top official Bruce Deardoff. Retail new-car sales totaled 967; fleet sales were 7,702 for a total of 8,669 units in 1989. Among the top 25 sales leaders, Island-Mercury ranked 14th with calendar year sales volume of $197.7 million.

Japanese to spend 23% more in 1990

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Japanese automakers are planning hefty increases in capital spending for the current fiscal year, despite recent gyrations on the Tokyo Stock Exchange.

The total will increase about 23 percent to the equivalent of $8.33 billion, according to estimates compiled by *Automotive News*. Most of the increase, according to analyst Neal Doying at Baring Securities, appears to be going into new product development rather than new capacity.

Low interest rates in recent years meant companies could raise what almost amounted to free money. That easy access is gone, at least for the time being. But it does not appear to have affected investment plans.

Analyst Steve Usher of Kleinwort Benson International said the big spending rush of the past year has probably peaked, largely because most of the plans have already been set in motion. The emphasis has been on rationalization and automation rather than new capacity, "cost-oriented rather than market-oriented," Usher said.

Toyota Motor Corp. is Japan's big spender, having committed 450 billion yen ($2.96 billion) for the fiscal year that ends June 30. It says the 480 billion yen ($3.16 billion) estimate for the 1990 calendar year is "reasonable." Much of its spending is to expand facilities for its luxury cars at the Tahara plant and to build a plant in Britain, its first European factory.

Nissan Motor Co. says it will spend 250 billion yen ($1.64 billion) during this fiscal year, an increase of 47.4 percent over last year. Much of it will go into expansion and renovation of the Kyushu plant.

Nissan, like most companies building new plants, insists it is following a scrap-and-build policy that the Ministry of International Trade and Industry has promoted for fear of trade disputes.

Nissan's plans to expand facilities in the United States and Britain will not be affected by changes in the stock market, Muramatsu said. But next year, if the market appears to be unstable, the company might have to reconsider other investment plans, he said.

Much depends on the growth in Japan. Sales in May rose 6.1 percent to 444,041 vehicles, a modest rise compared with the double-

see JAPAN, page 41

Toyota to hike production as it chases Ford and GM

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Toyota Motor Corp. expects to boost global vehicle output by 1.5 million units before the end of the decade, moving the world's No. 3 manufacturer closer to General Motors and Ford Motor Co.

The 33 percent jump from last year's 4.5 million units to 6 million was forecast by Toyota Chairman Eiji Toyoda at a groundbreaking for the company's plant in Derby, England, its first European plant.

GM's production declined 2 percent in 1989 to 7.95 million units, and Ford's slipped 1.7 percent to 6.4 million. Toyota's production grew more than that of any major manufacturer in the world last year, rising more than 15 percent from 3.9 million units in 1988.

Toyota figures to increase domestic vehicle production from 3.9 million last year to 4.5 million by the late 1990s, with overseas output rising from the current 600,000 to 1.5 million units annually.

"We are hopeful that we can achieve that kind of target toward the end of the decade," said a spokesman at Toyota's European liaison office in Brussels, Belgium. "But it is not a specific, concrete plan. Last year, we produced 4.5 million vehicles, and we are hopeful that by the end of the decade we can produce another 1.5 million units." The spokesman said Toyota's global figure will rise slightly in 1990 because of additional North American production.

By the late 1990s, Toyota expects its annual vehicle sales to consist of three million units in Japan and three million units abroad. Toyota is already nearing its long-standing goal of 10 percent of the world vehicle market. Toyota's global share was 9.2 percent last year.

Much of the focus of future investment would appear to be in Europe. Car production at Derby is scheduled to begin in late 1992, with output eventually reaching 200,000 units. Toyota is investing £700 million ($1.18 billion) at the site and will build an engine plant about 90 miles away in North Wales, initially producing 100,000 1.8-liter four-cylinder engines annually.

In addition, Toyota is thought to be considering a light commercial vehicle factory in mainland Europe and is reportedly interested in producing light commercial vehicles

GM ENGINES

New division faces big job to satisfy federal and buyer demands

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors' newly formed Engine Division has its plate full.

It faces the challenge of meeting potentially stricter emissions and fuel economy standards at the same time that the division must meet GM's aggressive product schedule. GM's future product programs call for improvements to existing engines as well as the development of new engines.

The challenges of the 1990s led GM to form the new Engine Division. Although it is a division, it has equal status with the two super car groups. The Buick-Oldsmobile-Cadillac Group and the Chevrolet-Pontiac-Canada Group were created in a 1984 corporate reorganization. Both had their own engine operations.

The Engine Division will pull the two engine operations into one organization. By year-end, 30,000 employees, including 2,000 engineers, and 10 U.S. engine plants will be under the wing of the new division.

Richard Donnelly, appointed this spring to head the Engine Division, said the top 16 jobs in the new organization have been filled. Other top positions will be filled by Aug. 1. And the rest of the 30,000 people will be transferred to the new organization by October. By Jan. 1, 1991, it will be fully operational, he said.

Donnelly, 46, is an electrical engineer and has headed B-O-C's powertrain operations and GM's Quality Network. He has been with GM 29 years.

Despite the prospect of tougher emissions and fuel economy standards coming out of Washington, Donnelly said the primary reason for the formation of the Engine Division was to improve customer satisfaction.

"We're convinced that the benefits are going to be better customer satisfaction," he said in his first interview since being assigned the division's top post.

But, he added, if some of the regulations being discussed in Congress become law, the Engine Division will put GM in a better position to meet them with financial and human resources.

Donnelly said customer satisfaction will be improved by reducing the complexity of the organization and spreading consistency throughout the engine operations. Product decisions will be made more quickly because there will now be one engine organization, not two, he said.

Ultimately, Donnelly said, the

Engine Division chief Donnelly: "We don't want to have nine different ways to engineer a crankshaft when one is truly the best way we know of today."

Just-in-time developer Ohno revered

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Taiichi Ohno, the man who developed the just-in-time production system, is at times likened to Henry Ford in the annals of automotive manufacturing. But Ohno, who died May 28 at the age of 78, had specifically set and fundamental approach to the manufacturing process, according to Rintaro Muramatsu, now retired professor of engineering at Waseda University. In the last decade, Ohno's concepts have rapidly spread throughout the industrialized world.

But his just-in-time methods and specifically when the Japanese auto industry was trying to revive business after World War II.

The traditional method of cutting costs by mass-producing a few types of cars was an American work style, Ohno wrote in a book entitled *Toyota Production System*. But it was not suitable for post-

April Canadian car, truck sales plummet

By Bill Vance
SPECIAL CORRESPONDENT

TORONTO — After holding steady in March, Canada's new car and truck sales went into a tailspin during April.

Sales of imported and North American-built cars and trucks were down 22.73 percent for the month. Through the first four months of the year, sales dropped8.19 percent.

Sales of North American-built cars were off almost 24,000 units, a 28.3 percent decline. The Big 3 all suffered: General Motors of Canada's North American cars were down 32.4 percent; Chrysler Canada, 30.97 percent; and Ford of Canada, 28.4 percent.

Imports also declined but not as badly, slipping 14.3 percent. Toyota dropped 11.7 percent in April and is now running about even with last year's pace. Eleven of the 17 importers were down for the month.

Among the gainers, Volkswagen saw its competitive pricing policy and its new Passat line contribute to a 26.3 percent gain for the month, and 24.3 percent year-to-date.

Honda also had real strength: Its imported models registered a 21.1 percent rise in April, while its combined imported and domestically built vehicles were up 28.4 percent.

Blame for the slide was directed at the high interest rate policy that Bank of Canada Governor John Crow is pursuing to stamp out inflation.

April's "results illustrate how high interest rates tend to put the brakes on car and truck sales," said Jack Clissold, Ford Motor Company of Canada Ltd.'s vice president of sales and marketing. "If consumer apprehension about interest rates is addressed, we know there remains inherently strong demand for new vehicles."

Bill Atkinson, vice president of marketing at General Motors of Canada Ltd., agreed. "High borrowing costs continue to impact our industry. We are hopeful that inflationary pressures will ease soon and that interest rates will begin to fall. This would greatly assist in stabilizing the automobile industry," he said.

Truck sales also were down, with domestic models taking the brunt of the loss. Sales dropped 10,007 units, 21.8percent. Chrysler suffered the most, off 29.9 percent. Imported trucks held about even with the best gain registered by Suzuki, up 33.6 percent.

Toyota supplier expands in U.S.

TG (USA) Corp., an affiliated supplier of aluminum steering wheels to Toyota Motor Manufacturing U.S.A., is doubling the size of its Perryville,Mo., manufacturing plant.

The expansion will add aluminum die-casting capabiliites to the operation, which is a joint venture between Mitsui & Co. Ltd. and Toyoda Gosei Co. Ltd., an affiliate of Toyota.

The move is expected to result in the addition of new original equipment business with United Motor Manufacturing Inc., a joint venture between Toyota and General Motors Corp.

Plant size will increase from 106,000 square feet currently to 221,000 square feet by year-end, with employment increasing from 250 workers to 400 by 1991.

The plant also manufactures vehicle trim parts and transmission parts. Production of those lines, as well as the number of different steering wheels produced, will increase as a result of the expansion.

Mack expects more layoffs

More layoffs and cost cutting will hit struggling Mack Trucks Inc. this year, the company's new chairman predicted. The current 17 percent decline in heavy-duty truck sales from 1989 will continue to dry up the company's funds, chairman Ralph E. Reins told about 200 shareholders at Mack's annual meeting. Since replacing John B. Curcio last year, Reins has laid off about 1,500 employees. Mack's current work force stands at roughly 7,870. Last year, Mack lost a record $188.4 million. While losing another $33.9 million in the first quarter of this year, the company stayed afloat by securing a three-year revolving bank loan worth $148 million. Renault Vehicules Industriels of France, which owns 44.6 percent of Mack's stock, also pitched in by purchasing $50 million worth of convertible subordinated debentures.

NEWS CLIPS

OLDS REALIGNS REGIONS: Oldsmobile has restructured its regional sales operations to put more emphasis on the West Coast. The West region now consists of only the Los Angeles and San Francisco zones. Dallas and Memphis, formerly West region zones, are now in the Southern region. The Central region was disbanded. Its Atlanta and Orlando, Fla., zones are now in the Southern region; the Pittsburgh zone goes to the Eastern region; and the Detroit, St. Louis and Cincinnati zones go to the Midwest region. The Charlotte, N.C., zone, previously in the Eastern region, now is in the newly formed Southern region along with Atlanta, Orlando, Fla., Memphis, Tenn., and Dallas.

WORTHINGTON EXPANDS: Worthington Industries Inc. has launched a precision-metal machining plant in Franklin, Tenn., to produce parts for power steering systems, transmissions and anti-lock brakes. The auto part machining operation, Worthington Precision Metals Inc., will supply a number of new automotive customers of Worthington, a metal and plastics producer with 24 plants in the United States and Canada. The 100,000-square-foot plant has begun limited shipments to mechanical system suppliers that serve Ford Motor Co. and General Motors Corp. A company spokesman declined to identify the customers. The 40-employee operation is currently working at about half of capacity, and expects to reach full production late this year.

PASSAT ARRIVES IN JAPAN: Volkswagen's Passat has gone on sale in Japan. The car is initially being imported from Germany by Yanase & Co. and sold by Nissan Motor Co. until Nissan begins assembling the model in Japan in mid-1991. Monthly sales of 700 units at prices of $24,000 to $28,000 are projected.

MAZDA OPENS R&D IN GERMANY: Mazda Motor Corp. has opened a $33 million research and development facility in West Germany that will provide mid- and long-term product planning, vehicle design and product development strategies for the European market. The facility, located in Oberursel on the outskirts of Frankfurt, is Mazda's fourth r&d operation outside Japan. The 118,000-square-foot building houses 77 employees, 43 of whom are European. The facilities include a design studio, clay modeling rooms, exhaust emissions analyzer and chassis dynamometer.

GLASS GOES BACK: The Delco Products Division of General Motors and Inorganic Recycling Inc. unveiled in Dayton, Ohio, what they said is the world's first recycling plant for electroplating waste. Delco Products uses chrome in the production of shock absorbers and suspension struts, creating 3,000 cubic feet of electroplating waste a year. The waste was disposed of in landfills. Now, the electroplating waste is mixed with additives and heated to 2,700 degrees Fahrenheit in a kiln to produce an environmentally safe, emerald green ceramic known as "moon rock." The material then has normal ceramic applications.

CADILLAC GOES TO SCHOOL: Cadillac has a joint education program with Detroit's Cass Technical High School. Dubbed Adopt A School, the program calls for the Detroit-Hamtramck Assembly Center to open its doors to 10 high school students a year, allowing them to visit the plant on a one-on-one basis with employees and learn about auto manufacturing. The plan will also provider four summer internships a year on jobs ranging from the assembly line to the front office.

CALLAWAY GOES SMALL: Callaway Cars, converter of high-performance Corvettes, has been awarded small-vehicle-manufacturer status by California transportation officials, guaranteeing the firm a chance to sell its cars there. The Callaway Twin Turbo, claimed to be the fastest performance car currently for sale in the United States, has been assigned a regular production option number by Chevrolet — RPO B2K — and has been listed in dealer order books as of April 1990. Its makers claim a 0 to 60-mph time of 4.44 seconds. Base prices for the 1990 Callaway Corvette are $58,454 for the coupe and $62,114 for the convertible.

REPURCHASE

FROM PAGE 1

saled the remaining vehicles or sold them on their used-car lots.

GM wants to sell vehicles to rental companies that both dealers and customers will buy.

Normally, daily rental companies buy less-expensive vehicles to reduce costs, says Durrie.

He says daily rental agencies will have to buy cars with a higher minimum level of options than in the past.

A better-equipped vehicle should also help GM recover its costs on program cars. Profits on program vehicles have been marginal, but there are other advantages.

Automakers like the fleet programs because they expose many people to their cars and help smooth out the peaks and valleys of retail orders at assembly plants.

Still, program cars pose a thorny problem for automakers.

The National Automobile Dealers Association says vehicles bought by daily rental companies are heavily subsidized by the makers.

The result is that daily rental companies buy them cheaper than even the dealers, says NADA.

Matters are made worse when these nearly new cars arrive on used-car lots owned by rental companies in direct competition with cars the dealers are selling.

Auto executives deny that, saying dealer and customer incentives even out the subsidies given to rental companies.

Even NADA President Ray Green concedes that the issue is murky. "Now it's more cloudy than before with the rebates, but our contention is that nobody should be able to buy cheaper than the dealer," he says.

"It means franchised dealers will have control over new cars and nearly new cars, which were daily rental cars going to daily rental used-car lots," says Green.

He lauded GM for doing it. "I think GM knows it has been hurting its dealers who are unprofitable," he said. "They want to see their dealers profitable."

But Green also says program cars hurt new-car sales. "Seventy-five percent are sold to new-car customers," he says.

GM cars make up a majority of Avis' 150,000-vehicle fleet. A spokeswoman for the company said it is premature to say how the GM program will affect its used-car sales. She said the company has about 100 used-car lots.

Michael J. Richardson, president and chief executive of Anglo American Auto Auctions, based in Nashville, Tenn., says GM's decision is beneficial to dealers.

"It means the daily rental companies will not have to retail product, so there should be a diminishing of their retail outlets," he says.

According to Richardson, GM has been aggressively marketing program cars. In 1989, the company remarketed about 250,000 vehicles through auctions, up from 204,000 a year earlier.

Richardson says GM's annual volume could reach 500,000.

Durrie conceded that the number of GM program vehicles is going up, but declined to disclose volume.

Will GM dealers be able to absorb the additional cars going to the auctions? According to Green, dealers will buy the additional cars. Besides, he says, only 59 percent of GM dealers now regularly attend factory auctions.

Although Richardson says that number is probably low, he has noted a surge this year in the number of GM dealers attending factory sales at Anglo's 23 auctions.

"We have seen a 20 percent increase in the number of dealers at our auctions," he says.

There's no doubt that program cars sell. GM and Ford program cars have a sales rate (the number of cars sold at the auction compared to the number registered) of nearly 100 percent. Chrysler's sales rate is about 90 percent. Imports are lower, at 75 percent, because there are generally fewer dealers per make.

JAPAN'S BIG SPENDERS

Company	1990 investment (billion yen)	Equivalent* (million $)	Change from 1989 (%)
Daihatsu	40	263	– 5.4
Fuji	NA	NA	NA
Honda	130	855	– 1.2
Isuzu	48	316	+50.0
Mazda	120	789	+80.4
Mitsubishi	140	921	+ 7.2
Nissan	250	1,645	+47.4
Suzuki	58	382	– 6.5
Toyota	480	3,158	+23.4
TOTAL	1,266	8,329	+23.1

*Dollar equivalents calculated at last week's 152 yen/$1 exchange rate.

The investment figures are for fiscal year April 1990-March 1991 except: Toyota's is an estimate for calendar year 1990; its fiscal year runs July through June. Isuzu's covers its fiscal year November 1989 through October 1990. Fuji is not releasing details until after its new board meets this month.

JAPAN

FROM PAGE 3

digit increases of last year. But May sales of cars with engines larger than 2.0 liters jumped 59.6 percent to 31,499.

Mazda Motor Corp. plans to invest 120 billion yen ($789 million) this year, an increase of 80.4 percent, largely on new facilities at Hofu. Mazda last year originally projected a 90 billion yen investment plan, but reduced spending to 66.5 billion yen after reconsidering marketing and distribution needs.

Mitsubishi Motors Corp. plans to spend 140 billion yen ($921 million) this fiscal year, an increase of 7.2 percent, largely on changeover for new models.

Isuzu Motors Ltd. is planning a 50 percent increase to 48 billion yen ($316 million), much of that to renovate its headquarters in Tokyo.

Honda Motor Co. expects to spend 130 billion yen ($855 million) on capital projects this year, a drop of 1.2 percent from 1989. It has completed most of its expansion work for a new line at the Suzuka plant and a new plant for the NS-X sports car.

The smaller companies are cutting investment, having upgraded their mini vehicles in the past year. Daihatsu Motor Co.'s spending will drop 5.4 percent to 40 billion yen ($263 million), and Suzuki Motor Co. will be down 6.5 percent to 58 billion yen ($382 million).

Fuji Heavy Industries is not making any forecasts for this fiscal year until its new board of directors reviews all projects. That board takes office this month.

ENGINE

FROM PAGE 3

Engine Division will be able to better address the needs of the vehicle divisions.

"They'll be coming to us, asking us to give them some differentiation. That might be differences in displacement, a normally aspirated engine vs. a turbocharged or supercharged engine. We can make tuning differences to differentiate the divisions."

Donnelly said he sees opportunities in the future to develop several variants from a basic engine family, which will mean better economies of scale.

"If you can get enough variance to satisfy five market segments from a base engine or family of engines, then you maintain the economies of scale that are so important," he said.

As for consistency, Donnelly said the division will incorporate strengths from each previous engine operation so the best method of doing a task can be used throughout the company.

"We don't want to have nine different ways to engineer a crankshaft when one is truly the best way we know of today," Donnelly said.

"There were good things in both organizations that weren't being transferred well," he added. "It wasn't that there was a reluctance to transfer the information. There was no way to transfer that information."

Like the car groups, the Engine Division will be divided into nine to 10 product teams. A team will include a chief engineer and the managers of the plants where the engine is built. In addition, all the other disciplines will be represented on the team — finance, materials management, personnel. Each team will be focused on one product or a family of similar products.

"We give product focus to the folks so that they can relate to the Corvette engine or the 3.1-liter V-6," Donnelly said. "They can say, 'That's my engine. I helped to make that better.' "

A team is responsible for improving the product and being involved in the development of new products, and it is responsible for running the team's business.

But unlike the teams at GM's car groups and vehicle divisions, the Engine Division product teams will have no designated leader. Donnelly calls this plan "roving leadership."

"We say the product and the issues around the product will determine in whose court the discussion and responsibility goes," he said.

Donnelly said the idea for the Engine Division was discussed during the 1984 reorganization, but really emerged from last October's GM corporate leadership conference in Traverse City, Mich.

During the conference, B-O-C leaders were split into subgroups. When asked for ideas on how GM could improve its ability to satisfy the customer or its effectiveness, nine of the 10 groups advocated formation of a single engine group. Donnelly, who headed the 10th group, reserved his opinion.

Following the conference, Donnelly was appointed to head a study committee to evaluate formation of a single engine group. Within the first month of the three-month study, the committee decided to move ahead with the idea. The next two months were spent deciding how to do it.

Donnelly said the committee agreed to back off from a larger plan to merge GM's Hydra-matic Division, which builds transmissions, and the Central Foundry Division with the engine operations into a powertrain group. That move could have affected 72,000 employees and 26 plants.

Instead, the committee opted to merge only the engine operations of the two car groups, monitor how it works for two years and then decide on further consolidation of powertrain operations.

In the meantime, Hydra-matic and Central Foundry will have representatives on a newly formed Powertrain Advisory Council that will monitor the Engine Division's progress and serve as a liaison organization between the two component divisions and the Engine Division.

Donnelly said it's unlikely that Hydra-matic and Central Foundry will become part of the Engine Division. But the three eventually could report to a single executive.

OHNO

FROM PAGE 3

in small volumes.

The original concept of just-in-time production was actually proposed by Kiichiro Toyoda, who founded the Toyota Motor Company in 1937. But Ohno helped make it a reality. After the war when he was in charge of the machine shop, he set out to build a new production system "block by block" in response to Toyoda's directive to "catch up with America in three years."

Many facets of the system flowed from the original intent to eliminate waste: the just-in-time philosophy of ordering only the parts needed when they are needed; the *kanban* method of tagging orders systematically; emphasis on small lot production and level production; the facility for stopping the line to correct problems and control quality; and the need to train workers and to produce machines for multiple jobs.

Ohno's approach was to reverse the order of transferring materials on the production line. Taking final assembly as a starting point, parts were ordered as needed in a reverse order back to the original starting point. The result was a reduction in inventory throughout the system, which reduced costs and led to greater efficiency.

The cue for the new system came from the American supermarket. Ohno was attracted to the way supermarket customers choose what they want, and then the shelves are restocked and new supplies are ordered accordingly.

Ohno had seen American manufacturing plants, but the supermarket left the lasting impression.

The system of matching orders to

Ohno

meet the consumers' needs was much more efficient, Ohno decided, compared to old Japanese methods of producing products and then going door to door to sell them.

Ohno started to introduce some of the supermarket principles in the machine shop in 1953. Eventually, the idea developed into the *kanban* system for organizing orders.

It took 10 years to develop the system within Toyota. It took 20 years to incorporate outside suppliers. But the system has continued to evolve at Toyota, and other companies that picked it up have adopted their own applications under different names.

Muramatsu credits Ohno's manufacturing methods as a major factor in the present economic strength of the Toyota Motor Corp. But Ohno said that no one paid much attention to the system until the oil shock of 1973, when many Japanese companies slipped into the red. Toyota still showed healthy returns, which drew attention to its system.

to 15.71 percent from 15.36 percent a year ago.

For the first five months of this year, the top car sellers were Chevrolet, Ford, Toyota, Honda and Pontiac. Ford was the sales leader at this time last year.

Except for a handful of domestic and imported lines, virtually every nameplate suffered year-to-year sales declines in May.

"I would not label overall demand as strong," said Tom Webb, chief economist for the National Automobile Dealers Association. "On the domestic side, the only units that are really moving are the totally redesigned models and the niche markets such as sport-utilities and luxury cars."

Strong sales of the Chevrolet Geo Prizm and Cadillac helped push GM's domestic sales up 6.38 percent for the 10-day period, compared with last year. Sales of the Cadillac Seville soared 251.66 percent for late May and 130.54 percent for the month. But GM's total May sales of U.S-built cars lagged 13.33 percent behind last year's.

The Lincoln Town Car continued to be a star for Ford Motor Co., with a 73.22 percent increase in sales for the latter part of May. The company's domestic-car sales were up 6.61 percent for the 10-day period but dipped 17.19 percent for the month.

Chrysler's domestic sales edged up 3.15 percent the last 10 days of the month; for the entire month, Chrysler's sales fell 16.52 percent.

The more popular Chrysler models were the Plymouth Acclaim and Dodge Shadow; sales of the Eagle Premier model continue to sag.

Compared to last year, sales were up for all of the transplant automakers for both the 10-day period and the entire month.

Import car sales fell 11.39 percent from May last year. The only imported nameplates to increase their sales were Acura, Audi, BMW, Chevrolet Geo, Mercedes-Benz, Mitsubishi, Suzuki and Volvo.

Light-truck sales totaled 435,392 for May, down 3.17 percent from last year. Every Big 3 make was down, although Ford's new Explorer was up 67.84 percent over 1989 Bronco II sales, and Chevrolet sold four times as many Geo Trackers as last year.

Light-truck sales were up 19.15 percent for Toyota, 33.32 for Nissan and 41.03 percent for Mazda.

Court upholds arbitration for Saturn dealers

By Helen Kahn
SENIOR CORRESPONDENT

WASHINGTON — A federal court has upheld a binding arbitration clause governing disputes between Saturn Corp. and its dealers.

The 4th U.S. Circuit Court of Appeals in Richmond, Va., agreed with Saturn and General Motors, who argued the clause was legal under the Federal Arbitration Act, which pre-empts state law.

"If Saturn could not require that Virginia dealers agree to arbitration," said the court, "it could be forced to contract with dealers who agree to all provisions except arbitration despite the fact that arbitration is the core element of Saturn's Dealership Agreement."

The court also noted that only dealers who want to sell their franchises must agree to arbitration.

The decision reverses last August's lower court victory for the Virginia Automobile Dealers Association and the National Automobile Dealers Association. That court held that binding arbitration in franchise disputes was illegal because the so-called "dealer day-in-court" law allows dealers to choose any dispute settlement method, including going to court.

In 1985, Saturn made the binding arbitration clause part of its dealer franchise agreement. Virginia's motor vehicle commissioner later ruled that Saturn could not impose the arbitration clause as a condition to becoming a dealer. Saturn then took the case to court.

The Saturn franchise agreement says that if a dispute between the dealer and factory arises, either Saturn or a dealer may ask for mediation. The dispute is given to a panel, which recommends a consensus solution. If either party rejects that solution or if both waive mediation, they proceed to binding arbitration.

The arbitration panel, which consists of two dealers and two Saturn representatives, must reach a consensus decision. The decision is final and can't be appealed, except as provided by the Federal Arbitration Act.

Virginia is the only state that requires motor vehicle commissioner approval of franchises.

Trucks set May record; 407,765 built

By Anne Wright
AUTOMOTIVE NEWS STATISTICIAN

U.S. truckmakers set a production record for May with 407,765 units, surpassing the previous May high of 392,946 last year by 3.77 percent. The May total was up 20.54 percent over April.

Last week's estimated truck production of 94,323 was 18.62 percent above the prior week and 5.85 percent above the year-ago week.

Automakers produced 620,506 units in May, the highest for any month in 1990. Production rose 21.84 percent above the prior month, but fell 8.92 percent below the year-ago month.

Last week's scheduled U.S. auto production of 143,904 units climbed 18.43 percent above the previous week and 2.42 percent above the year-ago week.

The week's scheduled car production was shared as follows: General Motors, 47.29 percent; Ford Motor Co., 23.74 percent; Chrysler Corp., 10.70 percent; Honda of America Manufacturing Inc., 6.13 percent; Toyota Motor Manufacturing U.S.A. Inc., 3.05 percent; New United Motor Manufacturing Inc., 2.92 percent; Mazda Motor Manufacturing Corp. U.S.A., 2.77 percent; Diamond Star Motors Corp., 1.97 percent; Nissan Motor Manufacturing Corp. U.S.A., 1.09 percent; and Subaru-Isuzu Automotive Inc., 0.34 percent.

GM scheduled Saturday overtime at the Lordstown, Ohio, and Baltimore car plants last week.

GM's Arlington, Texas, plant remains idle for changeover to the 1991 Caprice.

Ford scheduled daily overtime last week at the Wixom, Mich., and Wayne, Mich., plants and at all truck plants except Michigan Truck. Saturday overtime was scheduled at the Kansas City, Mo., and Louisville, Ky., truck plants.

Chrysler's Newark, Del., and Sterling Heights, Mich., car plants slated Saturday overtime last week as did two truck plants — Dodge City in Warren, Mich., and St. Louis No. 2.

Canadian cars reach '90 peak

Canadian automakers produced 104,958 cars in May, the highest monthly production in 1990. Production was 26.14 percent above April and 14.38 percent above May 1989.

Canadian truck production for May was 86,000, 5.14 percent below 1989's record high of 90,661 and 11.25 percent above April's 77,300.

Last week's estimated auto production was 25,240, 1.97 percent below the prior week and 33.39 percent above the year-ago week.

Truckmakers targeted output of 19,402 units last week, 1.98 percent over the previous week and 7.93 above the same week a year ago.

Chrysler's Bramalea, Ontario, facility closed May 25 because of slow sales. It is expected to resume production July 3. The plant was previously down for five weeks in March and April.

"What I've done all my life in the car business and in racing is take advantage of opportunities," says Rick Hendrick.

THUNDERING SUCCESS

Rick Hendrick steers 1 flick, 31 dealerships and 4 racing teams, but he's still in the pits

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

CHARLOTTE, N.C. — On a steamy Sunday afternoon, J.R. Hendrick III is exactly where he wants to be. In the pits.

In the pits of the Charlotte Motor Speedway, with headset strapped over his Chevy cap, Hendrick is acting crew chief for his NASCAR racing team. But this isn't your run-of-the-mill crew guy.

By 8:30 a.m. Monday, a suit-clad Hendrick, 40, is chairing the executive meeting of Hendrick Management Corp., of which he is sole owner. The holding company owns 31 dealerships, a motorsports operation, sportswear company and various parcels of real estate.

One of the nation's largest auto dealers, Hendrick presides over an auto retailing chain that is expected to ring up about $850 million in sales this year, selling more than 60,000 vehicles. Within the next year or so, he will add three Saturn locations, making him one of the largest dealers for General Motors' newest franchise.

But this isn't your run-of-the-mill super-dealer, either.

Later in the week, Hendrick jets to Los Angeles for an interview with "Entertainment Tonight" concerning the soon-to-be-released movie, *Days of Thunder*. Hendrick served as technical adviser on the stock-car racing movie starring Tom Cruise and ended up a prototype for one of the film's characters.

Back in Charlotte later that week, Hendrick oversees preparations for a major Winston Cup NASCAR race. He has four NASCAR teams.

Despite the frenetic pace, the man whom everyone knows as just "Rick" remains the same calm, down-to-earth guy that friends knew in the days before fame and fortune struck.

Says Hendrick in a gentle Southern drawl: "I'm just one of the guys. I'm one of the guys in the car business and one of the guys with the racing teams." Now he's one of the guys in the movies.

It began four years ago when Hendrick took Tom Cruise and Paul Newman, both race car drivers and actors, to tracks in Charlotte and Daytona Beach,

Chevy cuts Ford sales lead; surge by Geo is big factor

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Chevrolet is counting on some rookie car models to prevent crosstown rival Ford Division from winning its fourth consecutive World Series of Sales.

Ford dethroned Chevy as the nation's car-truck sales champion in 1987 and repeated in 1988 and 1989. Chevy figures that's more than enough.

Explorer gaining on Blazer, Page 43

But based on the first five months of this year, the 1990 contest will probably go down to the wire.

Chevrolet has taken the lead in car sales with its fresh Geo line and a surge by the year-old Lumina. Ford's big lead in light trucks has only partly compensated for lost sales of the Escort during model changeover and falling sales of most other Ford nameplates.

Ford Division's solid lead has dwindled. As of May 31, its total vehicle sales were 1,174,572, compared to 1,153,777 for Chevy.

The current 20,795-vehicle Ford lead is a far cry from the 143,282-unit advantage it held at this time last year.

And Ford's lead is all on the light-truck side, where it has an edge of 51,088. In car sales — domestics and captive imports combined — Chevrolet has a lead of 30,293 where a year ago May it was behind almost 80,000.

Chevy General Manager Jim Perkins will not predict when, or if, Chevy will regain the overall lead, but he said the division does have a game plan.

"Our whole idea about life at Chevrolet is to play offense, not defense," he said. "In this day and age, you cannot play catch-up or play defense."

Chevy has either narrowed the gap or taken the sales lead in nearly every category. The biggest

Chrysler's split with Renault over JJ could open door to Fiat, or someone

By Mary Connelly and Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTERS

The unraveling of Chrysler Corp.'s relationship with Renault is expected to lead the U.S. automaker to make a global alliance with a new partner.

Chrysler and Renault said last week they have terminated the $500 million, 50/50 joint venture to produce and distribute a mini sport-utility code-named JJ.

Italy's Fiat Auto S.p.A. is considered within the industry as Chrysler's most likely new partner.

Advertising Age, a sister publication of *Automotive News*, reports today that Chrysler and Fiat are currently involved in "intense negotiations." The publication did not specify the nature of the talks.

Spokesmen for Fiat and Chrysler would not confirm any new meetings between the two companies.

Speculation within the industry has ranged from the possibility of Fiat taking an equity stake in Chrysler to the two automakers making distribution and product-development agreements in North

see CHRYSLER, page 44

Chrysler-Renault relationships
Renault has exclusive sales and distribution right for Jeeps in France, Italy, Spain and Portugal.
Chrysler buys Renault components, including engines, for Eagle Premier and Dodge Monaco built in Bramalea, Ontario. Will sell at least 300,000 cars by 1992 or pay penalty.
Terminated joint ARCAD venture to build the JJ mini sport utility in Valladolid, Spain and Toledo, Ohio. Chrysler may do vehicle on its own at Toledo.

24-hour production — the next step

Europe's automakers hope to build on GM's success in Spain

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — European carmakers are turning to round-the-clock assembly to boost capacity without adding greenfield plants that could become white elephants when Japanese makers have free rein in Europe.

General Motors, which two years ago launched in Spain what was then the world's only 24-hour operation, now plans to add third shifts to at least two more European car plants. In addition, Automobiles Peugeot is discussing night shifts with unions at two French plants.

Labor relations breakthroughs in Europe are making triple-shifting possible. Volkswagen AG, Regie Nationale des Usines Renault S.A. and Rover Group have reached night-shift agreements with unions this year.

Fiat Auto S.p.A. is considering three-shift operations — principally at its two assembly plants near Turin — but has not begun discussions with local unions.

Last week, GM's Corsa supermini plant in Zaragoza, Spain, was

Brazil awaits rules

President's 5-year plan due this week

By Rik Turner
STAFF CORRESPONDENT

SAO PAULO, Brazil — Rules covering the auto industry will figure prominently in President Fernando Collor de Mello's announcement June 23 of his government's industrial policy for the next five years.

The president will make a keynote policy statement, laying out the guidelines for the administration's plan to open and modernize the economy between now and December 1994, when his term in office ends.

June 23 marks Collor's first 100 days in office. It has been an eventful period for the auto industry, starting in mid-March when the government froze $110 billion worth of deposits and investments.

The liquidity squeeze caught the industry with 30,000 vehicles in stock and led to workers being put on paid leave for six weeks.

But the squeeze also led to a spate of dealer markups — illegal in Brazil — on some cars. An irate Collor responded by opening the market to imports for the first time since 1976. While the government set an import tax of 85 percent, it threatened to reduce it if mark-ups did not disappear.

Collor's bold efforts at tackling Brazil's economic problems has led to an unprecedented level of interest by major automakers in establishing manufacturing facilities in the country.

Toyota Motor Corp. is considering a major expansion of its small facilities, Peugeot S.A. was reviewing prospects in Brazil last week and delegations from Nissan Motor Co. and Regie Nationale des Usines Renault S.A. are due shortly.

The government came under intense lobbying to find an outlet for the 30,000 cars in the makers' yards. It responded by freeing $800 million to $900 million in blocked funds belonging to the *consorcio*, the consumer pools responsible for about 40 percent of new-car sales in Brazil.

Prior to the Collor Plan, industry had geared up to produce mainly more sophisticated versions of each model, including large numbers with optional extras, as a way of upping unit value.

"The industry's yards were full of luxury models that traditionally have a slower turn-around," commented Romulo Monteiro Filho, president of the Volkswagen dealer association.

The consortia, on the other hand, buy no-frills standard versions.

The industry took 30,000 orders from the consortia and received the unblocked payment. But it sold the majority of its stocks to the dealer networks, going so far as to offer

SALES DIP: *Big 3 can't sustain late-May upturn*

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

U.S. car sales continue to seesaw.

While late May brought sales increases for all domestic and Japanese transplant automakers, the first 10 days of June were not so fruitful.

In the early June period, which had eight selling days compared with nine last year, 241,953 vehicles were sold, a 22.59 percent decline from last year. Car sales numbered 149,813 and were down 24.66 percent. Truck sales totaled 92,140, off 18.96 percent.

Because of the difference in the number of selling days, the combined daily selling rate for cars and trucks dipped 12.91 percent.

The Big 3 automakers experienced substantial car-sales declines, while all the transplants were up.

Chrysler Corp.'s car sales dropped 25.99 percent. Only its Chrysler marque posted an increase.

Dodge Division was down the most with a dip of 41.92 percent. Dodge Daytona sales slipped 66.19 percent. Only 201 Eagle Premier models were sold in early June, an 83.87 percent slide from last year.

Ford Motor Co. and General Motors were down more than Chrysler on a percentage basis. Ford's cars sales declined 26.99 percent, and GM's slid 29.08 percent.

Cadillac was GM's only gainer at the divisional level. Pontiac's sales tumbled the most — 37.45 percent. Every Pontiac nameplate shared in the sales decline.

Chevrolet's Geo Prizm remained strong with 33.10 percent more sales than in the same period last year.

Every Ford Division nameplate reported lower sales figures. The Lincoln Town Car was the only Ford Motor line to post an increase.

There were 8 selling days in the period this year and 9 last year.

Mitsubishi, up 41.32 percent, had the biggest gain among the transplants. The other Japanese makers that build cars in the United States reported sales increases of 9 percent to 20 percent for early June.

Sales of light trucks declined for each of the four manufacturers that produce those vehicles in the United States. The dips amounted to 10.14 percent for Nissan, 10.66 percent for Ford, 21.12 percent for GM and 28.08 percent for Chrysler.

Toyota studies assembly plant for Brazil

By Rik Turner
STAFF CORRESPONDENT

SAO PAULO, Brazil — Shinji Tomie, president of Toyota do Brasil S.A., confirmed that Toyota Motor Corp. is carrying out a feasibility study for a $1 billion plant to produce four-wheel-drive sport-utilities in Brazil.

The news came a few days before a heavyweight delegation from Peugeot S.A. arrived in Brazil to review possible production in the country. The Peugeot mission will be followed by similar tours by representatives from Nissan Motor Co. and Regie Nationales des Usines Renault S.A.

Toyota's idea is to produce vehicles for Brazil and other South American markets.

The capacity of Toyota's 4x4 plant would be 200,000 vehicles a year. The main condition, according to Brazilian automotive sector sources, is a reduction in the level of local content — currently 95 percent — to 70 percent.

Toyota is concerned that its imported components should include the on-board electronics which are now standard fittings in most models. Entry of these components is still prohibited by the country's protectionist legislation.

Tomie recently returned from a trip to Toyota in Japan, where he set up a deal to import 120 Crown sedans. The development follows the opening of the Brazilian market to imported built-up cars.

Peugeot met with Economy Minister Zelia Cardoso de Mello and Economy Secretary Joao Maia in the capital, Brasilia, last Monday and Tuesday. Their discussions centered on an initial plan to import built-up Peugeot 505s to Brazil. But the two sides also discussed a local assembly plant for the 405 as a second stage, and a full 405 production facility in the long term.

A Peugeot factory in Brazil is likely to involve close ties with its local assembler in Argentina, Sevel.

The Peugeot team was led by Bernard Montel, international affairs director; Luis Zureta Saenz Pena, director for Latin America; and Alain Fromageot, head of industrial programs.

2 Subarus slip through passive restraint loophole

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — So you thought all 1990 cars carried either an air bag or automatic seat belts? Well, think again.

Subaru of America Inc. has equipped its 1990 four-wheel-drive Justy and Loyale models only with three-point manual safety belts. That's because the cars are classified as multipurpose vehicles and therefore are not required to have passive restraints.

Subaru has not violated the federal rule mandating passive restraints on all 1990 passenger cars. Multipurpose vehicles are exempt from the passive-restraint standard.

But Subaru appears to be the only automaker to take advantage of what consumer advocates and safety experts call an obvious loophole.

"They may not be breaking the law, but they're violating the spirit of the rule," said Clarence Ditlow, executive director of the Center for Auto Safety. "It's an abuse of the rule, plain and simple."

The National Highway Traffic Safety Administration permits automakers to classify vehicles with off-road capabilities as multi-purpose vehicles. Four-wheel drive is among the criteria.

And even though they have multipurpose-vehicle status, the 4wd Justy and Loyale carry all other safety features required on cars.

A media spending chart in the Automotive News 1990 Market Data Book reported that Yugo spent $93,000 on advertising in 1989. A Yugo spokesman said 1989 advertising volume was $1 million. Data for the chart were collected from Leading National Advertisers in New York. Totals do not include spot radio or dealer advertising.

In the Market Data Book directory section, an outdated address and phone number were given for Automotive Helping Hand, a consultant firm. The new address and phone are: Automotive Helping Hand, Box 457, Casa Grande, AZ 85222. Phone: 602-426-3810.

Mignanelli's rise at Nissan may foreshadow trend

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Last week's appointment of an American — Thomas Mignanelli — as president of Nissan Motor Corp. in U.S.A Inc. could be the tip of the iceberg as other Japanese importers move to give their U.S. operations a more American look.

Europe's importers prefer own, Page 42

In promoting the 45-year-old Mignanelli from executive vice president of operations to president, effective July 1, Nissan becomes the first Japanese auto importer to give an American the presidency of a wholly owned U.S. sales and marketing arm. Mignanelli joined Nissan in 1987 as vice president of marketing, after spending 18 years at Ford Motor Co.

"Japanese sources have indicated to me that we'll see more American executives moved into top jobs because of the dominance of the importers' business in the U.S., and the need to be close to their immediate customers," says William Inglis, senior partner in the Los Angeles office of Korn/Ferry International, an executive search firm. "It's very much under consideration at each of the import companies here in the U.S."

J. David Power III, president of J.D. Power & Associates, an Agoura Hills, Calif., research firm, believes Mignanelli's appointment and others that may follow reflect the consumer-driven nature of today's market. "You have to cut the chain of reporting," Power says. "Those importers that rely on their own native people to make all the decisions about activities in foreign markets are going to find that they're falling behind."

Mignanelli replaces Kazutoshi Hagiwara, who's returning to Japan for an unspecified position with Nissan Motor Co. Ltd. Mignanelli will assume all Hagiwara's responsibilities for managing Nissan's day-to-day operations as well as charting Nissan and Infiniti sales strategies.

Mignanelli will report to Yoshikazu Hanawa, president of Nissan North America Inc., which coordinates 10 U.S.-based subsidiaries. Hanawa, who splits his time between Japan and Nissan North America headquarters in Torrance, Calif., is also chairman of Nissan

AUTOMOTIVE NEWS JOE WILSDEN

Maserati's U.S. lineup currently consists of three models based on the nine-year-old Biturbo: the 430, the Spyder and the 228. It reported 280 U.S. retail sales in 1989; its highest U.S. retail volume was 2,023 in 1984.

MASERATI: *U.S. sales dismal at 18 a month; Fiat may provide road to recovery*

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Maserati's presence in the United States has dwindled to next to nothing — about 18 sales a month.

Last January's rescue by Fiat has postponed immediate financial disaster, but additional benefits from the deal appear to be at least a couple of years away.

"We've had our ups and downs, but we've hit bottom, and now we're beginning to crawl again," said George Garbutt, executive vice president of sales at Maserati Automobiles Inc., the U.S. importer and distributor in Baltimore, which has 50 dealers.

Garbutt said he expects sales of about 225 cars for 1990. Through May, 89 were sold.

In 1989, Maserati sold only 114 cars to the U.S. importer, 4.3 percent of Maserati's worldwide wholesale volume. In turn, U.S. dealers bought 213 cars, largely from inventory.

The company reported 280 retail sales in the United States last year. Maserati's highest U.S. retail volume was 2,023 in 1984.

The sales famine has been felt at headquarters, where Maserati Automobiles has cut its U.S. work force from 56 in late 1988 to 22.

Fiat represents the best hope for recovery.

In January, Fiat Auto S.p.A. paid Maserati's parent company, DeTomaso Industries in Red Bank, N.J., about $61.8 million for 49 percent of Maserati S.r.L and the Maserati trade name. DeTomaso Industries now owns 42 percent of Maserati S.r.L., and Chrysler Corp. owns 8 percent.

Fiat also bought from DeTomaso 51 percent of the stock of Innocenti Milano S.p.A., which makes Innocenti minicars, and other DeTomaso assets for an additional $16.6 million.

For Fiat, the Innocenti deal provided additional manufacturing capacity, which will be used to make 30,000 Fiat Panda minicars annually. Fiat officials have said Innocenti was their main interest in the DeTomaso Industries deal, not Maserati.

But in the long run, Maserati hopes to benefit from Fiat's clout in purchasing, high technology and research and development.

Maserati S.r.L will work jointly with Fiat's Alfa Romeo on future

see MASERATI, page 26

Fiat deal was just in time for Maserati

AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Alejandro DeTomaso, the managing director of Maserati, had long thundered against an alliance with Fiat. But amid rumors last year that Japanese companies were negotiating for Maserati, the deal with Fiat was made.

Maserati — a famous but fading Italian marque — thereby joined Jaguar plc, Saab Car Division and AB Volvo as famed European names that lost at least a measure of independence through outright acquisition or by linking with larger companies.

Maserati badly needed a helping hand. The Fiat deal followed a decision by Chrysler and Maserati to scrap production of the Maserati-built Chrysler TC convertible at the Lambrate plant near Milan, Italy.

The luxury-performance maker's already anemic worldwide sales have been steadily declining since the mid-1980s. Sales have dropped from 6,274 in 1984 to 2,651 last year. Maserati production fell 20 percent to 647 cars in the first quarter of 1990 from 810 over the

CURRENCY D-DAY

East Germany's July 2 switch will push its industry into free-market competition

By Joseph Boho
AUTOMOTIVE NEWS STAFF REPORTER

LUDWIGSFELDE, East Germany — For East Germany, July 2 is "D-Day."

That's when East Germany adopts the West German mark, allowing its citizens to buy anything produced in the world, and automotive companies like VEB IFA Nutzkraftwagen Kombinat have to confront the realities of free-market competition.

To many East German workers worried about their jobs for the first time, communism never looked better. But to managers who must catch up with a half-century of global competition, communism is still a lingering nightmare. Western firms venturing into the East Bloc are finding a world of low productivity, out-of-kilter prices and inadequate distribution systems.

IFA's sprawling industrial complex dates back to World War II when Daimler-Benz built aircraft for Germany's war effort. Designed for self-sufficiency, the 9,000-employee IFA factory complex handles everything from research and development to final assembly. The company produces 85 percent of the value-added components of the trucks it assembles, including everything except its own rubber, electrical and glass products.

But parts are the major problem for the plant, which turns out 33,000 medium-duty trucks a year.

IFA operates only half as efficiently as a West German Mercedes-Benz plant, according to internal studies by the firms. A task that requires 50 Mercedes workers takes 500 at the East German company, according to IFA General Director Lothar Heinzmann.

The two have a partnership under which Mercedes will supply cabs for IFA's L60 model. Mercedes Vice Chairman Helmut Werner cautious about an eventual takeover of the firm.

Mercedes' first task will be helping IFA with its supply problems.

Under the Communist system, IFA received credits or entitlements to obtain certain materials and components, but it had to

see GERMANY, page 25

How the Reds cooked books

STUTTGART, West Germany — East German communism spawned a perverse kind of balance-sheet corruption, says Mercedes-Benz AG after an extensive study of Eastern European activities.

A company manager might tell his boss, the state minister, that it was a tough year, the competition was dirty and he had lost 100 million East German marks, says Mercedes Vice Chairman Helmut Werner.

The minister would tell the manager he was wrong: He actually made a profit of 500 million marks because he failed to consider the increase in his corporate assets. Under communism, fixed assets aren't depreciated — they're appreciated. The minister would write down 500 million marks.

The corporate manager, who still needed working capital for his business, would present the figure to the bank and get the money he needed. The state minister would then turn around and claim the 500 million marks as the state's because it was corporate profit.

Such tactics saddled East Germany companies with unfair liabilities and have led West German business leaders to insist that the liabilities be eliminated immediately after the economic integration of the two Germanys July 2.

Brazilian minivan killed; GM looks at other options

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

MONTE CARLO — General Motors has apparently abandoned its program for an Adam Opel-engineered global minivan that originally was to be sourced in Brazil and marketed in Europe and the United States.

GM is still bullish on the emerging minivan segment in Europe, but is considering other alternatives. The vehicle originally considered was a high-roof version of the next-generation Kadett. "That spe-

Mazda looks ahead

Mazda Motor Corp. sprang a surprise by showing this vision of a future multi-purpose limousine at the opening of its new $33 million European R&D Center in Oberursel, West Germany. Known as Gissya, the concept vehicle has a transverse-mounted triple rotor engine producing 275 horsepower, six-speed pre-selector gearbox, four-wheel drive and four-wheel steering.

Taiwan dawns as Shangri-La for Big 3, U.S. parts makers

By Glenn Smith
SPECIAL CORRESPONDENT

TAIPEI, Taiwan — This city may not be a well known venue for the debut of new vehicles, but the U.S. auto industry found a better reason to participate in the Taipei international auto show in mid-May.

"Taiwan has become one of the most important export markets for U.S. automakers," said Craig Allen, manager of the trade center of the American Institute in Taiwan and organizer of a contingent of U.S. exhibitors at the show.

"U.S. parts suppliers are also increasing sales rapidly," Allen added. "We are very bullish on this market."

Held at the Taipei Trade Center, the event attracted 303 exhibitors, of which 73 were foreign. U.S. automakers dominated the show, filling one-fourth of the 5.3-acre hall with an American pavilion manned by the Big 3 and 22 U.S. parts and accessory suppliers.

With Japanese and South Korean auto imports banned from Taiwan, U.S. and European makers are tapping a growing market on this island of 20 million.

Passenger vehicles in operation in Taiwan reached 1.87 million last year, double the 956,000 of 1986. New-car sales in 1989 totaled 368,000, and 42 percent were imports.

U.S. automakers are emerging as the chief beneficiaries of the trend. They sold 54,000 cars in Taiwan last year, more than the combined sales of U.S. passenger cars in South Korea and Japan. The GM and Ford totals include a number of vehicles made in West Germany and Brazil.

According to a study by the American Institute in Taiwan, vehicle imports will grow 25 to 30 percent annually for the next five years. Foreign models are expected to account for more than 50 percent of Taiwanese car purchases by 1992. The U.S. share is forecast at 110,000 vehicles.

That optimism was echoed by American exhibitors in the aisles of the Taipei show.

"Next year will be a strong one for U.S. cars," said Arthur Lee, sales and marketing manager of Chrysler Corp.'s international business office in Taiwan. The subsidiary opened in October 1987 to oversee the sales effort of three local distributors.

Exposure at the exhibition will help Chrysler increase sales on the island to 8,500 units this year from last year's 4,500, said Lee.

There are other reasons as well, he said. First, the Taiwanese are flush with cash after decades of saving their earnings. Further, during the late 1980s, many consumers enjoyed enormous capital gains from stock and real estate booms. Spending power is at an all-time high.

Trade friction also has been a factor. In response to U.S. pressure, the Taiwanese dollar has appreciated from 41 to the U.S. dollar in 1986 to a high of 25 last year. Import duty on passenger cars was cut in January 1988 from 55 to 48.5 percent, in accordance with the government's Auto Industry Development Program.

The duty was reduced again last January to 40 percent and is scheduled to drop to 30 percent in 1991. "That (last cut) will mean a 7.1 or 7.2 percent reduction in retail price," said Lee.

"The sale of GM cars took off in 1986," said Frank Lien, advertising and promotion manager of GM Taiwan Inc. "The market (here) for American cars was not really that significant until three years ago."

Like Chrysler, GM is bolstering long-established Taiwan market channels by forming a local subsidiary of the U.S. parent. Established last August, the 15-person operation is responsible for parts, distribution and marketing through 200 sales outlets of its distributors. According to Lien, GM Taiwan sold 34,000 cars last year, including its Brazilian pickup (GMT 500) and the West German Opel Kadett.

> "The market for American cars was not really that significant until three years ago."
>
> **Frank Lien**
> GM Taiwan Inc.

That import figure surpassed that of Ford Lio Ho, which last year imported 15,548 American-made Sables and West German-made Scorpios and Sierras. But for Ford's Taiwanese operation, that was merely a bonus.

Ford Lio Ho was founded in December 1973 and has become the island's largest automaker. Last year, it sold 94,553 Taiwan-made (50 percent local content) passenger cars on the island.

In 1988, Ford Lio Ho surpassed the former leader, Yue Loong, which is 25 percent owned by Nissan Motor Co. Ltd. Ford Lio Ho had 31.4 percent of sales of Taiwanese vehicles last year compared with Yue Loong's 20.8 percent.

Ford Lio Ho's success in the local market hides its recent failure to sell its Taiwan-made Mercury Tracers in Canada.

From 1986 to 1988, 17,000 Taiwan Tracers were exported to Canada, but the appreciation of the Taiwan dollar ended the program.

Yue Loong, too, failed to develop its planned export program for the Feeling 101 model.

Together, Ford Lio Ho and Yue Loong produced 52.2 percent of the Taiwan-made vehicles sold on the island last year. The remaining sales of Taiwanese vehicles — 149,863 units — were divided among eight automakers.

All are joint ventures with foreign makers. They are China Motor and Mitsubishi Motors Corp.; San Yang and Honda Motor Co.; Yue Tyan and Daihatsu Motor Co. and Automobiles Peugeot; Sanfu and Regie Nationale des Usines Renault; Kuo Ziu and Toyota Motor Corp.; Chinese Automobile and Automobiles Citroen; Tai Ching and Fuji Heavy Industries; and Prince Motor and Suzuki Motor.

That makes the persistent rumors that GM is considering assembly operations here all the more surprising. Two years ago, the reports linked GM with Yue Loong. They were replaced last fall by tales of negotiations for a $100 million joint venture with Chinese Automobile Co.

"You can read at least seven or eight different stories in the papers about our prospective partners," said Lien, "But there has been no official announcement about local assembly, so how could we have chosen (a partner)?"

Observers here find it hard to understand why GM would want to invest in manufacturing in Taiwan. While the Taiwanese market is growing, it is small and already crowded. In addition, export efforts by Yue Loong and Ford Lio Ho failed.

One factor in Taiwan's favor is greatly strengthened commercial links with mainland China. The government in Taipei has been progressively opening indirect business channels with China.

Last year, indirect two-way trade between Taiwan and China was worth $4 billion, and Taiwan companies have invested — via third countries — more than $1 billion on the mainland. Taiwanese carmakers — including Yue Loong and Sanfu — are conducting feasibility studies for mainland joint ventures in manufacturing, sales and service.

The question being considered here is whether Taiwan could some day be the gateway to China for Western multi-nationals. That is a topic discussed in just about every industry here these days, and the auto industry is no exception.

Taiwan industrialists are dreaming of a China Triangle of Taiwan, Hong Kong and China, potentially the world's largest market and a counterweight to any protectionist trends in the United States and the European Community.

INDIA: *New foreign ownership rules help whet makers' appetites*

By Sadananda Mukherjee
SPECIAL CORRESPONDENT

NEW DELHI, India — The world's automakers are on the lookout for suitable Indian partners to set up projects. This follows changes in government regulations that would make investment in the country more attractive to overseas companies.

Among those believed to be seeking an entry are Mercedes-Benz AG, BMW AG, General Motors, Volkswagen AG and AB Volvo.

Their interest follows the success of Maruti Udyog Ltd., which has built a tie-up with Suzuki Motor Co. of Japan.

Raunaq Singh, chairman of the Raunaq Group and president of the Federation of Indian Chambers of Commerce and Industry, is a potential collaborator. He claims to have had talks with BMW, GM and VW on possible manufacturing links.

GM has also had some dialogue with C.K. Birla of Calcutta-based Hindustan Motors, manufacturer of Ambassador and Contessa passenger cars. Unconfirmed reports claim one of the Modis group of companies has been in touch with Volvo.

None of the Indian promoters has so far made any collaborative application to the government.

The government's just-announced industrial policy allows automatic increases in foreign ownership of Indian companies up to 40 percent, based on the condition that effective technology transfers take place.

But a stipulation has been placed on imports of capital goods. It specifies that the landed value of capital goods should not be more than 30 percent of a project's entire cost in terms of plants and machinery.

Ajit Singh, the minister for industry, said new policies covering the Monopolies and Restricted Trade Practices and Foreign Exchange Regulation Act will be announced soon.

Head injuries a risk in Ranger, Prelude crashes

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Drivers of a Honda Prelude or Ford Ranger 4X4 would "likely" suffer head injuries in a head-on accident at 35 mph, the government said.

But Ranger passengers are "unlikely" to receive head injuries in such a crash, according to the National Highway Traffic Safety Administration. Prelude passengers scored in the "possible" head injury range.

Under NHTSA's New Car Assessment Program, numbers below 750 indicate that head injury is unlikely; between 750 and 1,250, head injury is possible; and above 1,250, head injury is likely. For the crashes, a vehicle is driven into a barrier at 35 mph.

The Prelude had a 1,279 driver-side score and 854 for the passenger.

Ranger is the only 1990 light truck crashed so far. It had a driver-side score of 1,270 and passenger score of 736.

The Ford Mustang convertible, classified for comparison with other vehicles weighing 3,500 pounds or more, placed in the "unlikely" injury range for driver and passenger.

The Mercedes-Benz 190E, classified in the same 3,000 to 3,499 pound category as the Prelude, had driver and passenger scores in the "possible" range.

NHTSA said comparisons are meaningful only when made between vehicles of the same type and within an approximate weight range of 500 pounds.

Head injury potential

Interest rates hobble Canadian vehicle sales

By Steve Meril
SPECIAL CORRESPONDENT

VANCOUVER, British Columbia — Canadian interest rates are at their highest level since the early 1980s, dampening an already dismal year for domestic automakers and dealers.

Government inflation-fighting policies and ongoing constitutional problems — linked to fears of renewed Quebec separatism — have kept lending rates high.

The key Bank of Canada prime rate reached an eight-year high of 14.05 percent in mid-May, easing to 13.72 percent early this month. That compares with an average of 9.64 percent in 1988 and 12.20 percent last year.

Canadian car and truck sales rose 2.5 percent in 1988 and dipped 5.2 percent the following year. Through April, they were down 8.2 percent from year-ago levels.

A forecast by the Royal Bank, Canada's largest financial institution, predicts the Bank of Canada prime rate will average 13.59 percent this year and drop marginally in 1991.

Borrowing costs and recession worries have stiffened consumer resistance when the Big 3 automakers can least afford it. For years they have been fueling sales through costly incentives.

"They're approaching the bottom of the well just when the well should be full of water," said John Winter, a Toronto retail marketing consultant and president of John Winter Associates Ltd.

Bank consumer loan rates typically range from 14.75 percent to 16.5 percent. That makes incentive financing even more important, but the automakers are being forced to support their programs on a lower sales base.

Even during the 1981-1982 slump, when lending rates soared into the 20 percent range, high rates didn't last as long, said Jack Clissold, vice president of sales and marketing at Ford Motor Co. of Canada Ltd.

"It's not so much the rate but the sustained level of the rate that bothers us," he said.

Low interest financing is more popular with Canadian consumers than cash rebates.

Dealers, too, are balking at the higher floorplanning costs — financed at 1 percent over bank prime, said Clissold. A 15 percent prime rate would be a dangerous psychological barrier for both dealers and consumers, he said.

General Motors of Canada Ltd. is offering 9.9 percent financing over 48 months on a wide range of products. Paul Sullivan, the company's director of business strategy, said GM's own cost of money has climbed 2 percent since the latest program began.

Sullivan couldn't supply precise incentive costs but estimated that for an average customer financing $11,500 to $12,000 over 48 months, the 9.9 program currently costs GM between $1,200 and $1,300.

Chrysler Canada Ltd. declined to talk. "It creates a further negative atmosphere," said spokesman Walter McCall.

Import nameplates continue to outperform domestics despite fewer customer incentives, but dealers believe like they are peering over a precipice, said Brian Caldwell, executive director of the 1,016-member Canadian Association of Japanese Automobile Dealers.

"You take another step and you haven't fallen off yet," said Caldwell. "Every point (rise in interest rates) takes people out of the marketplace. Everybody's definitely afraid of next month."

Car inventories rise

But domestic supply remains at 60 days

By Karen Dellowski
AUTOMOTIVE NEWS STATISTICIAN

Domestic new-car inventories rose slightly during May, but the days' supply on June 1 was 60 days, the same as a month earlier.

Automakers and dealers continue to keep car inventories in line with this year's slow sales pace. The June 1 stockpile of domestic cars rose 3.40 percent to 1,470,537 units from 1,422,136 on May 1. A sales spurt in the last 10 days of May left inventories balanced at month-end.

On June 1, importers had 657,371 cars in stock, the equivalent of a 74-day supply. The stockpile was down 22,509 units from May 1, and the days's supply dipped from 82.

Combined June 1 inventories of domestic and imported new cars at dealerships, enroute to them or on factory lots totaled 2,127,908, a 63-day supply, compared to 2,102,016, a 65-day supply, on May 1. On June 1, 1989, the stokpile of 2,505,689 domestic and imported cars represented a 67-day supply.

Total industry car sales in May were off 9.48 percent from 1989.

Of the Big 3, Ford Motor Co. reported the biggest increase in days' supply — 70 days on June 1, up from 59 a month earlier.

Ford's total car sales fell 20 percent in May, causing an increase in the days' supply of 11 days for Ford and 12 days for Mercury. Lincoln was up six days. The June 1 figures were 72 days for Ford, 71 for Mercury and 60 for Lincoln.

The Ford Probe, which had been carrying a 100-plus days' supply since the beginning of this year, dipped to a 61-day supply.

General Motors' car inventory remained steady, inching up to 63 days from 62 on May 1.

Chevrolet and Cadillac were the only GM car divisions to reduce their days' supply. Chevrolet stocks were down to 55 days from 59 on May 1. Cadillac, which last month held the highest days' supply of any GM car division, reduced its inventories to 63 days from 74.

A key factor for Cadillac was the depletion of Sevilles from 54 days last month to 18 days on June 1.

Oldsmobile 88 and 98 models increased to a 113-day supply, up from 79 days and 82 days.

Other GM models with supplies of more than 100 days on June 1 were Buick Electra and Reatta, Cadillac Allante, Oldsmobile Cutlass Supreme and Pontiac Bonneville.

Chrysler Corp.'s total stockpile dipped to a 60-day supply from last month's 77. All Chrysler divisions shared in the reduction.

The company's highest days' supply was 280 for the Dodge Monaco, but that was down from 294 on May 1.

Other Chrysler models with more than a 100-day supply were Eagle Premier and Chrysler Imperial, but both were lower than on May 1.

Among the Japanese transplants, Honda, Mitsubishi and Subaru reduced their days' supplies during May, although the Subaru figure was 335 days. Mazda was up for the month, and Nissan was unchanged.

On the import side, stocks of Japanese cars dipped to 57 days from 72 on May 1; West German cars dropped to 92 days from 100; and cars from other lands fell to 74 from 85.

Supplies of imported trucks fell to 49 days from 53 on May 1.

MIGNANELLI

FROM PAGE 3

Motor Corp. in U.S.A.

The creation of Nissan North America earlier this year paved the way for Mignanelli's promotion. The move created an umbrella organization with Japanese management that can oversee the activities of individual subsidiaries. Nissan's next largest subsidiary, Nissan Motor Manufacturing Corp. U.S.A. in Smyrna, Tenn., is also headed by an American, Jerry Benefield.

"This is part of our global strategy to think globally and act locally — all over the world. In order to act locally effectively, you should have an American president," says the departing Hagwara. He has been in the United States five years, "the normal tenure" for a Japanese executive in the United States.

Whether other companies follow suit depends on a number of factors, including their management structure, the ages of its executives and the tenure of U.S.-based Japanese presidents.

"More companies may follow this pattern as they get more Americanized with assembly operations here and less dependence on imports, but we don't have any plans like that at this time," says Dick Recchia, executive vice president/general operations of Mitsubishi Motor Sales of America Inc.

A spokesman for American Honda Motor Co. Inc. says the company has no plans to name an American president. "Traditionally the president has been Japanese, but there's no policy or law that says that's the way it has to be. Fundamentally, though, we don't think nationality is that important."

Subaru of America Inc. has had Americans at its helm since it began selling cars in the United States in 1968. But unlike its peers, Subaru has operated as a publicly traded company and has been 49.6 percent owned by Fuji Heavy Industries Inc. Fuji has agreed to buy the rest of Subaru.

Europeans tend to bypass Yanks

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Among European importers, only the two Swedish companies have Americans in charge of their U.S. import operations. The major German, French and British importers are run by Europeans.

Joseph L. Nicolato, president of Volvo Cars of North America is the dean of European import executives.

A native of Newark, N.J., Nicolato has been in charge of all Volvo automobile operations here and in Canada since 1981.

"The Swedes feel that the person in charge of marketing cars in a market should be a national," said Volvo spokesman Robert C. Austin.

Nicolato has a direct line to the parent company in Sweden, but he also reports to Bjorn Ahlstrom, president and chief executive officer of Volvo North America Corp. A Swede, Ahlstrom has been in the United States since the early 1970s and has become a U.S. citizen, Austin said.

Saab-Scania of America Inc. is headed by President Robert J. Sinclair, a native of the Philadelphia area. Sinclair worked for Saab from 1958 to 1962, when he switched to Volvo. He rejoined Saab in 1979.

The top ranks of the European importers include many lieutenants who are either Americans or are Europeans who have lived in this country long enough to be considered "lifers."

Mercedes-Benz is an example. Erich Krampe, a native German with experience at Mercedes subsidiaries in England and in Eastern Europe, has been president of Mercedes-Benz of North America Inc.since 1987.

Presidents or European importers also tend to have experience with the export side of the parent company's business. An example is Hans-Jorg Hungerland, president of Volkswagen of America Inc. He was Volkswagen AG's export sales manager before coming to the United States in 1989. And he gained first-hand experience with the U.S. market from 1980 to 1983, when he was VWoA's corporate service manager.

BRAZIL

FROM PAGE 2

discounts which virtually annulled profit margins, in order to clear the yards.

The industry effectively invoiced for 60,000 vehicles when it was delivering only the 30,000 it had. That led to shortages, particularly of standard models, and illegal mark-ups began to creep in.

The concession to the consortia, while it enabled the auto industry to liquidate its stock and adjust its cashflow, meant the cash generated by sales to dealers stayed in the economy rather than being used to pay taxes and suppliers.

The industry has now largely recovered from the heavy hit of the Collor Plan. Brazilian sales in May rebounded, and export volumes, while down on the previous year, remained relatively stable throughout the upheaval.

Inflation, which reached 85 percent in the month of March, has been cut — but not to the zero which Collor forecast. This month it is expected to be higher than May's 8.5 percent.

Without revealing details of Collor's forthcoming package, Economy Secretary Joao Maia said the amount the automotive sector will be allowed to import each year will be calculated as a proportion of its exports. Tax on built-up imports will be based on factory prices in the country of origin "to avoid under-invoicing," said Maia.

More seriously, Maia hinted that domestic car manufacturers might be barred from importing built-up units. That would mean only other companies and, possibly, private individuals would be able to bring in autos.

What the industry does not want is legislation allowing third parties to close import deals with foreign automakers, particularly the highly competitive Japanese.

Imports could represent a real threat to local industry, especially if, as promised, the government starts to reduce the import tax. "At that point, we close down the plants and go home, and I don't believe that's what the government wants," commented the president of the industry association, Jacy Mendonca.

The export volume indicates an ongoing malaise in Brazil. The country dispatched 90,692 units in the first five months of the year, only 4.2 percent down on the 94,656 of the same period last year.

But by value, the January-May total was down 14.7 percent, from $119.6 million last year to $102 million this. This diminishing competitive edge stems from an overvalued Brazilian currency, which obliges manufacturers to increase dollar prices to cover costs.

The government has been holding down the dollar rate since the Collor Plan, enabling the Central Bank to buy hard currency cheaply and accumulate reserves. The present rate discourages exports and stimulates imports.

The government in Brasilia may need to reverse that situation in the second half of the year in order to generate trade surpluses, particularly if it reaches any kind of agreement with its foreign creditors on debt service payments.

All the turmoil showed how crafty the industry was in managing its stocks, labor and financial assets. Its year-end financial prospects are by no means as bleak as were anticipated at the start of the Collor Plan.

For the second half of the year, expected exchange rate changes should favor the auto market, which is recovering some of its buoyancy in keeping with the rest of the economy.

Ethanol use hits the skids

This country's great energy-saving adventure with sugar cane-derived alcohol fuel looks all but over.

President Fernando Collor de Mello recently declared that if he were buying a car, he would opt for one with gasoline power.

His infrastructure minister, Ozires Silva, who controls energy policy, barely hides his dislike of alcohol fuel. It costs more than twice as much as gasoline to produce, but must be sold at lower prices to compensate for its poorer performance as a fuel.

In May, alcohol-powered cars represented just 13.6 percent of total sales, the lowest monthly average since the beginning of the 1980s. Just one year earlier, alcohol cars accounted for 58.9 percent of Brazilian new-car sales.

The situation is the result of the supply crisis in the sugar cane alcohol, or ethanol, that powers some 4.5 million vehicles in the country.

The problems date from the end of the last decade, when the government of then-President Jose Sarney allowed alcohol production to run down as cane growers switched to export in the wake of high world prices for sugar.

The Brazilian government introduced the alcohol transport program in the late 1970s.

Steady week for output of cars, trucks

By Karen Dotkowski
AUTOMOTIVE NEWS STATISTICIAN

Last week's estimated domestic auto production inched above the prior week's, but truck output dipped slightly.

Weekly production is holding steady in the second quarter as producers contend with slow sales.

Last week, automakers scheduled 146,054 cars, 0.37 percent above the prior week and 2.45 percent above the same week a year ago.

Year-to-date car production is 2,899,802 units, 18.72 percent below the year-ago total.

Truck output was estimated at 93,209 units last week, 1.70 percent below the previous week, but 3.86 percent above the same week last year.

Last week's targeted car output was split among manufacturers as follows: General Motors, 46.50 percent; Ford Motor Co., 23.59 percent; Chrysler Corp., 11.78 percent; Honda of America Manufacturing Inc., 6.13 percent; Toyota Motor Manufacturing U.S.A. Inc., 3.01 percent; New United Motor Manufacturing Inc., 2.94 percent; Mazda Motor Manufacturing Corp. U.S.A., 2.72 percent; Diamond-Star Motors Corp., 1.92 percent; Nissan Motor Manufacturing Corp. U.S.A., 1.07 percent; and Subaru-Isuzu Automotive Inc., 0.34 percent.

Chrysler announced that it will begin capital improvements totaling $17.7 million at its Newark, Del., and Sterling Heights, Mich., plants in July.

The company will add a "hot car concept," which supplies electrical power to vehicles as they move through the assembly process to verify performance of electrical systems. The plant upgrades will affect 1991 models built at the two facilities.

Ford scheduled daily overtime last week at the Wayne and Wixom, Mich., car plants, and at all truck plants except Michigan Truck. Saturday overtime was slated for the St. Louis truck plant.

GM scheduled Friday overtime at the Janesville, Wis., Cavalier plant.

Saturday overtime was scheduled for GM's Detroit-Hamtramck, Mich., plant and Lansing, Mich., A-line facility and at the Pontiac (Mich.) West and Moraine, Ohio truck plants.

Canada trucks highest of 1990

Last week, Canadian truckmakers scheduled their highest weekly output of this year — 21,139 units, 8.36 percent above the previous week and 0.05 percent above the year-ago week.

For the year to date, 436,494 trucks have been assembled, 9.02 percent below last year's total at this time.

Canadian automakers scheduled 26,458 cars last week, 4.98 percent above the prior week and 12.77 percent above the year-ago week.

So far this year, 493,501 cars have been produced, 2.51 percent above year-ago output.

Dealers face tax grief on service contracts

Entire price may be income, IRS maintains

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

The Internal Revenue Service is socking auto dealers with hefty tax bills, saying they owe back taxes and interest on the sale of some kinds of extended service contracts.

For some dealers the tab is in the hundreds of thousands of dollars. The IRS apparently is focusing on dealers selling extended warranties from either Ford Motor Co. or independently administered programs. As a matter of policy, the IRS does not discuss individual taxpayers or groups of taxpayers.

Ford is assisting dealers being audited by providing them with accounting information on the extended service contracts their dealers sold.

CONTRACT Casualties

Robert Zwiers, Motor Vehicle Industry Specialist for the Internal Revenue Service in Grand Rapids, Mich., confirmed that the IRS is taking a hard look at extended warranties nationally — and not only vehicle extended warranties — but all types.

The IRS position is that when a dealer is the principal on an extended warranty, rather than simply an agent for another company, the entire price paid by the retail customer must be treated as income, and costs must be deducted over the life of the contract.

The IRS apparently views a principal as a dealer who enters into an agreement with the retail customer for themselves. In other words, if it is between the customer and the dealer as opposed to the dealer acting on behalf of someone else.

Dealers audited by the IRS are skittish about discussing the issue publicly because they are appealing their tax bills.

But they blame the Bush administration's stand against tax increases, saying the IRS is raising revenues by finding new ways to

Calibra is based on GM Europe's front-wheel-drive Opel Vectra and Vauxhall Cavalier.

BOOST FOR SAAB: *U.S. dealers may sell rebadged Opel Calibra*

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

MONTE CARLO, Monaco — Saab Automobile's beleaguered North American dealers will likely get a Saab-badged version of General Motors Europe's new Calibra coupe, *Automotive News* has learned.

Hot sales forecast for Calibra, Page 17

The Calibra, which is being introduced in Europe this month after a much-praised debut at last fall's Frankfurt auto show, could give a needed boost to Saab's American network.

Sources at Adam Opel AG, GM's West German subsidiary, and Saab Automobile confirm that the plan is under serious consideration. A decision is expected within six months. Insiders say they expect it to be approved.

The export models would come from the Saab-Valmet plant in Uusikaupunki, Finland, that next spring will be used to

Jeep-Eagle dealers demand a minivan

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

A product slugfest at Chrysler Corp. has Jeep-Eagle dealers demanding a version of Chrysler's minivan by Jan. 1, 1991 — and Dodge and Chrysler-Plymouth trying to fend them off.

"We need product, and we need it as soon as possible to sustain ourselves in a difficult market," said Paul Fournier, chairman of the Jeep-Eagle National Dealer Council, who confirmed the product request.

Countered Rick Tomkinson, chairman of the Chrysler-Plymouth National Dealer Council: "You can't have one division going into another division's pantry. Jeep-Eagle just can't go cherry-picking everybody's inventories."

Added Ken Meade, chairman of the Dodge National Dealer Council: "The Dodge dealer council thinks giving the minivan to Jeep-Eagle is a franchise breaker. We think it is a dilution of the Dodge product line."

For the first time, Jeep-Eagle dealers are also asking for a version of the A-body Dodge Spirit/Plymouth Acclaim/Chrysler LeBaron sedans.

The dealers also want Chrysler to kill the Jeep Comanche and replace it with a version of the Dodge Dakota pickup by the spring of 1991.

"A spring 1991 introduction of a short-wheelbase, long-wheelbase, regular and extended cab Dakota is needed immediately for Jeep and Eagle survival," said one Jeep-Eagle dealer source.

Jeep-Eagle dealers are also adamant that their base four-door Cherokees continue to be priced below competitive four-door Ford Explorer and Chevrolet S-10 Blazer models. Base prices of the two-wheel-drive and four-wheel-drive four-door 1990 model Cherokees are currently slightly below those of the four-door Explorer and Blazer S-10, which were introduced as 1991 models.

> "You can't have one division going into another division's pantry."
>
> **Rick Tomkinson**
> Chrysler-Plymouth dealer council

A spokesman for Chrysler Corp.'s Jeep-Eagle division declined comment on the dealers' product requests.

The company has not formally responded to the dealers' written petition, dealers said.

Since 1987, when Chrysler acquired American Motors Corp. and created the Jeep-Eagle franchise,

Ford joins GM in rental buyback program on '91 models

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. told dealers last week that it will offer to purchase all 1991 program vehicles from daily rental-car companies except Ford Escort and Mustang GT and Mercury Tracer and Capri.

Ford's announcement follows a similar announcement by General Motors three weeks ago. GM offered to repurchase all 1991 GM program vehicles from the rental companies. It also signals Ford's growing concern about GM's aggressiveness in the fleet market.

In the past, Ford has repurchased 50 to 75 percent of the rental vehicles.

While the change was hailed by Ford and Lincoln-Mercury dealers, it puts Ford in a curious position with Hertz Corp. Ford owns 49 percent of Hertz, the largest daily rental company. Hertz operates 97 resale car lots — the most in the rental car industry — and purchases 100,000 to 200,000 Ford vehicles annually.

Craig Koch, president of Hertz's North American Rent-A-Car Oper-

Crash parts clash

Makers, insurers face off over patent bill

By Helen Kahn
SENIOR CORRESPONDENT

WASHINGTON — Automakers last week called for design patent protection for crash parts — the hoods, doors, fenders and grilles most often damaged in more than 35 million highway crashes each year.

The insurance industry took the other side in a House Judiciary subcommittee hearing. Both camps testified on a package of bills intended to protect industrial design and patents.

Automakers said copied crash parts aren't as good. Insurers said the parts are tested for quality and save consumers a bundle.

Kenneth E. Myers, marketing manager for Ford Motor Co.'s Parts and Service Division, said the imitation crash parts aren't exact copies. Speaking on behalf of the Motor Vehicle Manufacturers Association, he said the makers of imitation sheet metal — mostly in Taiwan — "have no investment in the design, engineering and testing of parts but simply copy someone else's efforts."

But State Farm, the nation's biggest property and casualty insurer and a major buyer of crash parts, accused the automakers of trying to retrieve a monopoly lost in the early 1980s.

State Farm vice president C.A. Ingham said prices of original equipment manufacturer's parts plunge when non-OEM makers enter the market.

He cited a Dodge Aries fender as an example. The part cost $221 from Chrysler in 1983, dropped to $180 in 1984 when competition first appeared and sold for $87 in 1986. The non-OEM Aries fender sold for $79 in 1986, Ingham said.

The total annual crash parts market is about $9 billion, about three-quarters of which represents insurers. Even though there is

Sentra sibling

Nissan's new Presea replaces the aging Liberty Villa and Langley, two versions of the Sentra that are sold in Japan. Nissan says there are no plans to sell the specialty sedan beyond Japan. Presea's dimensions position it between Sentra and Stanza. It will compete with Toyota's fashionable Carina.

Firings, retirements of GM workers linked to stock scam

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Dennis Peterson, a 22-year employee of General Motors before he was fired in April, wants to clear his name.

GM dismissed the 43-year-old Peterson April 4, charging he was part of a stock scheme involving the company's savings program. Peterson claims he is innocent and intends to prove it.

Peterson is one of at least three former salaried employees of GM's stamping plant in Chicago who were dismissed for their alleged participation in the scheme in October 1988. Other salaried employees at the plant allegedly involved in the scheme retired or just left the company.

Similar allegations led to the departure of nine salaried workers at the Chevrolet-Pontiac-Canada Group plant in Bay City, Mich., including the plant manager, Patricia Carrigan, in April.

The alleged scheme involves employees signing GM stock-purchase forms and dating them weeks earlier to take advantage of changes in stock prices.

The *Flint Journal* in Flint, Mich., reported that two former Chicago workers other than Peterson confirmed they had been dismissed over the scheme. One said he was told to back-date transactions because it was permitted. The second said he had no knowledge of the back-dating. Both denied there was any conspiracy to make the transactions.

The newspaper also reported that former Bay City, Mich., employees acknowledged they backdated records to benefit themselves. Some of those employees were fired; others retired.

The departures of the Bay City and former Chicago employees came at about the same time as the departure of Nelson Gonzalez, former plant manager of the Buick City complex in Flint, Mich. Gonzalez managed the Chicago plant before it closed.

Gonzalez told the *Flint Journal* he was unaware of dismissals linked to the stock savings program. He said his retirement was unconnected to the departures of other employees.

GM refuses to discuss the employee departures or the alleged stock scheme.

But in the past two weeks, GM issued a memo reiterating its policy on transactions involving the employee savings program. The notice said investment transfers take effect only on the 15th day or the last day of a month. Changes made between those dates don't take effect until the next deadline.

Peterson, who went to work for GM as an hourly press operato and worked his way up the sala ried ranks to a $73,000-a-year su perintendent position, said he wa unaware of any stock scheme.

A letter to Peterson, signed b Richard F. O'Brien, GM vice pres dent of the Personnel Administra tion and Development Staf charges that Peterson collude with others to back-date the trans actions. Specifically, GM claim Peterson realized an extra $4,50 profit from the sale of nearly $40 000 worth of stock in October 198 by back-dating forms.

Peterson said he did not back date the forms. He said he told th

Chrysler exec predicts more maker alliances

TORONTO — A Chrysler Corp. executive last week made the case for an "innovative combination" of automakers that are adapting to compete globally.

Robert A. Perkins, Chrysler vice president for Washington affairs, suggested that automakers that rely too heavily on their home markets violate an auto industry principle that a company's home market should account for about half its sales.

He presented charts showing that of the world's 15 largest automakers, Chrysler and Italy's Fiat Auto S.p.A. are the most dependent on their home continents.

"Clearly, many more joint ventures or strategic alliances are likely," Perkins told the annual meeting of the Society of Automotive Analysts.

His comments were particularly timely because of reported talks between Chrysler and Fiat. Executives of the two companies are known to be discussing expanding their current relations.

Perkins told the analysts he had no inside knowledge of the talks.

But in general terms, he made the case for expanded relations between companies that are strong in only one of the world's three major markets: North America, Western Europe or Asia.

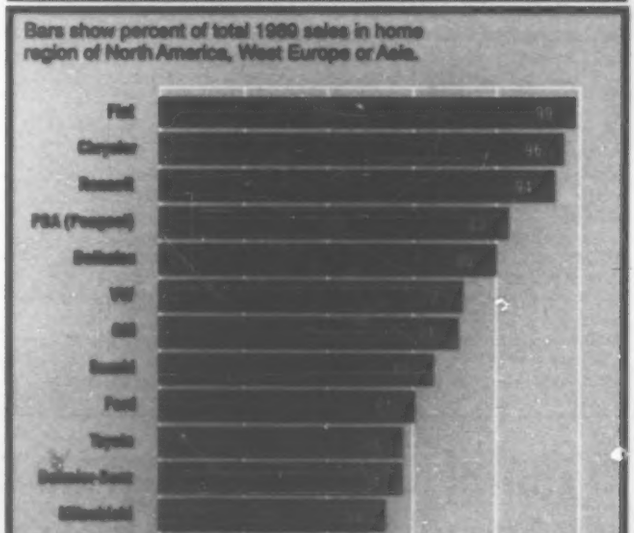
> Automakers that rely too heavily on their home markets violate a principle that a company's home market should account for about half its sales.
>
> **Robert A. Perkins**
> Chrysler Corp.

The combination of two companies that are strong in separate markets could quickly create an operation that would have the desired half of sales in its home market, Perkins said.

He suggested that many combines could become one of the world's four largest automakers.

In 1989, the fourth through the 12th largest automakers each had a worldwide market share ranging from nearly 3 percent to just over 6 percent, Perkins said. Many combinations of two of those nine could result in the world's third or fourth largest automaker, he said.

Reliance on home region sales



Perkins' listing of the top automakers had General Motors leading with 16.3 percent of the worldwide market, followed by Ford Motor Co., 13.5 percent; Toyota Motor Corp., 9.0 percent; and Volkswagen A.G., 6.3 percent.

Chrysler was seventh with 4.7 percent, followed by Fiat, 4.6 percent.

Fiat rumors ignite trading of Chrysler stock

Chrysler Corp. stock prices fluc tuated last week following report that the company was involved i unspecified negotiations wit Italy's Fiat Auto S.p.A.

Chrysler's common stock pric rose from $15.13 per share Jun 15 to $16.63 per share at closin June 19 following the reports earl last week.

The stock dropped to $16.25 a closing June 20, but closed a $16.38 Thursday on moderatel heavy volume.

Volume was heavy early in th week, with 1,699,800 shares trade Tuesday. Average daily volume fo Chrysler is about 600,000 share said Ronald Glantz, auto analys with Dean Witter in San Fran cisco.

Speculation within the industr has ranged from the possibility o Fiat taking an equity stake i Chrysler to the two automaker making distribution and product development agreements in Nort America and Europe.

The reports became widespres after Chrysler and French auto maker Regie Nationale des Usine Renault announced June 12 tha they have terminated their $50 million, 50-50 joint venture to pro duce and distribute a mini sport utility.

New Mustang likely to gallop on upgraded platform

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

The much-discussed future of Ford Motor Co.'s Mustang is coming into clearer focus at the company's Dearborn, Mich., headquarters.

Sources at both supplier and factory levels say Ford is leaning toward a proposed project called the SN95 that would replace the current Mustang in the 1995 model year.

But instead of building a new $2 billion rear-wheel-drive platform, Ford is tentatively planning to use an improved version of its present platform.

The current Mustang platform was introduced in 1978. Sources say the car, as currently planned, would have an all-new exterior, quite different from its current one.

Ford planners' first choice for the future Mustang is to improve the present platform, sources say.

Their second choice is to use an all-wheel-drive version of the CDW27 (Tempo/Topaz/Sierra replacement). The CDW27 is engineered by Ford of Europe. It will be introduced in Europe in 1993 and in the United States in 1994.

For Mustang, the awd CDW27 is less desirable because it weighs and costs more than the current car.

Weight is becoming a big issue in determining a car's fate at Ford, because higher Corporate Average Fuel Economy mandates are quite possible. Current Mustang EPA ratings range from 17 mpg (5.0-liter engine, city driving) to 29 mpg (2.3-liter engine with five-speed transmission, highway driving).

Ford is also carefully monitoring engineering budgets after recent product programs involving the 1989 Thunderbird and 1991 Escort came in over budget.

An awd version of Thunderbird, which had been scheduled for the 1991 model year, was canceled earlier this year because it exceeded weight and cost limits.

The Mustang program has been up in the air since 1988, when Ford decided to introduce the Mazda-based Probe as a separate car from the Mustang.

The Probe was to have replaced the Mustang, but an outcry from Mustang supporters convinced Ford that there was still a market for a small, rear-wheel-drive American sporty car.

Despite the support Ford is showing for Mustang, its sales have fallen steadily. Through May of 1990, Ford sold 52,925 Mustangs and 50,836 Probes. For the same period in 1989, Ford sold 81,910 Mustangs and 56,933 Probes.

BOTTOMING OUT

'90 has been rough, but Mike Losh, Oldsmobile chief, sees better year ahead

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Next year could mark a turnaround for Oldsmobile.

In the 1991 model year, Oldsmobile, in an attempt to end its sales slide, will:

- Introduce three new products — the Bravada sport-utility, a redesigned 98 luxury car and a redesigned Custom Cruiser wagon.
- Possibly reduce prices on some models.
- Stick with its current "New Generation of Oldsmobile" ad theme but emphasize competitive comparisons;
- Use a mix of consumer, dealer and regional incentives.

J. Michael Losh, who became Oldsmobile general manager June 1, 1989, expected the 1990 model year to mark a turnaround for the division, but Olds sales have continued to spiral downward.

They dropped from a record 1,066,122 in calendar 1985 to 600,037 in calendar 1989. The division's share of the car market plummeted from 10.97 percent in 1983 to a 19-year low of 6.08 percent in 1989.

For calendar 1990 through June 10, Oldsmobile car sales, excluding the Silhouette, totaled 235,415, down 17.21 percent from a year earlier.

Losh now calls last year's prediction "rash." He blames Olds' continuing slide on the industry's sales slump.

> We need to have major introductions — additions and replacements to our product line every year.
>
> **J. Michael Losh**
> Oldsmobile general manager

Oldsmobile's 1990 sales decline is about three times as great as that of the industry as a whole. Oldsmobile car sales as of May 31 were down 16.35 percent from last year. Total industry car sales were down 5.28 percent.

"I'm not quite sure that I fully understood the impact of all the competitive pressures — that they were going to be as intense as they have turned out to be," Losh said in an interview.

Nevertheless, he believes Oldsmobile sales will improve in the 1991 model year if industry sales plateau at the 1990-model-year level. He won't make specific predictions on Oldsmobile's performance.

"We have strong new products," Losh said. "And we need to do that every year. We need to have major

Olds job tough, but not his toughest, Losh says

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — J. Michael Losh says his job as general manager of floundering Oldsmobile Division isn't the easiest he's ever had.

But it isn't the toughest either, says the 44-year-old executive.

After holding a number of posts on GM's financial staff, Losh took over as director of GM do Brasil in the summer of 1979. The following December, the government made its first major monetary devaluation, sending the economy into a tailspin "that maybe isn't over yet," says Losh.

He became deputy managing director of General Motors de Mexico in the summer of 1982 and on Sept. 1, the Mexican government nationalized the banking system, turning the economy upside down.

"So I wouldn't say at all that this (Oldsmobile job) has been the most difficult," Losh says with a chuckle.

He took over at Oldsmobile June 1, 1989, after five years as general manager of Pontiac.

During his tenure at Pontiac, the division's sales climbed. It captured the No. 3 spot in industry car sales from Oldsmobile.

Last year, Losh thought Oldsmobile's sales had bottomed out and that they would begin to climb in the 1990 model year. But they have continued to fall.

Oldsmobile's woes reached a fever pitch during the division's make meeting at the February convention of the National Automobile Dealers Association. About a third of the 150 to 200 people at the meeting walked out, angry at Losh for his responses to their questions and complaints.

Despite the division's problems, Losh is confident of a turnaround in the 1991 model year, and he finds the job fulfilling.

Mercedes says minivan project is low on the list, but not dead

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

HOCKENHEIM, West Germany — While Mercedes-Benz AG officials weigh the pros and cons of building a minivan, the idea appears to be low on the company's priority list.

Last week, Bruno Sacco, director of Mercedes-Benz design, said he doubted Mercedes would produce a minivan.

And Wolfgang Peter, the Mercedes-Benz management board member in charge of research and development, said the company's priorities are to replace the present full-sized S-class line, entry-level 190 series and mid-sized 300 series.

"If you look at the upcoming S class and the successor to the

you can see where the priorities are," Peter said.

But the idea has not been killed, he said.

Peter noted that the U.S. minivan market is approaching 1 million units a year.

"A market like that cannot be neglected by a company like this," Peter said.

"If there is capital enough, if there is time enough, and if there is manpower enough, we will be able to consider it."

He said Mercedes still has to determine design, price and volume for the proposal.

The company has said a decision will be announced soon.

Mercedes has been wrestling with such issues as how to create upscale — but profitable —

Hyundai growing up

Dealer body, lineup will double by '93

By William R. Diem
ASSISTANT MANAGING EDITOR

SANTA MONICA, Calif. — Hyundai Motor America plans to more than double its dealer body and model lineup by the end of 1992.

The company now has 331 dealers and two products: Excel and Sonata. By late 1992, it plans to have 750 to 775 dealers and at least two more cars: the Scoupe, to be introduced this summer, and the code-named J-car sedan, scheduled for arrival in spring 1991 as a 1992 model.

Hyundai loses exec to Infiniti, Page 53

"We are right on course in our plans to become a full-line automotive manufacturer," said H.W.

Scoupe, once code-named SLC for Sporty Looking Car, is a two-door based on the Excel platform. Ital Design shaped it, and Lotus Engineering put it on springs.

Like Scoupe, the J-car will be positioned between the subcompact Excel and the mid-sized Sonata. "Toyota has Tercel, Corolla and Camry," said Rod Hayden, the chief operating officer who came out of retirement from Mazda Motor of America Inc. to join Hyundai in January. "The J-car will be our Corolla."

Hyundai advertising is now emphasizing value instead of low prices alone.

"We all know you can't diversify if your name is synonymous only with low price," said Hayden. "What you can live with and grow

Clear coat paint shop planned for Tempo/Topaz plant in Canada

OAKVILLE, Ontario — Ford Motor Co. of Canada plans to build a clear coat paint shop for its assembly plant here, beginning in late July. The new shop will enable Ford to apply clear coat paint on Tempo and Topaz cars built at Oakville.

Ford of Canada President Kenneth Harrigan said Ford of Canada's board of directors is expected to vote on the proposal in July.

The new paint facility, if approved, will be the largest single investment Ford has made at a Canadian facility. It is expected to cost more than the $300 million Ford spent on a similar installation at St. Thomas, Ontario.

The St. Thomas plant builds the Ford LTD Crown Victoria and Mercury Grand Marquis.

A Ford spokesman said the Kansas City, Mo., assembly plant, is the only plant that now can apply clearcoat to the Tempo and Topaz.

Completion of the new paint facility is set for fall of 1992.

Ford officials have confirmed that the company would like to build the replacement for the Ford Aerostar, code-named WIN88, at Oakville. The WIN88 is based on the next-generation Taurus wagon and is scheduled to be introduced in the 1994 model year.

Auto trade deficit drops 15.4%

Monthly gap falls to $3.1 billion; U.S. car exports to Japan up

WASHINGTON — The U.S. automotive trade deficit in passenger cars and light trucks improved 15.4 percent in February.

The latest automotive trade figures released by the U.S. Commerce Department show nearly every major vehicle-producing nation — with the exception of Italy — suffering a drop in the number of vehicles shipped to the United States.

The number of cars shipped to the United States was down 16.7 percent and light trucks fell 29.6 percent. The overall value of those vehicles was down 13.2 percent from February 1989.

That helped reduce the overall vehicle trade deficit for the month to $3.18 billion, compared with $3.77 billion in February 1989.

On an annualized basis, the automotive trade deficit stood at $41.18 billion for the 12-month period ended in February. This compares with a $44.54 billion deficit for the same period ended February 1989, a decline of 7.5 percent.

Vehicle shipments from Japan fell by more than 24,000 units to 184,512 for the month. The value of those vehicles declined 12.4 percent.

The number of vehicle shipments from Canada fell 12.1 percent to 133,598 units. Their value decline 13.1 percent.

The value of monthly vehicle imports fell 13.3 percent from West Germany; 48.0 percent from South Korea; 5.8 percent from Sweden; 11.2 percent from Mexico; 99.1 percent from Yugoslavia; 19.0 percent from the United Kingdom; 83.0 percent from France; 70.3 percent from Brazil; and 6.2 percent from nations identified as "others" by the Commerce Department.

The value of passenger cars shipped to Japan increased 93 percent. The U.S. sent nearly 3,000 cars to Japan in February 1990, compared with fewer than 1,900 during February 1989.

Exports of U.S.-manufactured light trucks hurt overall export performance, however. The total value of light truck shipments fell 35.9 percent.

Exports of passenger cars declined 5.2 percent to Canada and 18.8 percent to nations identified as "others" by the Commerce Department. Exports of light trucks fell 39.9 percent to Canada and 69.2 percent to all other nations.

On an annualized basis, U.S. exports stood at 913,030 vehicles as of February 1990. Annualized imports were 4,757,695 vehicles for the same period.

Land Rover opens Canadian sales network

By Alex Law
STAFF CORRESPONDENT

MISSISSAUGA, Ontario — Land Rover Canada Inc. officially begins operations this week.

The company has seven dealers in six cities. It expects sales of the British-built Range Rover luxury sport-utility to total about 250 a year initially.

Dealers in Montreal; Toronto; Oakville, Ontario; Calgary, Alberta; Halifax, Nova Scotia; and Vancouver, British Columbia will sell the standard Range Rover for about $60,000 ($51,085 U.S.) and the County for about $65,000 ($55,342 U.S.), said Roger Ball, Land Rover Canada general manager.

Ball was launch manager for Range Rover in the United States when it began operations five years ago. The vehicles, built by the Rover Group PLC unit of British Aerospace PLC, are priced at $38,025 and $43,100 in the United States.

"We're coming in at the top of a growing sport-utility market in Canada," said Ball. He said Canadian sport-utility sales increased 60 percent from 1986 to 1989, to more than 82,000 units. "If the same rate of growth continues, some 100,000 sport-utilities will be sold in 1991," Ball said.

There are no immediate plans to add the two-door Discovery model to the line, either in Canada or the United States, Ball said.

Even though the 25 percent U.S. tariff on imported two-door sport-utilities would not apply in Canada, Ball said he can't bring the vehicle in because he's "piggybacking" so much of his operation (parts and warranty) on the United States and couldn't afford to go it alone.

Range Rover Canada is a subsidiary of Range Rover of North America Inc.

Range Rover of Canada's five-person office is slated to open this week, when dealers are scheduled to get their first shipments. Dealers will be linked by computer to headquarters "and can perform all business reporting directly, including parts ordering," Ball said.

The company has an agreement with Caterpillar Inc. for parts storage and shipment, Ball said. The system will enable any dealer to receive parts within 24 hours.

Ottawa and Winnipeg, Manitoba, are likely expansion targets.

Ball joined Land Rover Ltd. in 1970. After managing Range Rover's U.S. introduction, he became U.S. marketing director and then zone manager for the North

Import sales dip 11%; Japan, Korea, Europe share loss

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

Sales malaise struck importers last month as import car sales fell 11.39 percent to 230,273 units.

Europe, Japan and Korea all fielded more losers than gainers during May's 26 selling days. But most Japanese makers more than made up for declining imports with increases in sales of their North American-built products.

Sales of European imports dropped 15.08 percent, Japanese cars fell off 9.28 percent and Korean makes were off 17.93 percent in May compared with the year-ago period.

The relatively tiny winners' circle included Audi, BMW, Volvo, Mercedes-Benz, Suzuki, Mitsubishi and Acura. Of those, Audi had the biggest percentage increase, 19.63 percent.

As an example of the effect transplant production is having on the industry, imported Honda-badged cars were off 9.80 percent, and the import version of the popular Accord fell 7.51 percent. Still, the division had its best month ever, selling 70,411 Accords, Civics and Preludes. Accords and Civics are built in North America. Sales of the aging Prelude, which is imported, fell 17.52 percent.

In another example, Toyota's import sales declined 18.00 percent, with big drops in the Corolla, Camry and Cressida lines. Yet Toyota's overall import and North-American built sales, not counting Lexus, jumped 27.13 percent.

Nissan continued to struggle, despite an impressive turnaround in Stanza sales. Stanza sales jumped 57.63 percent to 8,744, while sales of imported Sentras, Pulsars, 240SXs and 300ZXs each fell more than 30 percent.

Nissan's combined sales for import and domestically built cars, excluding Infiniti, fell 13.20 percent to 40,817.

Mitsubishi's 12.64 percent jump in import sales was due in large part to the strong performance of the Galant.

The Miata continued to sell well for Mazda — 4,103 sales in May — but its import total was down 1.48 percent to 15,929 in May. The biggest factor was a decline in sales of imported 626 models. The 626 now is assembled in the United States. U.S.-built cars pushed overall Mazda sales up 5.78 percent for the month.

Hyundai saw an 11.89 percent jump in Sonata sales to 3,068, but that could not offset a 24.11 percent plunge by Excel. Hyundai's total was down 18.04 percent from May 1989.

On the European front, strong models included the Audi 80, up 62.28 percent; BMW's 5 series, up 9.46 percent; the Mercedes-Benz 560SEC, up 45.54 percent; Porsche's 911 Carrera 4, up 41.84 percent; and the Volvo 740 series, up 26.86 percent. The 740 was Volvo's only gainer in a month that saw overall Volvo sales increase 6.77 percent.

For the first five months of 1990, import-car sales totaled 1,045,699, down 9.15 percent from last year. Sales of South Korean makes plunged 27.19 percent for the period. Sales were down 4.55 percent for Japanese makes and 1.93 percent for European entries.

Auto rebate war continues to heat up

By Arlena Sawyers and Laura Clark
AUTOMOTIVE NEWS STAFF REPORTERS

The incentive war raged on last week, as Oldsmobile, Sterling Motor Cars and Ford Motor Co. announced new and/or adjusted consumer rebates and dealer incentives.

Oldsmobile stepped up its efforts in the already intense minivan battle with a $1,000 consumer rebate on its 1990 Silhouette until Aug. 2.

Other customer rebates on minivans include Ford Aerostar, $700; Pontiac Trans Sport, $1,000; and Chevrolet Lumina APV, $900. Chrysler Corp. is giving its dealers a $500 rebate on Chrysler Town & Country, Dodge Grand Caravan and Plymouth Grand Voyager.

In lieu of the rebate, Silhouette buyers may choose finance rates of 7.9 percent for contracts up to 48 months and 10.9 percent for contracts of 49 to 60 months.

Oldsmobile also is paying dealers up to $1,250 on Silhouette sales, based on the number sold. That program also is scheduled to end Aug. 2.

Sterling Motor Cars is offering buyers free financing on 24- and 36-month loans, 2.9 percent to 11 percent financing on 48-month loans and 4.9 percent to 11 percent on 60-month loans, depending on the amount of the downpayment.

Sterling also offers three-year/36,000-mile free-maintenance leasing. The programs expire Sept. 15 and include all models except the limited-production Oxford edition. The $5,000 buyer rebate on 1989 Sterlings has been extended until Sept. 30.

Ford Motor announced that it will give dealers an extra $200 rebate on Ford Crown Victoria and Mercury Grand Marquis models if they sell their quotas of 1990 and 1991 Escorts and 1989, 1989½ and 1991 Tracers.

Dealers must reach their Escort and Tracer quotas between June 12 and July 9 to receive the extra rebate on the big cars.

Ford already has a dealer rebate on 1989, 1990 and 1991 Crown Victoria and Grand Marquis models sold or leased from June 14 to July 9. The payments are: one to two units, $100; three units, $200; four units, $300; five or more units $500.

Residents of Alaska, Washington, Oregon, California and Hawaii are not eligible for the additional cash incentive on Crown Victoria and Grand Marquis.

Also through July 9, Lincoln-Mercury dealers earn an additional $1,000 on sales of 1990 Grand Marquis and $600 on sales of 1990 Lincoln Continentals.

Ford extended regional customer incentives on Red Carpet leases on Ford F-series pickups and the Ford Probe until Aug. 8. The incentive on the pickups is offered in Texas, Oklahoma and Louisiana. The Probe incentive applies in Alaska, Hawaii, Washington, Oregon, California, Montana, Idaho, Nevada, Utah, Arizona, Wyoming, Colorado and New Mexico.

Ford is offering special Red Carpet leases on 1991 Escorts and 1991 Crown Victorias from June 14 to Aug. 8.

Persons who lease a Ford Taurus for 25 to 36 months will receive $500. The program began June 14 and ends Aug. 8.

INCENTIVE WATCH

DEALER INCENTIVES

	Rebate	Expiration Date
Chrysler Corp. (1990 models)		
Grand Caravan, Grand Voyager, Town & Country	$500	July 17
Dodge Shadow, Plymouth Sundance	$750	Aug. 31
Ford Motor Co. (1990 models)		
Taurus SHO	$1,000	July 9
Tempo	$250	July 9
Grand Marquis	$1,000	July 9
Continental, Mark VII	$600-$1,000	July 9
Ford Motor Co. (1989-1991 models)		
Crown Victoria, Grand Marquis	$100-$500 based on number sold*	July 9
*$200 extra on each sale if dealer meets Escort/Tracer sales quota.		
General Motors (1990 models)		
Buick Estate Wagon	$1,000	Aug. 2
Corvette	$2,000-$4,000 based on sales	July 9
Chevrolet Geo, Celebrity	$500-$1,000	July 9
Geo Tracker	$1,000	July 9
Oldsmobile Cutlass Supreme, 88, Custom Cruiser, 98, Silhouette	$750-$1,250, based on sales	Aug. 2
Pontiac Firebird	$500	Aug. 2
Audi (1990 models)*	$2,000-$3,000	June 30
*Dealer has option of foregoing cash incentive and offering cut-rate financing to customer.		
Honda (1990 models)		
Civic	$300-$600, quota	June 30
CRX; Prelude	$500	June 30
Hyundai Excel (1989-90)	$200, quota	July 10
Isuzu (1990 models)		
Pickups*	$800-$1,300 based on number sold	June 30
Trooper	$900-$1,400 based on number sold	June 30
*$200 extra on 4wd models		
Mitsubishi (1989-1990 models)		
Cars, trucks*	$500-$2,000 based on number sold	June 30
*Payments vary by regions.		
Nissan (1990 models)		
Sentra, Stanza	$300-$1,500	Aug. 2
Trucks	$1,000	Aug. 2
Axxess	$1,000-$1,500	Aug. 2
Saab (1990 models)		
9000 Series	$1,500-$4,000, quota	July 31
Subaru (1990 models)		
Justy ECVT	$500	July 3
Loyale	$400	July 3
Legacy	$400-$1,200, based on sales	July 3
Suzuki (1989-90 models)*		
Swift	$400-$2,000	Aug. 2
Samurai	$1,000	Aug. 2
Sidekick	$1,000-$2,500**	Aug. 2
*Customer rebate or dealer rebate; dealer's choice. **$3,000 in California		
Toyota (1989-1990 models)		
Tercel, Corolla, Camry	$300-$700, quota	July 3
Trucks	$500-$900, quota	July 3
Note: Some makers offer rebates to dealers on sales of 1989 and 1990 models. These programs are omitted from this table because of the limited number of these vehicles still in dealers' hands.		

BUYBACK

FROM PAGE 1

ations, said if the program is offered every year, Hertz may have to close a few of its resale lots.

"If we convince ourselves that the 100 percent repurchase program will be around for some years to come, it may not be economically advantageous for us to retail as large a volume in the future," Koch said.

Koch said Hertz customers like newer cars. If Hertz can use a car or truck for Ford's minimum four-month period, then sell it back for a predetermined price, it may make economic sense to do so.

Ford Credit officials estimate that the program will put about 100,000 more cars and trucks through factory-sponsored auctions annually than in the past. Ford sold 160,000 to 170,000 former rental cars and trucks through factory-sponsored auctions in the 1990 model year.

In the past, Ford has repurchased 50 to 75 percent of the cars and trucks sold to daily rental-car companies, depending on the model. Bill Willis, general fleet manager for Ford Division, said Ford would typically repurchase its higher-volume fleet cars to help used-car values.

Dave Osterhoff and Jerry Homeszyn, Ford Credit remarketing managers, said Ford may have to expand its number of auctions and vehicles per auction in the future because of the additional vehicles going through the auction houses. Ford currently uses 43 auctions, according to Willis.

The program will also affect prices. Willis said Ford intends to pay rental companies a higher percentage of the original price of the vehicle.

In a June 18 dealer memorandum, Ford said Escort and Tracer may be added to the program when production is higher.

A Ford spokesman said the Festiva will not be part of the repurchase program because of the limited profit on the car, and Capri will not be included because of limited production in Australia. Mustang GT is not included because of limited appeal to rental companies.

Vehicles in the program must be equipped in a manner that will help Ford resell them. Specific items have not been announced.

Participating companies must order at least 10 Ford or Lincoln-Mercury vehicles per account or licensee. Ford will absorb up to $350 for sheet metal and paint repairs and damaged parts. Ford will not give a bonus to rental companies that dispose of the cars themselves, as in the past.

Ford is also instituting graduated mileage charges on vehicles returned with more than 20,000 miles, up to 25 cents for every mile over 30,000 miles retroactive to 20,001.

Ford Rent-A-Car System vehicles — or vehicles that are part of the dealership's own rental car agency — are not eligible for repurchase.

Ford dealers were enthusiastic about the new program. Some said it will allow them to compete with the resale lots operated by the daily rental companies. Dealers had argued that those lots were selling low-mileage, nearly new cars at thousands of dollars below new cars on dealers' lots.

"I have three rental car resale operations near my dealership. I'm sure if they go away, my used-car business is bound to increase," said Joe David Pacifico, general manager of Pacifico Ford in Philadelphia, which sold 10,402 Ford fleet vehicles in 1989.

Daily rental companies receive large fleet discounts or incentives because they buy in large quantities. Manufacturers like the daily rental business because it helps them smooth out the peaks and valleys of retail sales and helps to keep their factories running.

Elvin Pool, general manager of McInerney Ford in Orlando, Fla., a large Ford fleet dealer, said the profit potential on the cars he sells to the rental companies could rise from $25 to $200.

"I think the new battleground for market share is going to be in these nearly new cars," said Peter Lukasiak, executive director of National Auto Auction Association in Monrovia, Md.

OBITUARIES

George F. Addes

DETROIT — George F. Addes, the first elected secretary-treasurer of the UAW, died June 19 at age 79. Addes was elected in 1936 and served in that position until 1947. UAW President Owen Bieber hailed Addes as "a union pioneer and a lifelong champion of working men and women."

William Toombs Richardson

OKLAHOMA CITY — William Toombs Richardson, retired former owner of Dub Richardson Ford, Inc. and a former president of the Oklahoma Automobile Dealers Association, died May 17. He was 76.

Ansel Lyon Nowell

CASA GRANDE, Ariz. — Ansel Lyon Nowell, former owner of Nowell Motors in Casa Grande, died April 26. He was 88.

Edward Roy Jarman

PORTLAND, Ore. — Edward Roy Jarman, former owner of Chevrolet dealerships in Coos Bay and Oregon City, died in Palm Springs, Calif. He was 91.

PARTS

FROM PAGE 2

competition in only a small part of the market so far, Ingham said it has already saved consumers hundreds of millions of dollars.

While State Farm's Ingham said quality of the non-OEM parts is the same as OEM parts, Myers said Ford's tests show the former are "frequently are made of inferior metal, have variations in fit and finish and inadequate corrosion or rust protection."

Myers accused the Certified Automotive Parts Association, set up three years ago by the insurance industry to test crash parts, of having "vague" standards that apply "only to appearance — not to strength, safety or rust-protection."

Inferior quality, said Myers, affects the automaker's reputation, and consumers often do not know their manufacturer's warranty does not include an "imitation body panel part or other damage resulting from the use of such parts."

Ingham said that Certified Automotive Parts Association testing is done by the independent Detroit Testing Laboratory, which not only tests parts but inspects manufacturing plants as well. Moreover, State Farm warrants the CAPA-certified parts for fit and corrosion problems for the life of the car.

> Non-OEM parts can be cheaper because their producers do no research or design and they make only high-volume parts.
>
> **Kenneth Myers**
> Ford Motor Co.

Myers said non-OEM parts can be cheaper because their producers do no research or design and they make only high-volume parts. In contrast, vehicle makers stock a complete line for vehicles no longer in production. Ford alone has more than 2,000 panel parts, including 191 different fenders and 387 different fronts and grilles.

Myers said there is "no credible evidence" that insurers pass cost savings on to consumers. "From 1982 to 1989, the total value of sheet metal imported from Taiwan increased fivefold; insurance rates still increased 68 percent, twice the rate of inflation."

PRODUCTION

Makers face 2nd trucker blockade

By Anne Wright
AUTOMOTIVE NEWS CHIEF STATISTICIAN

U.S. and Canadian automakers may face another cut in vehicle production as independent Canadian truckers threaten a blockade at both the bridge and tunnel that link Detroit and Windsor, Ontario.

The blockade may occur by Thursday if the Canadian government fails to meet with the blockade leader on issues that led to a protest in May.

At that time, the Canadian truckers demonstrated against their government's policies which, they say, undercut their ability to compete with U.S. truckers. Plants in the United States and Canada ran low on parts and were forced to close or reduce working hours.

Last week, U.S. auto production was scheduled at 145,014, 0.36 percent above the prior week and 2.78 percent above the same week a year ago.

Domestic truck production was estimated at 93,819 units last week, 1.10 percent below the previous week but 12.52 percent above last year.

Companies split last week's targeted car output as follows: General Motors, 45.85 percent; Ford Motor Co., 24.05 percent; Chrysler Corp., 11.93 percent; Honda of America Manufacturing Inc., 6.19 percent; Toyota Motor Manufacturing U.S.A. Inc., 3.03 percent; New United Motor Manufacturing Inc., 2.83 percent; Mazda Motor Manufacturing Corp. U.S.A., 2.74 percent; Diamond-Star Motors Corp., 1.96 percent; Nissan Motor Manufacturing Corp. U.S.A., 1.08 percent; and Subaru-Isuzu Automotive Inc., 0.34 percent.

GM scheduled Friday overtime at Janesville, Wis., and Saturday overtime at Lansing (A), Mich.

Ford scheduled daily overtime at its Wayne and Wixom, Mich., car plants and all truck facilities.

Saturday overtime was slated at Ford's Wayne, Mich., car plant and its Louisville, Ky., truck plant.

Car production rises in Canada

Canadian automakers, like their Detroit neighbors, are monitoring another possible border blockade by independent Canadian truckers.

Big 3 assembly plants will begin model changeover Friday and may not be affected as severely as parts suppliers to the United States.

Canadian automakers scheduled 26,168 units last week, 3.09 percent, above the previous week and 14.59 percent above the year-ago week.

So far this year, 518,595 cars have been produced, 2.78 percent above last year's total at this time.

Estimated truck production last week was 20,092 units, 4.92 percent below the prior week and 6.29 percent below the year-ago week.

Year-to-date, 456,578 trucks have been assembled, 8.81 percent behind last year's total.

Chrysler's Windsor, Ontario, plant will close for model changeover Friday. The plant assembles Caravan and Voyager minivans.

Dealers hold bag as American Warranty quits

CONTRACT Casualties

By Charles M. Thomas and Jim Henry
AUTOMOTIVE NEWS STAFF REPORTERS

The beleaguered vehicle service contract industry got another jolt Friday when American Warranty Corp. told car dealers it was tottering on the verge of collapse.

Dealers could be stuck with millions of dollars in unfunded car repairs.

"In the last three years, more than 15 extended service contract administrators have gone out of business," American Warranty President Robert Lustbader told dealers at a meeting in New York. "I regret to say that American Warranty got caught up in this turmoil."

American Warranty is one of the oldest companies, started in 1971.

In meetings at five hotels on Friday, Lustbader made dealers an offer hard to refuse. He said American Warranty would return to them 40 percent of the existing reserve fund to cover repair costs. The remaining 60 percent would go to cover American Warranty's existing liabilities.

The hitch: Dealers would have to accept the risk for future liabilities. They could administer the service contracts themselves or find another extended warranty administrator to do it for them.

Dealers will probably incur hefty losses on future claims in either case, even though American Warranty says the money it returns to dealers will cover repairs.

Sources said reserves amount to about $20 million, so the immediate payout to dealers would be $8 million.

American Warranty, based in Lincolnwood, Ill., has been selling service contracts through car dealers in 36 states and is licensed to sell in all 50.

Lustbader played a nervy game of chicken with dealers. He said the alternative is liquidation of American Warranty by the Illinois Department of Insurance.

He conceded that could possibly

Distributor battles Toyota attempt to control territory

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Toyota Motor Sales U.S.A. Inc. says it can to a better job in five Eastern states and has set out to take over its longtime distributor, Mid-Atlantic Toyota.

Toyota told Mid-Atlantic on June 20 that its Toyota Motor Distributors subsidiary will assume all distribution responsibilities for the region and acquire Mid-Atlantic's assets Oct. 1

Despite an earlier agreement setting terms for a buyout, Mid-Atlantic Toyota Distributors Inc. said it was shocked by the move and promised to fight it in court.

The legal battle intensified last week when Toyota secured a court order preventing Mid-Atlantic from filing suit outside California. Fred Weisman Co., the owner of Mid-Atlantic, dodged the order with a technicality and sued last Wednesday in Baltimore.

The conflict pits flamboyant businessman Fred Weisman, 78, against the nation's leading Japanese auto retailer. In an added twist, Robert McCurry, Toyota Motor Sales executive vice president, is a former Mid-Atlantic general manager. He left after a dispute with Weisman in 1981.

For Toyota dealers, the takeover could be seen as a chance to be on equal footing with those dealers in other areas who deal with Toyota directly. Others dealers prefer to work with a middleman who understands the region and speaks for its dealers in a unified voice.

Mid-Atlantic, based in Glen Burnie, Md., serves 123 Toyota dealers in Pennsylvania, Delaware, Maryland, Virginia, West Virginia and the District of Columbia.

Weisman Co. claims Toyota is bullying the distributor and that Toyota misled Mid-Atlantic into believing the relationship was on solid ground. Weisman also charged that the company's prod-

Ford steps up ads to fight Chevrolet sales challenge

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

With Chevrolet breathing down its neck, Ford Division will kick in an additional $11 million to strengthen its dealers' advertising hand from mid-June until the end of August.

Ford officials announced their decision to dealer ad associations and ad agency representatives at a Ford Dealer Advertising Conference in LaCosta, Calif., last week.

Lincoln-Mercury sources say that division will give an additional $6 million to its Lincoln-Mercury Dealer Association groups during July and August. L-M dealer associations will use the money to advertise their "Showtime Celebration" sales promotion, according to the L-M sources.

Persons who attended the Ford Dealer Advertising Conference said Ford Division wants the entire $11 million in factory money spent on cars. Sources say the "special bonus" (presumably the $11 million) will apply to ads run from June 18 to Aug. 31. Dealer associations must match factory contributions. The amount dealer associations receive depends on how much they spend. The money must be spent by the end of August.

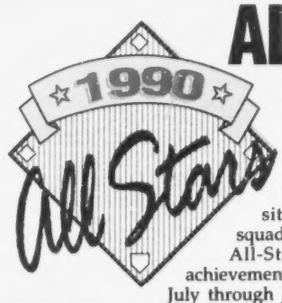
ALL-STARS: *Eiji Toyoda leads our annual industry ballot*



General Motors and Toyota Motor Corp. rule 1990's *Automotive News* All-Star Team.

Including their operating units here and abroad, each of the auto giants gained seven positions on this season's classic squad.

All-Star selections are based on achievements in the 12-month period from July through June. Winners are chosen by votes of the *Automotive News* editorial staff.

Leading the 1990 dream team is Eiji Toyoda, chairman of Japanese auto company Toyota, who captured two positions: chief executive officer Asia and industry leader of the year.

Other players from Team Toyota who made the All-Star team are: Shoichiro Toyoda, chief operating officer, Asia; Robert B. McCurry, Asia firm's import executive; Makoto

The Cressida, shown at left, will be replaced in the United States by an all-new Crown, a higher-priced entry in Toyota's home market. It will replace the current Crown, right, which received a facelift last year.

NEW TOP TOYOTA

New wide Crown from Japan lineup will replace Cressida

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Toyota Motor Corp. will replace its flagship Cressida in the United States with the Crown, a car that ranks above Cressida in Japan, within the next 12 months, *Automotive News* has learned.

The Crown, which is due for a full body change, perhaps as early as November, was upgraded with a V-8 engine and facelift a year ago. The wider, more powerful Crown is scheduled to be sold by U.S. Toyota dealers.

A Toyota source confirmed the change, though it was denied by official sources in Japan and the United States.

For years the Crown has been an awkward-looking, Japanese-style luxury car. Its narrow dimensions were forced on it by tax regulations. But when tax reform took effect in April 1989, it not only lightened the tax burden on large cars, but also gave a sociological go-ahead to larger vehicles.

A wide-body Crown is now available, but it is built on the old, narrow chassis. At 69 inches, it is nearly 2.5 inches wider than the regular Crown.

Cressida was widened from 66.5 inches to 67.3 inches in its latest overhaul, but that remains short of what Toyota considers its primary competitor, the Acura Legend, which is 68.7 (coupe) and 68.9 (sedan) inches wide.

Cressida, although well received in other aspects, was considered too cramped in the interior, according to the Toyota executive.

It has been selling in the United States at the rate of just over 20,000 a year. The company hopes Crown will do better.

An earlier Crown was sent to the United States in small volume when Toyota began its export operation. It was deemed unsuitable for America and was soon withdrawn. The car was exported to Europe in the 1960s and 1970s, but it was not a sales success there either.

Transplant wages will rise to match any gains at Big 3

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Honda of America Manufacturing Inc. had a goal last year: outperform and out-pay Ford Motor Co. in employee profit sharing checks.

Honda met its objective. Its workers received an average $1,601 in 1989 profit sharing, compared with $1,025 for Ford workers.

"The year before, Ford won," said Honda spokesman Roger Lambert. "So we decided to get into a contest with Ford on that issue."

Honda, a non-union shop that hopes to remain that way, plans to keep the contest close.

"We don't live in a vacuum; we're aware of what the industry is doing," Lambert said. "We intend to be competitive, and we know we are."

"Competitive" means more than making competitive cars. It means offering wages and benefits in the same ballpark as the unionized Big 3 automakers.

When the UAW and the Big 3 negotiate a new national contract this summer, the transplants will not be far behind, whether unionized or not.

Big 3 officials say they can't add to labor costs because they have to compete with the Japanese transplants. And no matter how high the wages and benefits, the transplants will still enjoy cost advantages of having newer work forces.

Says Ford spokesman Dick Routh: "The transplants have no pensions, little vacation and little health care to pay."

Of the seven U.S. transplants, four have no retirees, Honda has fewer than 100; Nissan Motor Manufacturing Corp. U.S.A. has one, and New United Motor Manufacturing Inc. (NUMMI) has four.

Based on figures supplied to *Automotive News* from the manufacturers, the unionized shops still pay the best hourly wage rates.

Counting purely straight wages including cost of living allowances, NUMMI, the General Motors-Toyota Motor Corp. joint venture, pays the highest hourly rate for production workers, followed by the Big 3 and then the other transplants. NUMMI also pays the highest wage for skilled trades workers, followed by Ford and GM.

But add all cash components such as bonuses and profit sharing, and some rankings change.

See WAGES, page 60

PRODUCTION WORKER PAY

Table assumes straight-time work of experienced worker, plus all bonuses and profit sharing

GM, Chrysler join Ford price hike

DETROIT — Despite sluggish sales, General Motors and Chrysler Corp. have followed Ford Motor Co. in raising prices. The GM and Chrysler hikes are effective today.

GM prices went up an average of $83, or 0.5 percent, on cars and light trucks. The car boosts range from $66 on intermediate models like Chevrolet Lumina and Oldsmobile Cutlass Supreme to $165 on Cadillac DeVille.

Chrysler's increases range from $60 on Dodge Daytona and most Chrysler LeBarons to $160 on Chrysler Fifth Avenue and Imperial. Plymouth Voyager and Dodge Caravan minivans went up $118.

Chrysler did not raise prices on Plymouth Sundance/Dodge Shadow and Dodge Monaco/Eagle Premier. Also unaffected were Plymouth Laser and Eagle Talon.

Chrysler and GM followed Ford Motor Co. along the price path. On June 15, Ford raised prices of most cars $58 to $123.

GM and Chrysler hiked destination charges. GM's went up $10 across the board. Chrysler's rose $30 on Fifth Avenue and Imperial and $15 on others. Monaco and Premier are unchanged.

The Big 3 raised prices despite lackluster sales. Through May 31, deliveries of domestic cars were down 17.46 percent for Chrysler, 12.23 percent for Ford and 6.07 percent for GM, compared with the first five months of 1989.

Industry price analysts consider price hikes at this time of the model year an effort to lessen the amount of the price increase for the upcoming model year.

Awareness of the forthcoming facelift for the XJ-S, which has not been restyled since its debut 15 years ago, has been a factor in the 22 percent drop in British Jaguar registrations in the first five months of this year. Only minor exterior changes are planned for the new model, as can be seen the photograph above.

JAGUAR: *U.S., Europe sales buck downslide trend, but chief Hayden says there's much to do*

By Daniel Ward
STAFF CORRESPONDENT

COVENTRY, England — William J. Hayden, the former Ford of Europe manufacturing vice president, is firmly at the helm of Jaguar after a three-month handing-over period.

The new chairman and chief executive admits that "there is a fair amount to do."

The original forecast for Jaguar sales in the United States this year was 20,000 units. The total now is expected to be "closer to 19,000."

Hayden

Jaguar bucked the trend in the first five months of this year in the United States, with sales climbing to 7,918 from 7,477 for the same period last year.

Hayden has already visited America twice to talk to Jaguar's U.S. dealer council and to spend time at a number of dealerships. In September, he will fly to Japan to see Jaguar dealers.

The U.S. dealers were "staggered by my honesty," Hayden says. He was pleased by the decision of several dealers to go ahead with major investment in new facilities, a decision they had held in abeyance while waiting to assess Jaguar's prospects under Ford ownership.

Reaction from the U.S. dealer council to a long and detailed presentation was "extremely positive," Hayden says. They took the

Pres. Bush moves his lips; imports call for carbon tax

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — President Bush's softened stand against higher taxes has boosted the auto import contingent's hopes of garnering support for a so-called carbon tax.

The president last week strayed from his campaign pledge of no new taxes and said higher tax revenues may be needed to reduce the federal budget deficit. This could lead to higher consumption taxes on such items as gasoline.

The Motor Vehicle Manufacturers Association said if the current federal gas tax of 9 cents a gallon were to rise to 25 cents, it would have little impact on car sales.

"There are far more serious issues for us to worry about," said Tim MacCarthy, a lobbyist for the Motor Vehicle Manufacturers Association.

But import interests have been pushing the idea of taxing fuels on the amount of carbon they contain.

The American International Automobile Dealers Association and the Association of International Automobile Manufacturers believe a carbon fee is a better way to discourage the driving of gas-hungry cars than a higher corporate average fuel economy standard.

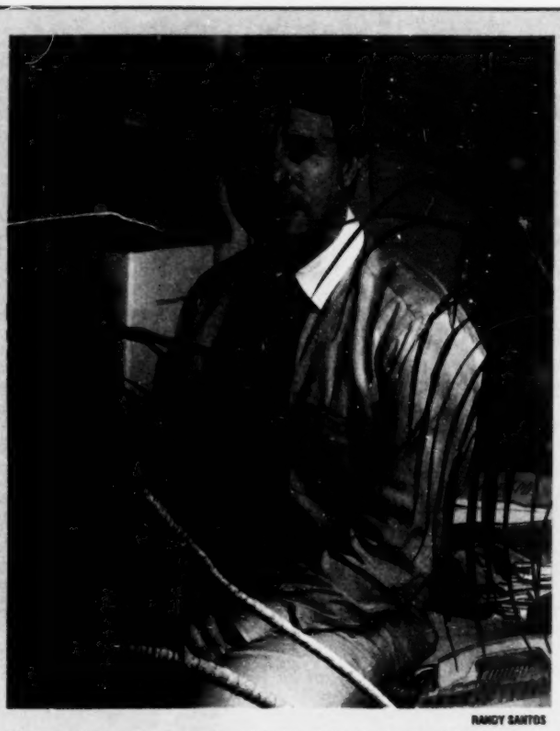
"Several months ago we didn't know if (a carbon tax) was viable," said Walter Huizenga, president of AIADA. "Now that the administration had indicated a willingness to look at tax increases, we want to put this forward as a method of regulating fuel economy."

Huizenga said import dealers and manufacturers would otherwise not support a gasoline tax.

A bill proposing a carbon tax, which would translate into about 8 cents per gallon of gasoline, was introduced in May by Rep. Pete Stark, D-Calif. The legislation is receiving serious consideration in the House Ways and Means Committee, said a spokesman for Stark. But he warned that Stark proposed the tax to address global warming, not as a deficit-reduction tool. Carbon dioxide, a byproduct of burning gasoline, is thought to contribute to global warming.

Correction

In a table in the June 25 issue, the May 1990 imported-car sales figures for Geo Metro and Geo Storm were reversed. The correct totals are 3,970 for Geo Metro and 9,680 for Geo Storm.



RANDY SANTOS

Clarence Ditlow, the executive director of the Center for Auto Safety, may be soft-hearted when it comes to his office palm tree, but when you're talking automakers, he's 100-percent tough guy.

DITLOW: *Safety czar is thorn in industry's paw*

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Clarence Ditlow III winces as he tries to explain the twisted palm tree that commands a prime spot in his cluttered office.

He could have easily tied the trunk to a pole to set it straight, but "somewhere along the line, I didn't exercise enough discipline," he says with a smile. "I'd do that if I was a tough guy, but I'm not a tough guy."

Tell that to the auto companies.

For 14 years the soft-spoken executive director of the Center for Auto Safety has been a thorn in the industry's paw.

Last week was no different. On Monday, Ditlow joined other safety advocates in calling for a Jeep CJ recall. Later in the week, he was knocking at the Federal Trade Commission's door and accusing Nissan of offering secret warranties.

The center celebrated its 20th anniversary last month. Ditlow, 46, has endured in the face of critics in the industry and the automotive buff press who say he's an engineering illiterate who lives only to feed — and be paid by — hungry trial lawyers.

In another camp are people like Vernon R. Brinkley, a Virginia printer. He blames a defective rear tailgate on his 1979 Jeep Wagoneer for strangling his 13-year-old son, Howell Keith, a decade ago.

Brinkley settled his suit out of court and had just about

Mitsubishi tags Eclipse for Europe

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

Mitsubishi Motors Corp. is finalizing plans to sell its U.S.-made Eclipse coupe in Europe.

If regulatory approval is granted in the next few months, Mitsubishi could become the first Japanese carmaker to export a U.S.-made vehicle to Europe.

With 60 percent U.S. content, the Eclipse would count as an American product for trade purposes in many European markets, sidestepping restrictions against Japanese imports. Ironically, the 60 percent U.S. content makes the car an import in the United States.

A spokesman for Mitsubishi's U.S. operations said the as-yet incomplete export plan will probably involve shipping about 200 Eclipses a month that will be divided among United Kingdom, Germany, Switzerland and Austria. The company believes Germany will be a particularly strong market, based on projections from dealers there, he said.

Earlier this year, Honda of America Manufacturing Inc. said it will export its new Accord station wagon to undetermined European markets in the 1991 model year. But it now appears that Mitsubishi could be the first U.S. transplant manufacturer to send Japanese-badged cars to Europe. The Ford Probe, built by Mazda Motor Manufacturing (USA) Corp., is scheduled to be sold in Germany late this year.

Mitsubishi is producing about 6,800 Eclipses a month at Diamond-Star Motors Corp. in Normal, Ill., a 50-50 joint venture with Chrysler Corp. The Japanese carmaker already exports a small number of the cars to Japan and Taiwan and expects to sell about 80,000 Eclipses through U.S. dealers this year.

As many as 200 Mitsubishi Eclipse cars may be sent monthly to Western Europe from Diamond-Star Motors in Illinois.

Chrysler also gets about 6,800 Eclipse-based Plymouth Lasers and Eagle Talons a month from the plant and has alluded to its own interest in exporting those models to Europe. A Chrysler spokeswoman said, "Europe possess some interesting opportunities for our Diamond-Star Motors cars, but at this point we have neither a final decision nor a timetable."

Trial production of Honda's Accord wagon has begun — slightly ahead of schedule — at Honda's Marysville, Ohio, plant, the exclusive manufacturing site for the wagon. Plans call for mass production to begin in November.

In previous cases where Honda has exported a North American-made vehicle to Asia, the car was distributed to U.S. dealers first. If the company holds to that procedure, exports of the wagon would not begin before early 1991.

The Mitsubishi spokesman said the export program depends on regulatory clearance by each country on such matters as vehicle emissions, bumper standards and signals. He said no problems are likely, especially regarding emissions, because U.S. requirements are stricter than Europe's.

Each Japanese plant in the United States either has plans to export vehicles to Asia or has begun shipments.

In addition, Nissan Motor Manufacturing Corp. U.S.A. said it has considered exporting its upcoming redesigned Sentra to Europe from Tennessee, but has no current plan.

KOREA'S EXPORT SLUMP

What goes up must come down. But with the export machine out of steam, many are starting to ask, 'How far is down?'

By Oles Gadacz
STAFF CORRESPONDENT

SEOUL, South Korea — As recently as 1988, the sky seemed the limit for the Korean Big 3 — Hyundai Motor, Kia Motors and Daewoo Motor.

They were riding high. Their sales in the United States shot through the roof as $3.7 billion worth of Korean-made cars — 576,134 units — were exported worldwide that year.

The Japanese and the U.S. Big 3 were rattled by the fast inroads made by the Koreans, and many automotive analysts pondered the Korean threat to take over the subcompact market.

Those foreign fears and Korean enthusiasm began to fade in 1989 as the Korean export machine ran out of steam. Exports dipped to 356,050 units valued at $2.7 billion.

The situation has deteriorated further this year. In the first four months of this year, 85,594 units were exported, according to the Korean Automobile Manufacturers Association. That was an average of 21,399 a month compared with 29,671 a month in 1989 and 48,011 a month in 1988.

Many are wondering what has happened to Korea's showcase industry and whether it will recover.

It might be rash to rule out the Koreans as a spent force, given the disciplined, well-educated nature of the work force and the im-

Chrysler has high hopes for 3rd rental firm

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Corp. anticipates a substantial increase in sales of vehicles to Dollar Rent A Car Systems Inc. following the automaker's purchase of the rental company this summer.

Pentastar Transportation Group Inc., a wholly owned subsidiary of Chrysler Corp., is expected to complete the purchase of the Dollar rental system by Aug. 15.

The two companies said last week that purchase agreements have been signed. The purchase price was not disclosed.

Dollar is nearly twice as large as Thrifty Rent-A-Car System Inc., which Chrysler bought for $263 million in 1989. Dollar, which has about 1,000 locations, had revenue of $600 million in 1989. Chrysler in 1989 also bought Snappy Rental Inc. for $40 million.

Chrysler vehicles now represent 20 to 25 percent of Dollar's average rental fleet of 80,000 vehicles, according to a Chrysler spokesman.

A spokesman for Pentastar Transportation Group said the company anticipates that 70 to 80 percent of Dollar's fleet will be Chrysler vehicles within a year. More than 95 percent of Dollar's franchisees are independent operators, and Pentastar is aware that "they can't be forced to buy Chrysler products."

"But we have the ability to structure the marketing arrangements that will make the franchisees want to tie into Chrysler products," the spokesman said. "It is more than car and price. It has everything to do with delivery, vehicle mix, national advertising, order handling, how we service the franchisee. We plan to structure a very competitive package."

Said the Chrysler spokesman, "If you have the keys to the house, you don't have to stand on the porch knocking." But he spokesman cautioned that the number of additional sales made to Dollar will depend on the competitiveness of the daily rent-a-car market.

Earlier this year, Chrysler attributed part of its current sales decline to the company's unwillingness to cut profits by discounting daily rental fleet units. For example, Chrysler allowed Thrifty to purchase a large number of vehicles from Mitsubishi Motors Corp. rather than purchase higher-priced Chrysler vehicles.

"When we couldn't compete on price, we didn't compete," the Chrysler spokesman said.

Chrysler's three rental car systems are expected to continue to operate independently and to complement each other.

Dollar has operations at airports, while Thrifty is an off-airport network. Snappy supplies temporary replacement vehicles for persons whose cars have been stolen or are being repaired after a collision.

Value deal final

CYPRESS, Calif. — Mitsubishi Motor Sales of America Inc. has completed its purchase of a controlling interest in Value Rent-A-Car Inc. last week, becoming the first automotive importer to take control of a daily rental company in the United States.

Mitsubishi hopes the acquisition of the Deerfield, Fla.-based company will increase awareness about its products and provide low-mileage vehicles for Value's used-car operations. Value has 25 locations in Florida, Georgia, [illegible], Alabama, Colorado and Arizona.

— Roger Lenz, Detroit

Alabama may be home to Nissan engine plant

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

THACH, Ala. — Nissan Motor Manufacturing Corp. U.S.A. is considering building an engine plant near this north Alabama farming crossroads.

The No. 2 Japanese carmaker is using a local industrial-development agency to quietly stake out as much as 1,000 acres for a plant between Thach and Athens, Ala. The site is about 90 miles south of Nissan's existing U.S. plant, in Smyrna, Tenn.

A spokeswoman for the manufacturer acknowledged only that Nissan is conducting a "feasibility study" for an Alabama plant and is conducting similar studies at numerous sites.

If approved, Nissan's second plant will produce major engine components, complete with machining and assembly, said Gail Neuman, general counsel for Nissan Motor Manufacturing. The plant will not have component-casting capabilities, she said.

Residents in the area, known for its rich cotton fields, confirmed that they have been approached by the Athens-Limestone County Industrial Development Association — a local economic development agency — on behalf of Nissan, seeking to option approximately 1,000 acres.

One landowner said he was told that Nissan wanted to build a vehicle-assembly plant, employing up to 4,000 workers.But Neuman said that no vehicle plant is under consideration and that the components facility in question would employ "nowhere near that many people."

Nissan currently assembles four-cylinder engines in Smyrna from Japanese components to supply the 120,000 Sentras it builds annually. In 1992, the Smyrna plant will also begin producing about 240,000 Stanzas annually.

At the same time, Nissan has committed to supply about 135,000 six-cylinder engines a year to Ford Motor Co. for a new minivan to be assembled by Ford in Avon Lake, Ohio, for both companies.

Nissan currently produces pickups in Smyrna with engines imported from Japan and Mexico.

News of the carmaker's activities has already ignited a land speculation boom of sorts in and around Thach. In the past two weeks, asking prices for some commercial property in nearby Athens rose from $5,000 an acre to $25,000 to $30,000 an acre.

Mid-June car and truck sales rise

Extra selling day helps makers, but Chrysler slips anyway

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Every domestic automaker except Chrysler Corp. posted a sales gain for mid-June, boosting total vehicle sales 8.49 percent over last year.

Both car and truck sales were up for the 10-day period, but an extra selling day accounted for the gain in each category. There were nine selling days in mid-June this year and eight in 1989. The daily vehicle selling rate was down 3.57 percent.

Japanese transplant sales generally soared in the 10-day period.

Overall, mid-June sales totaled 339,797 — 211,023 cars and 128,774 trucks. Car sales were up 7.71 percent; truck sales rose 9.79 percent.

But the daily selling rate showed a dip of 4.26 percent for cars and 2.41 percent for trucks.

General Motors and Ford Motor Co. needed the extra day to top last year's performance in both cars and trucks.

GM's car-truck sales were up 6.01 percent, paced by Pontiac and Cadillac. Pontiac's car sales jumped 45.33 percent. Sunbird and Grand Prix were especially hot, up 71.89 percent and 127.78 percent. Cadillac posted a gain of 36.76 percent.

Sales of the Geo Prizm and Lumina continued to soar, but Chevrolet's total car sales were down 5.87 percent.

On a daily-rate basis, GM's car-truck sales were off 5.77 percent from last year.

Led by a 16.97 percent increase in truck sales, Ford Motor Co.'s total vehicle sales rose 9.95 percent. But Ford's daily selling rate for cars and trucks was down 2.27 percent.

Sales of the Ford Escort, Taurus, Thunderbird and Probe, which had been lagging most of the year, rose slightly. The Lincoln Town Car continued to sell well.

Chrysler Corp's's sales slumped 4.97 percent with cars off 8.03 percent and trucks down 1.96 percent. The daily selling rate for cars and trucks dipped 15.53 percent.

The Chrysler brand was Chrysler Corp.'s only gainer on the car side. Dodge trucks were up, and so were Chrysler and Plymouth minivans.

Each of the transplants reported car sales increases on both an absolute and a daily-rate basis.

Toyota chalked up an advance of 83.75 percent in sales of U.S.-built cars. Honda, up 81.94 percent, was next. But Honda was the volume leader, 11,280 to 7,936.

Mitsubishi's sales rose 70.71 percent, and Mazda notched a gain of 53.89 percent in sales of U.S.-built cars. The 626 series did the job for Mazda; sales of the MX-6, Mazda's only other domestic car, fell 41.38 percent.

Nissan had a healthy rise in both car and truck sales. Car deliveries rose 34.44 percent, and truck sales moved up 22.03 percent.

There were 9 selling days in the period this year and 8 last year.

Panther has halted production of its Kallista two-seater in order to concentrate on the introduction of the Solo, pictured here.

CAGED PANTHER

Solo delayed again; composite body supply woes continue

By Daniel Ward
STAFF CORRESPONDENT

LONDON — The Panther Solo sports car, already nine months late, has hit more roadblocks.

Panther Car Co., owned for the past three years by Ssangyong Group of South Korea, has undergone a change of top management and the work force has been cut from 133 to 105.

The first Solo should have been delivered to a customer last October, but it was delayed four months because of the need to re-source the chassis from a British supplier to Ssangyong in Korea. Panther confirms that only one further car has been delivered.

Panther announced within the past month that it will halt production of the nostalgia-style Kallista two-seater in order to concentrate on the introduction of the Solo sports model.

Ssangyong has decided to build a pilot run of 24 Kallistas at the Pyongtaek plant of Ssangyong Motor, with a view to possibly putting the vehicle into full production. The Korean company previously built Kallista bodies and chassis, which were then shipped to Panther's Harlow, England, factory for assembly.

Panther is facing major problems with the supply of the high-technology composite body for Solo. It is proving very difficult to make to the required quality, according to sources at Panther.

Mike Newman, Panther managing director for the past three years, left the company a few weeks ago, according to his successor, B.U. Kim, who was previously Panther finance director.

It is understood that Newman's failure to bring the project to production resulted in his contract not being renewed.

The enduring production problems raise the question of how long Ssangyong will fund Panther. According to one informed source, losses have now climbed to £30 million ($51.5 million).

Kim would only comment, "During the development period of Solo and with Kallista production not contributing sufficient profits, Panther Car Co. was in need of operating capital.

"However, the company expects to turn around with the successful Solo and its future evolution models."

Automotive News Staff Correspondent Oles Gadacz in Seoul, South Korea, contributed to this report.

1st East German auto show ushers in currency switch

By Knut Moberg
STAFF CORRESPONDENT

LEIPZIG, East Germany — More than 500,000 people attended East Germany's first auto show, held here on the eve of currency union between the two Germanys.

Known as Auto-Vision, the show was mainly a presentation by the West European and Japanese auto industries. Only six East German companies had stands, and there were no stands for Wartburg or Trabant. Oddly, in view of the quickening integration between East and West Germany, BMW was the only West German company present.

A spokesman for the organizers, KPS Messe, of Bremen, West Germany, said many automakers were unable to make a decision on whether to exhibit in the time available. Many were handicapped by having already allocated 1990 budgets. The show was organized in only a few months.

Nevertheless, there are plans to have a show here every year. It will be the third major show in Germany after Frankfurt and Berlin.

Nowhere in Europe is there such interest in cars as in East Germany, where until this year people waited 16 years for delivery of an old-fashioned Wartburg or Trabant.

The Leipzig show was, therefore, a big adventure for the East Germans. People traveled from all over the country and from Poland and Hungary.

Parking lots around the exhibition hall were packed with old and dull East European cars. Inside were the world's most modern vehicles.

For a few hours, the visitors could inspect the cars and dream.

One visitor commented, "This is just like making a presentation of the best-known French food in the poorest country in the world."

Japan's automakers made a big splash, with large stands taken by the West German importers of Mazda, Suzuki, Subaru, Nissan, Honda and Toyota. The Japanese do not sell cars in East Germany.

The French industry was strongly represented, with stands displaying Renaults, Peugeots and Citroens. Both Swedish producers, Volvo and Saab, which have sold in East European countries for several years, were well represented in Leipzig.

Fiat and Alfa Romeo were also present.

The U.S. companies and their European subsidiaries skipped the show, but the big surprise for visitors was the paucity of German companies.

But Volkswagen AG, which is building a big dealership between the airport and downtown Leipzig, had a lot of models on display alongside the building materials. It attracted many visitors.

Of the East European cars, only the new Skoda Favorit from Czechoslovakia and Lada from the Soviet Union were in Leipzig.

The Ladas were presented by the West German importer — a major change for East Germany, which had such close ties to the Soviet Union.

Detroit Diesel to produce natural gas, alcohol engines

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Detroit Diesel Corp., a major supplier of transit bus engines, plans to offer a variety of alternative powerplants to that market in 1991.

They include alcohol-fueled and compressed-natural-gas engines as well as diesel engine.

Detroit Diesel's product offerings are predicated on the assumption that the stringent 1991 EPA standards for heavy-duty urban bus engines will remain in effect as they are published today.

According to the EPA standards, heavy-duty urban bus engines produced after Jan. 1, 1991, must meet a nitrous oxides standard of five grams per brake horsepower/hour and a particulate matter standard of 0.1 g/bhp/hr.

Detroit Diesel is also prepared to meet provisions of both the proposed Senate and House Clean Air Act amendments, which are currently before the U.S. congressional conference committee, according to David Merrion, Detroit Diesel senior vice president for engineering.

Detroit Diesel plans to offer five lines of 1991 transit bus engines.

They are diesel-fueled 6-71TA DDEC and 6V-92TA DDEC engines; diesel-fueled 6V-92TA DDEC engines with aftertreatment devices; alcohol-fueled 6V-92TA DDEC engines; alcohol-fueled 6V-92TA DDEC engines with catalytic converters and compressed-natural gas-fueled 6V-92TA DDEC engines with diesel fuel as the ignition source.

Detroit Diesel has a fleet of 54 units with compressed-natural-gas engines in the field and can produce as many as the transit bus industry may require next year, according to a company spokesperson.

It has a signed commitment to supply 400 particulate-trap-equipped buses to the New York Transit Authority as well.

Beginning Jan. 1, 1991, it will offer its 6V-92 turbocharged and aftercooled engine, currently a standard of the transit industry, along with the 6-71TA engine.

Its plan to offer diesel engines in 1991 and 1992 is contingent on the adoption of the proposed EPA rule allowing banking of emissions credits from prior years.

If the rule is passed, Detroit Diesel's diesel engines could be available due to their significant reduction of emissions in 1990.

By meeting a lower emissions level and setting a family emissions limit, Detroit Diesel began banking emissions credits in January 1990.

As a result, it could have enough credits to allow continued sale of diesel-fueled engines well into 1992, Merrion said.

Detroit Diesel will offer the 6V-92TA diesel engine with an aftertreatment device, a particulate trap, that will meet the 0.1 particulate level, beginning in mid-1991.

Next year, it will offer the 6V-92TA engine, capable of operating on alcohol fuels such as methanol and ethanol and compressed natural gas.

The 6V-92TA engine will comply with the 1991 emissions limits and will be available with or without a catalytic converter.

The converter allows the option of having even lower unburned methanol/ethanol emissions and lower aldehyde emissions.

The alcohol-fueled engine without a catalytic converter will be available Jan. 1, 1991. The same engine with a converter will become available in early 1991.

The 6V-92TA capable of operating on natural compressed gas will be a dual-fuel engine, using diesel fuel as the ignition source for the compressed gas. It will become available in June 1991.

The engines all carry a five-year/100,000-mile warranty, whichever comes first.

Each engine will be fully emissions-certified and backed by the company's distributors for parts and service.

TRUCK BRIEFS

Allied restructures

Allied-Signal Automotive has realigned two of its primary business groups which supply the global heavy truck industry.

The Bendix Heavy Vehicle Systems Group and the Garrett Automotive Group, which also supplies the global car industry, remain as separate entities, but some key top management functions will be consolidated.

George A. Jovan, Bendix Heavy Vehicle Systems vice president and group executive, also became group executive of Garrett.

Consolidated within the two operating groups were North American operations and product support, worldwide information systems and services, and finance and employee relations activities.

The research, engineering and marketing activities of both groups will remain separate in order to continue their responsiveness to the needs of their respective customer bases, according to John W. Day, president of Allied-Signal.

Richard M. Bourgerie, former president of Garrett Automotive, resigned to pursue other interests.

Day said the organizational changes will be beneficial to the two business groups since their customer bases, manufacturing operations and product lines are essentially complementary; and they both serve global markets from bases in North America, Europe, Latin America and the Far East.

Bendix supplies air brake system components, anti-lock braking systems, electronics and engine accessories to heavy truck and engine manufacturers.

Garrett Automotive supplies charge air systems (turbochargers and chair air coolers) for commercial diesels and cars.

UPS expands outlets

GREENWICH, Conn. — UPS Truck Leasing has opened a second facility in Jacksonville, Fla., its 11th operating location in the state.

A wholly-owned subsidiary of United Parcel Service, UPS Truck Leasing maintains a fleet of over 3,000 lease and rental vehicles from 28 locations in six states. It plans additional openings in 1990.

SERVICE MANAGEMENT

Air bags pose health hazard for service personnel

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

While air bags are designed to protect occupants of a vehicle involved in an accident, they could pose health problems if not handled and disposed of properly.

Service employees and owners of repaired cars face dangers from toxic chemicals if a deployed inflator and module are not properly removed and the vehicle is not properly cleaned, according to the Greater Rochester (N.Y.) Auto Craftsman Guild, which includes 110 independent body shop owners.

The inflator is the gas-generating device of the air bag. The module is the component that contains the inflator, cushion and other parts fitting into the steering wheel or instrument panel.

Because of the air bags' potential danger and independent shop owners' lack of free access to auto factory service manuals and bulletins, the guild issued a warning to shops and repairmen about working on vehicles equipped with either deployed or live air bags, said Anthony Sofia, guild president.

The devices are standard on all cars Chrysler Corp. makes in the United States, about half of Ford Motor Co.'s cars and about 15 percent of General Motors' cars.

"Air bags are not just filled with air," Sofia said. "Because of the need to activate instantaneously upon impact, they are triggered by, and contain, toxic chemicals that should be avoided."

The automakers have issued manuals to owners and dealers, describing how air bags work and what precautions to take while working near them. They also point out that failure to follow directions could result in injury.

The public and shop owners can purchase dealer service manuals. They can also obtain the bulletins on a subscription basis.

The factories also publish brochures with procedures that should be followed if air bags are deployed, precautions similar to those issued by the guild's.

Although factory manuals and bulletins are not sent directly to independent shops and regional shop associations, Sofia said the information is "usually made available to officials of national associations" who, in turn, forward it to local groups.

Nevertheless, Sofia criticized automakers for not alerting independent shops to the potential health risks posed by air bags.

The guild's alert is based on guidelines for handling deployed air bags issued by Morton International Inc. of Ogden, Utah, an air-bag manufacturer.

The guild said when a bag is fired, small amounts of sodium sulfide, molybdenum nitride and sodium/sodium hydroxide remain.

"Because of the potency of these chemicals and the hazards commonly associated with fired inflators and modules," Sofia said, "the guild recommends that no heat be applied in removing these units, and that impervious gloves, masks and goggles be used to prevent possible inhalation of noxious materials and eye injuries.

"Fired modules should be stored in proper containers and removed from the premises by a hazardous waste disposal company," Sofia said. Cars contaminated by fired air bags should be vacuum cleaned and all interior surfaces thoroughly wiped down with a water-moistened cloth. This waste should be similarly disposed of," he said.

According to Morton International, if a loaded inflator has been removed from the vehicle, it can be sent to a recycling facility that can fire and recycle the unit, it can be fired remotely or it can be shipped to a permitted hazardous waste disposal facility.

Rescue crew told, 'Disconnect battery'

MILFORD, Mich. — Rescue crews working on a car equipped with air bags should disconnect the vehicle's battery to assure that the safety devices don't deploy accidentally, according to service bulletins issued by automakers.

U.S. and Canadian firefighters and ambulance personnel gathered at the General Motors Proving Ground June 12 to use crash-test cars to practice roadside rescue techniques. They also learned about new technology in cars including air bags.

Some of those attending said they were concerned about armed air bags deploying during rescue operations.

"You don't put yourself between an (undeployed) air bag and the victim," said Ken Jones of Owen Sound, Ontario, who is a member of the Ontario Fire Marshal's Office. "The information about the (new) technology of the cars nasn't been disseminated to us."

The Big 3 have issued dealer service bulletins on air bags and included data in owner's manuals. The material describes how the devices work and what precautions to take while working near them, and it warns that failure to follow directions could result in injury.

"If somebody is there with their nose against the bag and the thing goes off, I guess somebody might get injured," said GM spokesman Don Postma.

The cardinal rule, automakers say, is to disable the car's electrical system, which powers the air bag.

In a garage, operators can disable an electrical system and air bag by unbolting battery cables.

A crash complicates that procedure.

If it is difficult to locate the battery or determine if its cables are intact, automakers recommend going under the steering column to disconnect the air bag.

Shop volume tops 1989 in May

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Service and parts volume in new-car dealerships dropped slightly in May from the April pace, but still showed a moderate gain over May 1989.

According to the Automotive News Service Index, May service and parts business amounted to 104.2 percent of the business dealers recorded in May 1989. In April, the volume was up 10.1 percent over that for April 1989.

May was the fifth consecutive month to show an increase over the year-earlier service and parts volume. It also marked the first time in four months that all five indicators in the Service Index failed to show increases.

The only indicator that did not register an increase for the month was repair orders written. The average number of orders written in new-car dealerships was off 2.2 percent from the year-ago total, the survey found.

SERVICE INDEX
104.2★

	May '90 vs. May '89	Jan.-May '90 vs. Jan.-May '89
Gross Profit on All Labor and P&A Sales	+ 4.5%	+ 7.0%
Repair Orders Written	– 2.2%	+ 0.5%
Total Labor Sales (Customer & Warranty)	+ 4.7%	+ 8.1%
Shop Parts Sales (Customer & Warranty)	+ 8.7%	+ 8.4%
Sales of All P&A	+ 3.4%	+ 8.9%

★ Survey by Automotive News shows that dealers' service and parts business in May 1990 was 104.2 percent of business in May 1989. Service business in the first 5 months of 1990 was 108.7 percent of business in the corresponding period in 1989.

Shop parts sales for customer-paid and warranty repairs scored the biggest gain in May with an increase of 8.7 percent over the year-ago figure, followed by total labor sales (customer paid and warranty), which were up 4.7 percent.

Gross profit on all labor, parts and accessory sales — the most important indicator from the dealers' viewpoint — was 4.5 percent above last year's profit; while sales of all parts and accessories topped the year-earlier figure by 3.4 percent.

Some dealers attributed the increase to owners having their vehicles repaired rather than buying new ones. Others cited increases in body shop and warranty work.

Figures used in the Service Index are averages compiled from reports on shop operations from a cross-section of the nation's new-car dealerships.

Dealer service and parts business for the first five months of 1990 was up 8.7 percent over the same 1989 period.

The year-to-date indicators lined up this way: Sales of all parts and accessories, up 8.9 percent; shop parts sales, up 8.4 percent; total labor sales, up 8.1 percent; gross profit, up 7.0 percent; and repair orders written, up 0.5 percent.

Mercedes eliminates emergency-help fee

MONTVALE, N.J. — Mercedes-Benz of North America Inc. has sweetened its 24-hour Roadside Assistance Program coverage by eliminating the service charge for on-site aid.

Additionally, owners with cars still covered by the company's standard 48-month/50,000-mile new-car warranty can receive reimbursement for travel, meals and lodging if a mechanical problem covered by the warranty requires overnight service. Also, free trip routing will be available for the first time under the program.

"We have been pleased by the success of our program in the past, and these enhancements will make it even stronger," said Karl-Heinz-Faber, senior vice president for product compliance, service and parts for Mercedes-Benz of North America.

"Roadside Assistance is one example of how we, as manufacturers, work together with our dealers to provide the service our customers deserve," Faber said.

More than 400 of the company's 422 dealers participate in the program, he said.

Under the revised program, Mercedes-Benz and its dealers will provide a free tire change in case of a flat, a jump-start for batteries and delivery of two to three gallons of fuel to any owner/driver of a Mercedes-Benz car, regardless of the vehicle's model year or mileage, or whether it was purchased new or used.

Trip routing, available to owners whether or not their cars are under warranty, offers computerized routing, road maps, a listing of authorized Mercedes-Benz dealers along the travel route and phone numbers of hotels, airlines and rental agencies.

Reimbursement for travel interruption for vehicles under warranty is limited to $300 per night for a maximum of three nights, if the mechanical failure occurs more than 100 miles from the driver's residence.

Mercedes-Benz of North America started the Roadside Assistance Program in 1984, after three years of testing. It covers all Mercedes-Benz cars in the United States, currently more than 1.2 million.

SERVICE BRIEFS

Battery recycling pushed

TROY, Mich. — K mart Corp. and Exide Corp. are trying to make auto owners more environmentally conscious.

They are co-sponsoring a nationwide recycling program to reduce the potential environmental safety problems of batteries that are disposed of improperly.

Consumers are being offered $2 for any junk automotive or marine battery returned to any of K mart's 2,200 stores nationwide.

Exide will recycle the lead and plastic from discarded batteries to manufacture new battery products. There are an estimated 40 million junk batteries in the United States.

Glass repair urged

CHICAGO — Insurance companies could save over $144 million annually in claims if windshields were repaired instead of replaced.

More than eight million windshields will require repair or replacement in 1990, according to Vincent J. Romans, vice president of marketing and planning for Globe/U.S. Auto Glass Centers and USA-GLAS Network. The company markets Clear Fix, a process for repairing small breaks outside drivers' critical view area.

According to Romans, the average cost of replacement is $205, compared with $40 for repairing a windshield with the process.

Mazda realigns divisions

IRVINE, Calif. — Mazda Motor of America Inc. has reorganized its service and parts functions along operations and support lines.

The realignment consolidates all service and parts support activities, such as administration, planning, parts supply and distribution, technical service and customer relations, within a single, new Service and Parts Division.

It will be headed by a vice president who will report to Clark Vitulli, chief operating officer.

Operations functions such as service and parts marketing, parts and accessories development and service and parts field activities, will be handled by a new service and parts marketing department that reports to George McCabe, group vice president for operations. He also reports to Vitulli.

"The changes will enable us to address increased customer demand for more convenient and responsive service," Vitulli said.

Porsche's top technician

RENO, Nev. — Matthew Hartsfeld of Lynch Imports Ltd. in Chicago won top honors in the Porsche Premier Technicians Competition sponsored by Porsche Cars North America Inc.

Hartsfeld, who achieved the highest score among 21 U.S. finalists in written and hands-on tests, will represent Porsche Cars North America in the finals in West Germany. There, technicians from 20 markets around the world will compete for top honors.

Brian acquires Comspec

DETROIT — Comspec has been acquired by William Brian, president of Budco, which provides marketing and distribution services to clients in the automotive, retailing and advertising industries.

Comspec writes and provides training programs for dealership technicians and testing and motivation programs for dealership sales personnel. Comspec's engineers and technicians also write service manuals for automakers.

Comspec International, a computer services subsidiary, offers consulting, systems analysis and design and programming services to automotive and non-automotive clients.

KOREA

FROM PAGE 3

pressive achievement of building an automotive industry almost overnight.

In many minds, it is really a question of when rather than if the industry will rebound to its previous heights.

Recover it must in the eyes of Korea's economic planners, who have put total faith in an export-led economic growth policy.

In this natural-resource-poor country, where long working hours and a willingness to sacrifice have made all the difference, a continued expansion of exports is held out as the only assurance of creating more jobs and continuing economic development.

With their high value-added content, cars are at the top of the government's list of export industries. Although auto exports have faltered, South Korea's Ministry of Trade and Industry is mapping new strategies to ensure the continued competitiveness of Korean auto exports in the 1990s and beyond.

"This industry has deep-rooted structural problems," says Chung Soon-Young, an economic specialist and transportation industry analyst with the U.S. Embassy in Seoul. Many would agree with Chung, who does not see chances for a major export recovery in the short term.

The blame is placed on labor problems, exchange rates, the soft U.S. auto market, Japan's U.S. transplants and Korea's lack of design and engineering prowess.

Start with Korea's autoworkers and their annual spring strikes, which have grabbed world headlines.

Backed by democratic reforms instituted in 1987 and expanded power for unions, workers have succeeded in winning nearly 75 percent in accumulated wage increases during the past three years — at the expense of declining productivity, some would add.

But there are signs that industrial unrest is stabilizing. While the U.S. media hasten to point their cameras at student-police clashes and striking workers, they have ignored the sizable decline in labor disputes this year.

Only 28 industry-related strikes were reported to the Ministry of Labor in May. That was down sharply from more than 100 strikes during the same period last year.

The rise in output at Japanese transplants in the United States during the late 1980s has added to the Korean industry's woes. Voluntary restraint measures speeded Japan's move upmarket and created an opening — albeit a temporary one — for Korean-made subcompacts.

About 15,000 Hyundai Motors workers in Ulsan, South Korea, protested the storming of the Hyundai Heavy Industries shipyard by police April 28. Labor problems are but one of the causes of the country's export problems.

But today, the Japanese are back and fighting in the U.S. subcompact market, aided by the production of their U.S. transplants. By contrast, Hyundai Motor has a single transplant, at Bromont, Canada, which recently began exporting Sonatas to the United States.

The won-yen-dollar exchange rate also has played havoc with Korean car exports.

"Part of the problem is that the yen's depreciation has outpaced that of the (Korean) won, and that is bad news for Korean automobile makers," said Prudential-Bache Securities in an April report on the Korean economy.

The won has gained against the dollar, moving from 890 won per dollar in 1985 to 680 won in 1989. For Korean automakers, a stronger won translates into reduced export earnings. To compensate, they have been forced to raise export prices.

There are doubts whether higher prices have translated into higher-quality cars. "Compared with Japanese cars, the (Korean) quality is just not there," says Todd Kilborn, an industry analyst with James Capel's Seoul office.

"The impression of U.S. car buyers is that a Korean car is cheap," he observes. "The Japanese have a reputation for building a quality machine."

Says a Big 3 auto executive stationed in Seoul, "Given the price parity that currently exists between Japanese and Korean cars, consumers automatically choose the Japanese model."

While the past price advantage appears to have all but slipped away, the pursuit of higher quality is being held back by the lack of independent engineering capability. Engine and drivetrain components, for example, are produced under foreign license, entailing royalty fees that erode profits.

"They are fettered by technology licenses," says the Big 3 executive.

Korean automakers always seek the latest technology from Japan, Europe and the United States. But that technology is not always available on attractive terms.

Exports climb for Kia; Hyundai, Daewoo dive

By Oles Gadacz
STAFF CORRESPONDENT

SEOUL, South Korea — The export slump has affected the Korean Big 3 in varying degrees.

● **Kia Motors** has best adapted to the changing climate. It was the only member of the Big 3 to increase auto exports in 1989, climbing from 78,340 units in 1988 to 95,018 in 1989.

Last year, it started making up for slipping sales in the United States by starting a complete-knockdown export program to Taiwan's Ford Lio Ho. It shipped 13,110 Festivas and 1,032 Concords (Mazda 626s) to Ford Lio Ho last year and hopes to raise Taiwan exports to 30,000 units this year.

Ford Motor Co. owns 10 percent of Kia, and Mazda Motor Corp. owns 8 percent.

Kia also has a truck program in the Philippines with Colombian Motor Corp., which this year will build 5,000 Ceres trucks from knockdown kits.

Kia still hopes to be selected for the Philippine government's people's car project. If successful, it would mean expanded exports of Festiva.

For 1990, Kia's export shipments are running at half last year's pace, mainly because of slipping sales of Festiva in the United States. Kia sent 10,223 Festivas to the United States in the first four months of this year compared to 22,751 in the same period last year.

Anticipating the need to diversify its markets, Kia started selling in Japan this year through Autorama outlets, a sales network jointly owned by Mazda and Ford. Kia shipped 1,462 units to Japan through April — a modest number but significant in that Kia beat Hyundai and Daewoo in exporting to Japan.

● **Daewoo Motor**, 50 percent owned by General Motors, has been hit hardest by the export slump. While chronic quality problems in the LeMans were being ironed out last year, GM suspended exports to the United States for several weeks.

Daewoo's exports dropped from 86,438 units in 1988 to 43,497 in 1989. As of the end of April this year, only 3,718 units had been shipped. Daewoo has tried to find new markets for its products, but because its products are made under GM license, it is restricted to markets GM approves.

Daewoo last year landed an order for 3,000 LeMans from a Czechoslovakian buyer in a cars-for-oil barter deal. It is finding new markets in New Zealand, Saudi Arabia and the Middle East, but volume so far is too low to be of any comfort or significance.

● **Hyundai Motor's** internal debate over whether to invest in a European plant has been drawn out by the export slump.

With 1992 and the integration of the European Community around the corner, Hyundai finds itself without a European manufacturing base — a distinct disadvantage in doing business in Europe.

In addition to falling U.S. sales, down 29.74 percent through May this year, Hyundai is grappling with declining European sales.

Europe held much promise for Hyundai, but its hopes were frustrated by a sizable sales drop this year in Britain: a mere 43 units in the first four months compared with 8,226 in the same period last year. Minor improvements were made in other markets, such as the Netherlands, where Hyundai shipped 1,356 units in January-February this year, nearly 50 percent more than last year. Hyundai also started selling in Switzerland for the first time, exporting 1,205 units during the two-month period.

Hyundai's sales in the United States are expected to perk up at midyear with the launch of the Scoupe, which will expand the company's product lineup to three series. Help also is expected from Hyundai's new captive finance firm.

Korean auto exports

By value . . .

Year	Value ($ millions)	Units
1984	$ 315.38	52,350
1985	741.92	123,110
1986	1,591.56	306,369
1987	3,135.18	546,310
1988	3,707.96	576,134
1989	2,717.08	356,040

. . . by Korean Big 3

Year	Hyundai	Kia	Daewoo
1984	50,376	1,072	650
1985	120,041	1,322	879
1986	302,134	1,476	859
1987	407,924	63,410	71,533
1988	407,719	78,340	86,438
1989	215,101	95,018	43,497

The good-luck models

Three models were the basis of the record-setting, but short-lived, rosy export streak: the Hyundai Excel (left), the Kia/Ford Festiva and the Daewoo/Pontiac LeMans.

WORLD BRIEFS

Taiwan firm to sell Nissan transplants

HONG KONG — Taiwan's Yue Loong Motor Co. and Nissan Trading Co. are establishing a company to sell vehicles in Taiwan made by Nissan plants outside Japan. First shipments will come from Nissan's Smyrna, Tenn., plant.

Capitalized at $1.8 million, the new company is called Capital Way Enterprise Ltd. Yue Loong owns 66.5 percent. Nissan Trading, a subsidiary of Nissan Motor Co. Ltd., owns 33.5 percent. Nissan Motor owns 25 percent of Yue Loong, and the two have a long-standing relationship. The Taiwanese company assembles Nissan vehicles for the local market.

With imports of vehicles from Japan banned in Taiwan, Yue Loong is following the example of other Japanese assemblers, who circumvent the ban by importing vehicles from Japanese-owned plants in third countries. The most successful example to date has been Honda's U.S. imports.

Capital Way has already taken delivery of four-door Sentras and pickup trucks from the United States. It intends to import vehicles from Nissan companies in Spain, Portugal and Britain. The first-year sales target is 700 vehicles.

Once the market leader in Taiwan, Yue Loong has slipped into second place behind Ford Lio Ho. It has suffered a setback with the launch of its Feeling range of cars, and it lacks the latest Nissan models to reinforce its lineup.

— Stephen Vines

Samsung, Nissan pair for special vehicles

SEOUL, South Korea — Samsung Heavy Industries will produce large trucks and special vehicles in a technical tie-up with Japan's Nissan Diesel starting next March.

Samsung plans to build an assembly plant with an annual capacity of 5,000 units at the Changwon industrial estate, South Kyongsang Province, at a cost of 72 billion won ($100 million). It will probably be adjacent to the Samsung facility at Changwon that makes fork lifts, cranes, excavators, bulldozers and other heavy construction equipment.

Korea's backlog for heavy duty commercial vehicles extends up to one year.

— Oles Gadacz

Alfa Romeo models delayed until 1994

TURIN, Italy — The new front-wheel-drive Alfa Romeo spider and coupe has been delayed until 1994. The delay means that the current spider, which is being exported to the United States, will have to be fitted with passenger-side air bags beginning in 1993.

The new spider and coupe are based on the 1992 successor to the Alfa Romeo 75 (Milano).

The cars — known as the 179 — are being designed and engineered by Pininfarina S.p.A.

Bodies probably will be built at Lancia's Chivasso plant and assembly will be carried out by Pininfarina

— Luca Ciferri

Honda's image ranks No. 1 in Japan in poll

TOKYO — Honda Motor Co. topped a list of 50 companies with the best corporate image in Japan.

The survey, conducted by *Nihon Keizai Shimbun*, included only three automakers in the top 50. Nissan Motor Co. placed sixth and Toyota Motor Corp. 19th.

The survey included not only the financial picture of the companies, but the "perception of goodness" among the public. Respondents were asked whether they would recommend the company to their sons or daughters. Companies were also rated on their originality, how they treated their employees, and how they met the needs of society.

Honda rated high in originality, "goodness" in dealing with employees, and the ability to project a clear corporate philosophy.

Nissan scored well in those areas, but rated slightly above Honda on originality — reflecting a recent upswing.

Toyota scored well on size and profitability, but less well on originality and adaptability. It was rated relatively weak on projecting a clear corporate philosophy.

The standings of the three tend to correspond with their ability to attract new applicants during the labor shortage of the past year.

Honda said it is not suffering from any shortage of applicants, and it is not taking any action to appeal to young applicants, other than a recent switch to a flexible time schedule.

Nissan noted that the move to make a new employee dormitory coed was one factor appealing to young workers.

Toyota suffers from a conservative image, plus the limitations of its primary location in central Japan.

Toyota plans to spend 100 billion yen ($666 million) over a four-year period to upgrade employee housing, recreation and restaurant service. It is planning an apartment complex in Tokyo where single workers can have private rooms for 12,000 yen ($80) a month.

KOREA'S EXPORT SLUMP

KOREA

FROM PAGE 26

For Daewoo Motor and Kia Motors, which build products under license from General Motors and Mazda Motor Corp., licenses dictate where their products may be exported.

This is less true in Hyundai's case. It has a more-advanced engineering capability than Kia and Daewoo and is able to re-engineer a significant percentage of its Mitsubishi Motors Corp.-based products. It has reduced its reliance on Mitsubishi to licensing of engine and drivetrain components.

While Hyundai and Kia have made modest starts in developing such exotic technologies as electronically adjustable suspension, anti-lock braking, traction control and variable valve timing, they are still many years and millions of dollars from applying the results to their production cars.

Korea's road to recovery will require a greater variety of car models and better quality and performance. Korea's streak of good luck with exports was built around three models: Hyundai Excel, Kia/Ford Festiva and Daewoo/Pontiac LeMans. "This industry has reached the limits of straight commodity-led export growth," says Sean Goldrick, representative director with Hoare Govett's Seoul office. "It needs technology."

R&d investment lags

Korea wants makers to boost spending

By Oles Gadacz
STAFF CORRESPONDENT

SEOUL, South Korea — One aspect of South Korea's engineering problem is reflected in the low rate of expenditure for research and development.

Korean automakers put an average of 3.5 percent of sales into r&d last year. The Ministry of Trade and Industry wants to see that raised to over 5 percent by the mid-1990s.

But r&d expenditures are significantly lower among Korea's parts and components makers. They averaged about 1.7 percent of sales last year, and that is keeping the brakes on the industry's development. "They're mostly mom-and-pop shops," comments a U.S. engineer who has been involved in engine programs in Korea for years.

In most cases, parts and components makers rely on the auto assembler for assistance with engineering, statistical quality control and product design and manufacturing process improvements.

Auto assemblers assign some of their own staff to the production, engineering and quality control departments at the parts and components makers. That system of cooperation breeds dependence and demands exclusivity. A parts maker that has been nursed along by one assembler is expected to remain loyal and to not do business with competitors.

Recognizing that problem, the Korean Automobile Manufacturers Association has taken up, as one of its first causes, a campaign to establish a national automotive parts research institute. Funding would be shared by government, automakers and the parts industry.

The institute would tackle parts and components research as well as basic research projects — an undertaking that automakers have shied away from because of the heavy risks and the long development time. It could also reduce wasteful duplicate research efforts.

Growing Korean market home to mega traffic jam

By Oles Gadacz
STAFF CORRESPONDENT

SEOUL, South Korea — While auto exports slid the slippery slope, the Korean market showed surprising growth.

Sales rose from 523,476 units in 1988 to 762,959 in 1989 and reached 301,962 in the first four months of this year.

But how long can the domestic market continue to carry the auto industry? At one car per 15 people, Korea's per-capita car ownership is still quite low. It is the statistic that Korean auto executives repeat to buttress their belief in a bright future for the industry.

But sitting in a Seoul traffic jam and choking on the exhaust fumes of one of the world's most densely populated cities, the idea of cramming more cars onto the already packed roads defies all logic.

"The lack of infrastructure is a bottleneck for domestic (car) sales growth," says Lee Dong-Wha of the Korean Automobile Manufacturers Association.

Lack of space is a big factor: Forty-three million people are crammed onto this peninsula about the size of Kentucky. Despite all government efforts to spread out the population, Seoul, with its better schools and jobs, is a magnet that continues to draw people from the outlying provinces. Seoul and the surrounding Kyonggi province are now home to nearly one-fourth the total population and half of the 2.8 million registered vehicles.

The government promises to alleviate traffic problems by improving public transportation. It has committed about $4.5 billion during the next 10 years to expanding subway service and building new city and intercity roads.

DITLOW

FROM PAGE 42

Contends William Noack, head of GM's Washington public affairs office: "The general public should understand this group for what it is: an activist organization with virtually no technical resources or automotive engineering expertise. We often wonder who they're really trying to serve, true safety interest or the interest of trial lawyers."

The charge is frequently leveled at the center. Ditlow claims the center gets only 8 percent of its income by selling information to attorneys. He regards the attorneys as necessary because they have subpoena power for records when they sue on behalf of victims.

As for criticism of the lack of engineers on the staff, Ditlow says he doesn't need technical help to spot a defect trend. By ferreting through complaints and files at the Department of Transportation, where a center staffer searches almost daily, Ditlow's troopers claim they can spot a problem.

Ditlow further argues that safety laws do not require the center, or any outside party, to tell the government why it suspects a part is defective or what is causing an automotive problem.

The center isn't always right, some NHTSA staffers point out. They accuse the center of overloading agency resources. According to NHTSA, of the 61 petitions for investigations the center has filed since 1975, only 16 uncovered new problems the agency had not already been probing. And only three of those led to recalls. During that same 15-year period, NHTSA opened 2,157 investigations.

But Ditlow says there's no shame in erring on the side of safety. "The agency is the ultimate decider. That's their job and we will keep sending those complaints," he says.

Nader dismisses recalls as a barometer of an advocacy group's clout. "I believe that every time a safety agency is established, there has to be a watchdog," he says.

GM's Noack isn't convinced. "If the center was truly pro-consumer, they would urge consumers to drive the safest cars, to use all the available safety equipment," he says. "I didn't see the center actively support the passage of seatbelt laws. They tend to stray far afield from safety issues."

But consumers look to the center for results, big or small. Charles J. Gorski, a retired chemical engineer in Cincinnati, says the center saved him from having to pay $400 to repair the transmission on his 1984 Chevrolet Citation because the 12-month warranty had just expired.

When the dealership insisted the problem wasn't theirs, Gorski called the center and followed its advice to contact a zone manager. GM ended up agreeing the transmission went bad prematurely and picked up $300 of the service tab.

"I thought that was a pretty good compromise," Gorski says.

Camry, Corsica, Mustang face analysis by NHTSA

By Diana T. Kuryiko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The federal government has upgraded its investigation into whether the motorized safety belts on 1987-90 Toyota Camrys are defective. The investigation is now an engineering analysis.

The National Highway Traffic Safety Administration said it has 121 complaints that allege the belts do not hold properly and would not provide proper restraint in an accident.

NHTSA said 778,118 cars could be affected.

The agency also upgraded to engineering analysis its investigation into hoods that fly open on 1987-88 Chevrolet Corsicas and Berettas. NHTSA suspects both hood latches malfunction.

The agency said it has received 62 owner complaints, alleging 35 accidents, one injury and one fatality. A total of 289,000 cars could be affected.

In addition, NHTSA reopened its investigation into fractured floor pans on 1979-84 Ford Mustangs. It is in the engineering analysis stage.

An earlier two-year probe was closed in April 1987 when NHTSA could not find a defect. Since then, the agency has received 170 new complaints; three allege accidents in which seven people were injured.

About 1.23 million cars could be affected.

NHTSA has also opened three preliminary investigations to determine whether to pursue a formal defect probe that could lead to a recall:

- Renault/Eagle Medallions, 1988-89, for throttle linkage failures ranging from sticking cables and broken cables to broken mounting brackets. NHTSA has received 12 complaints alleging three accidents; 30,700 cars could be affected.
- Ford Festiva, 1988-89, for seats that come loose and break away from the floor; three complaints and three reports of injuries; 130,000 cars.
- Geo Metro, 1989-90, for a rear suspension failure that causes a temporary loss of control; one complaint; 142,000 cars.

GM to build trucks that run on natural gas

HOUSTON — General Motors will build 1,000 light trucks powered by natural gas in an agreement with a consortium of energy companies that will buy and help pay for the vehicles, the *Houston Chronicle* reported.

The newspaper said GM will announce the plan at this month's Economic Summit here, becoming the first of the Big 3 to mass-produce vehicles powered by natural gas.

GM spokeswoman Sharon Hines declined to confirm the plan. "The Truck and Bus Group is looking at compressed natural gas as an alternative, but it's really too early for us to comment," she said.

The half-ton trucks will be built in 1991 at a GM plant and converted to natural gas by PAS Inc., a Detroit-area supplier, the newspaper said.

David Polletta, general manager of PAS Inc., said the vehicles will be sold under the GM name and guaranteed by a GM warranty.

"This is a way to speed up GM's research," said Vicki Cho, a spokeswoman for Southern California Gas Co. of Los Angeles, the nation's largest gas distribution company and a member of the consortium.

The *Chronicle* said the consortium has agreed to provide as much as $1 million in funding for the final research and testing of the vehicles.

The consortium — also expected to purchase many of the GM trucks — is composed of companies in Texas, California and Colorado.

Besides Southern California Gas, it includes Entex and Enron Corp. of Houston, Southern Union Gas Co. and Lone Star Gas Co. of Dallas, Pacific Gas and Electric of San Francisco and San Diego Gas and Electric.

Officials said an announcement of the project has been delayed because GM is considering expanding the venture beyond light trucks.

— The Associated Press

WAGES

FROM PAGE 2

For example, Honda pays the sixth highest hourly wage rate to its production workers. But workers could have earned $33,685 without overtime, the fifth best annual straight-time pay among the 10 companies surveyed.

Nissan pays only the sixth best hourly rate to its skilled trades (maintenance) workers, but those workers could have earned $37,797 straight-time, the fifth best annual total.

All three unionized transplants are affiliated with the Big 3 automakers: NUMMI; Diamond-Star Motors Corp. (Chrysler and Mitsubishi); and Mazda Motor Manufacturing (USA) Corp., which makes Probes for Ford, its part-owner.

The transplants produced 16.6 percent of all domestically produced vehicles last year and are growing. Big 3 automakers say that to compete with them, they must reduce overhead labor costs — a signal that they will not offer appreciable wage and benefit increases when contracts expire Sept. 14.

"I don't see how the UAW can get back to the annual 3 percent wage increases," said Harry Katz, a labor economist at Cornell University. He said massive layoffs and plants closings in the 1980s "remind the auto workers that they don't have much muscle."

Still, when bargaining begins July 18, the union will seek improved earnings for its members.

estoration of the 3 percent annual wage increase "is a top priority in this round of bargaining," according to a primary resolution included in a book that was distributed to 350 union leaders representing GM hourly workers at a meeting in Detroit last week.

In the current three-year pact, GM and Ford workers got a 3 percent wage increase the first year and 3 percent bonuses in years two and three, plus COLA.

Chrysler's two-year pact paid its workers 3 percent bonuses each year.

Workers prefer wage increases because bonuses are not folded into the base pay for subsequent years.

Explaining his company's plea to hold the line on wage or benefit increases, Chrysler spokesman Lee Sechler said: "The things the transplants don't have to worry about is a big group of retirees right now."

Chrysler's pension plan paid $573 million to retirees last year; GM's paid out $1.6 billion; and Ford's paid out $975 million.

Both transplants and the Big 3 have to set aside money for future retirees.

The transplants inherently raise other issues besides just pay.

The UAW booklet proclaimed the union's desire to gain Japanese-style perks:

"There is no good reason why some workers punch time clocks and others don't; why some management have separate and better eating facilities; why some managers have reserved and/or better parking spaces while our people have to fend for themselves; why managers get huge bonuses while we don't."

At the transplants, all workers eat in the same dining area. (Some Big 3 plants have single dining areas, too.)

And full-time transplant workers enjoy company pledges of no layoffs, meaning they will not lose their jobs unless the financial health of the company is jeopardized.

"Our contract is certainly comparable to the Big 3," says NUMMI spokesman Michael Damer. "We may be the highest paid." He said that NUMMI has laid off no workers since the clause was enacted in 1985.

Transplants offer other perks.

Nissan offers its workers a free, on-site recreation facility that includes lighted tennis courts, a golf driving range and two swimming pools.

Honda has a similar on-site athletic facility, which costs workers $12 a year.

All transplants but Mazda have voluntary employee savings plans in which the companies will match up to half an employees' savings, up to a certain percentage of earnings.

The Big 3 have no such programs.

Nissan, Subaru-Isuzu Automotive Inc. and Diamond-Star are the only three manufacturers without an attendance award.

"We do not pay our people to come to work," said Nissan spokesman Bucky Kahl. "We think that's the obligation of the employee."

He said Nissan more than makes up for no attendance bonus with a $1.55 guaranteed hourly bonus plus the success sharing program, based on quality of the vehicles and the company's overall financial performance.

Toyota Motor Manufacturing USA Inc. in Georgetown, Ky., believes it must pay comparable wages and benefits if it is to keep the UAW at bay.

Sam Heltman, vice president of human relations for Toyota, says his company paid wage rates about 15 percent below the industry average in 1986 but is now within 3 percent of the industry average.

"And we have a commitment to close that gap by October of this year," he says.

Nissan considers Spain for new assembly plant

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Nissan Motor Co., the only Japanese maker currently building cars in Europe, is considering adding a car plant in Spain.

Nissan Motor Iberica SA, the Spanish commercial vehicle maker controlled by the Japanese company, is conducting a feasibility study on a new facility that would supplement Nissan's four-year-old assembly plant in Britain.

Motor Iberica's corporate planning manager, I. Wakatsuki, said the study was launched at the invitation of Spanish Industry Minister Claudio Aranzadi.

Wakatsuki said the company is reviewing various sites in Spain. But he added that "nothing has been decided" and that no timetable is set for completing the study. A new plant south of Barcelona is one possibility.

Nissan would produce 1.6- and 2.0-liter cars in Spain. Total investment is pegged at about 250 billion pesetas ($2.4 billion), though the potential annual production rate was not spelled out.

Motor Iberica currently produces the 4wd Patrol, Vanette light van, Trade vans, and Ebro trucks and buses at its Zona Franca plant in Barcelona. Production last year totalled 90,602 vehicles.

Nissan acquired an equity stake in the Spanish company Motor Iberica in 1980 and has held majority control since 1982.

The Japanese company already has plans to produce a new 4wd sport-utility in Spain with Ford Motor Co. An agreement signed last year anticipates production of 50,000 units beginning in 1993.

Nissan, the Japanese market leader in Europe with sales of nearly 400,000 units last year, expects to produce 77,000 sedans in 1990 at its plant in Sunderland, England. The British-built Bluebird will be replaced this fall by the Primera. Output at Sunderland will rise to 200,000 by 1992, when the Micra is added.

Czech truckmaker seeks partner

PRAGUE, Czechoslovakia — Tatra, the Czechoslovakian producer of trucks and limousines, is looking for a Western partner.

Truck joint-venture talks are said to be under way with MAN AG, Iveco BV and Volvo Truck Corp. Sources here say Volvo has the inside track.

The Czech government hopes for a decision within a few months.

Tatra is one of Eastern Europe's largest truck producers and has a sizable export operation. It also has a large dealer network in Eastern Europe, an asset that would be attractive to a Western truckmaker.

With increasing trade between East and West, all Western truckmakers are looking for improved sales and service networks in the East. Any deal with Tatra is likely to include sales and service for the Western maker's customers.

MEDICAL AND PENSION BENEFITS COMPARED

Company	Medical Highlights	Pension Highlights
Ford	No payroll deductions; some co-pay	Full benefits after 30 years; $1,500/month, less Social Security benefits
GM	No payroll deductions; some co-pay	Full benefits after 30 years; $1,500/month, less Social Security benefits
Chrysler	No payroll deductions; some co-pay	Full benefits after 30 years; $1,500/month, less Social Security benefits
Honda	No payroll deductions; no deductibles; no vision; some co-pay	2.5% of base earnings invested annually
Subaru-Isuzu	No payroll deductions; some deductibles; some co-pay	Minimum of 5% of base pay invested annually
NUMMI	No payroll deductions; no co-pay	Full benefits after 40 years; $1,250/month
Diamond-Star	Comprehensive plan including vision begins 9/1/91; some co-pay; some deductible	Maximum benefit after 35 years; 49% of average earnigns, less Social Security benefits.
Nissan	12.5% of cost paid by deduction; no deductibles	Maximum benefit: 50% of average annual earnings, less Social Security benefits
Mazda	No payroll deductions; some co-pay	Full benefits after 30 years; $1,500/month less Social Security benefits
Toyota	No payroll deductions; some deductibles; some co-pay; no vision	4% of wages invested annually

PRODUCTION

Blockade fails to cut week's build

By Karen Detkowski
AUTOMOTIVE NEWS STATISTICIAN

For the second time in five weeks, independent Canadian truckers last Thursday blockaded entrances to the bridge and tunnel connecting Detroit and Windsor, Ontario. Automakers in the two countries reported no production cutbacks last week because of the blockade.

U.S. automakers scheduled production of 143,912 cars last week, 3.54 percent below the prior week but 16.02 percent above the year-ago week when plants had already begun changeover downtime.

So far this year, 3,191,347 cars have been produced, 16.83 percent below 1989.

Domestic truck producers slated 82,685 units last week, 12.19 percent below the previous week but 3.17 percent ahead of last year. The 1990 truck production total is 2,090,244, 9.07 percent below 1989.

Companies split last week's targeted output as follows: General Motors, 46.21 percent; Ford Motor Co., 24.30 percent; Chrysler Corp., 11.74 percent; Honda of America Manufacturing Inc., 6.11 percent; Toyota Motor Manufacturing U.S.A. Inc., 3.06 percent; New United Motor Manufacturing Inc., 2.85 percent; Mazda Motor Manufacturing Corp. USA, 2.28 percent; Diamond-Star Motors Corp., 2.01 percent; Nissan Motor Manufacturing Corp. U.S.A., 1.09 percent; and Subaru-Isuzu Automotive Inc., 0.35 percent.

Last week, GM scheduled Friday overtime at the Janesville, Wis., Cavalier plant and Saturday overtime at the Janesville truck plant.

Chrysler's Dodge City truck plant in Warren, Mich., is closed for model changeover and will resume operations July 16.

All Ford plants closed today for a two-week vacation. Production will resume July 16.

Diamond-Star Motors in Normal, Ill., closed today for a one-week model changeover.

Honda's assembly plants are closed this week for vacation. Operations will resume July 9.

All U.S. plants will be closed Wednesday in observance of Independence Day.

Cars and trucks slip in Canada

Canadian auto producers scheduled 24,842 units last week, 4.32 percent below the prior week, but 45.74 percent above the 1989 week.

So far this year 543,233 cars have been produced, 4.33 percent more than the year-earlier period.

Last week's estimated truck production of 19,026 fell 5.24 percent below the previous week and 1.94 percent below the year-ago week.

Year-to-date, 475,590 trucks have been assembled, 8.78 percent below last year's total.

Canadian assembly plants are closed today in observance of Canada Day.

Chrysler began model changeover today at its Windsor, Ontario, minivan plant.

The plant will assemble restyled mini-vans when it reopens July 30.

All Ford plants closed today for a two week vacation.

4% price hike seen for 1991; summer games mask impact

By Michelle Krebs
and John K. Teahen Jr.
AUTOMOTIVE NEWS STAFF REPORTERS

DETROIT — General Motors is expected to report a price increase of nearly 4 percent when it introduces its 1991 cars. If Ford Motor Co. and Chrysler Corp. fall in line, the domestic industry's hike will be higher than in recent years.

And the hike would be even greater had it not been for some fancy summertime footwork by each of the Big 3.

Domestic automakers have raised prices on 1990 vehicles to soften the blow of hefty price hikes expected on 1991 models. They have even raised prices on some 1991 models already on sale.

The price increases also ensure, if there were any doubt, that incentives will stick around. The Big 3 apparently are building incentives into their sticker prices these days.

Industry executives acknowledge that 1991 model prices will probably increase by a higher percentage than in recent model years, except for the big bump for passive restraints on 1990 models.

Higher materials costs, continued expense associated with installing passive restraint systems mandated by the government and additional standard equipment have pushed prices higher.

But by instituting small price increases on 1990 models in the waning days of the 1990 model year — less than three months before the new season begins — the automakers will be able to make the price hikes on 1991 models look less severe.

Some dealer sources predict that price increases on 1991 models will be just under 4 percent, which is below the 4.8 percent rate of inflation. A 4 percent price increase would amount to about $650 for General Motors and about $600 for Ford Motor Co. and Chrysler Corp.

General Motors, which made no public announcement of its latest increase, raised prices an average of $83, or 0.5 percent, on cars and light trucks, effective July 2. Car hikes ranged from $65 on intermediate models like Chevrolet Lumina and Oldsmobile Cutlass Supreme to $165 on Cadillac DeVille. GM also increased destination charges by $10 a vehicle on most models, following a $20 increase in the spring.

Chrysler Corp.'s increases range from $60 on Dodge Daytona and most Chrysler LeBarons to $160 on Chrysler Fifth Avenue and Imperial. Plymouth Voyager and Dodge Caravan minivan prices rose $118. Chrysler did not give an average. Destination charges went up $30 on Chrysler Fifth Avenue and Imperial and $15 on most other lines.

Two weeks earlier, Ford Motor Co. raised prices of most of its cars and trucks. The car increase averaged $49, or 0.3 percent, and the range was $58 to $123. Ford didn't reveal the average increase of its trucks.

CONDITION REPORT: GUARDED

First-half totals down 8% despite late June spike

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Sales of domestically produced vehicles, buoyed by a strong General Motors performance, rose in the last 10 days of June, but not enough to push sluggish first-half totals ahead of last year.

Industry car and truck sales for the first six months of 1990 totaled 7,263,702 units, down 8.39 percent from the first half of 1989.

Sales of U.S.-built cars for the last 10 days of June were up 11.88 percent; U.S.-made truck sales were up 12.69 percent.

Yet, sales of U.S.-produced cars and trucks for the first six months of 1990 remained off 3.63 percent from the year-ago levels.

The end-of-June sales spike surprised analysts, but they don't expect it to last.

"Although sales in June may have ratcheted up a notch after a poor spring selling season, we don't foresee any further signifi-

1990 Honda Accords line the lot at Mitchell Honda/Buick, Mt. Clemens, Mich. For the first half of 1990, Accord sold 203,281 copies, nearly 37,000 more than last year at the same time.

Analysts' prognosis: Sluggish sales

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

The Bush Administration's nod to new taxes could mean tough sledding for the auto industry for the rest of the year and into 1991 if marginal car buyers sit tight.

"The consumer confidence index has been flat, but more recently it is down," said Jean-Claude Gruet, analyst with New York-based UBS Phillips & Drew. "There is concern about the economy over the next few quarters. The marginal consumer is waiting, playing it safe and saving."

Auto analysts forecast sluggish car sales over the next six months with interest rates dipping slightly and consumers edgy over the prospects of tax hikes.

For the most part, analysts are sticking fairly close to sales predictions they made earlier in the year.

The spread between 10 analysts surveyed by *Automotive News* is a low of 14.1 million units to a high of 14.6 million cars and trucks.

The consensus among analysts is that Toyota and Honda will finish the year clear victors in the bout for more market share. Subaru and Hyundai are pegged as losers.

"Toyota is the big winner with its Lexus division," Gruet said.

But he said West German imports including Volkswagen, Audi and Mercedes have performed surprisingly better than expected.

"The luxury car market was the best performing segment in 1989 and again this year," Gruet said. "The West German manufacturers as a group are up 2 percent."

Among domestics, analysts contend GM will have the biggest gains, led by its Chevrolet division.

Ford Motor Co. is expected to end the year down slightly with Chrysler the big loser.

Ford testing dealer-only incentives

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. is test marketing dealer-only rebates on selected Mercury car lines in New York, New Jersey and the six New England states.

The results of the program may determine if across-the-board dealer rebates have a future with Ford, which has used them selectively in recent years.

The program began June 23 and expires July 31.

Ford spokesman Bill Carroll said Lincoln-Mercury Division is giving dealers $300 to $1,500 on 1989 and 1990 Cougar, Topaz and Sable models, based on performance against quota.

No across-the-board customer rebates are offered on those cars in New York, New Jersey or New England from June 23 to July 31. Those buying on Ford's A, X and Z plans (employees, retirees and suppliers) are eligible for a $1,000 rebate on those cars in those states.

"We're testing to see what works," Carroll said.

Neither Ford nor L-M has ever used dealer rebates on their products on a across-the-board basis, Carroll said.

Dealers say they like the program, but it is too early to tell how the program is working.

"Giving the rebate to the dealer helps the consumer get a better trade-in, but it's six of one, half a dozen of another," said a large New England L-M dealer.

Currently, all three domestic manufacturers and eight importers are using dealer incentives. The imports are Audi, Hyundai, Isuzu, Nissan, Saab, Subaru, Suzuki and Toyota.

Oldsmobile went to dealer-only incentives in late 1989 but has slowly backed down and now offers consumer rebates on some models.

Mitsubishi seeks own spotlight

By Cleveland Horton
CRAIN NEWS SERVICE

Chrysler Corp. Chairman Lee Iacocca earlier this year gave Mitsubishi Motor Sales of America a public, unsolicited endorsement.

In the first commercial of the "Advantage: Chrysler" corporate campaign, Iacocca says: "Two cars come off the same assembly line, in the same American plant. A Japanese nameplate goes on one, an American nameplate goes on the other, and people prefer the Japanese version."

Most people familiar with the automobile industry assumed Iacocca was referring to the cars from Diamond-Star Motors Corp. in Illinois, a joint venture between Chrysler and Mitsubishi Motors Corp., the U.S. Mitsubishi company's parent. Cars assembled at the plant become either Mitsubishi Eclipses, Plymouth Lasers or Eagle Talons, and the Eclipse has consistently outsold its Chrysler cousins.

Iacocca's commercial points up the loosening ties between Chrysler and Mitsubishi, and the latter's growing marketing prowess.

The No. 3 domestic automaker has been importing Mitsubishis and selling them as Dodges and Plymouths since the early 1970s, and as Eagles since Chrysler bought American Motors Corp. in 1987, but Mitsubishi established its own U.S. marketing arm in late 1981 and has slowly been building up its franchise.

Although small by auto industry standards, Mitsubishi is gearing up to dislodge Mazda, the No. 4 importer behind the Japanese Big 3: Toyota, Honda and Nissan.

With 1989 U.S. vehicle sales of 150,476, Mitsubishi still has a long way to go to match Mazda Motor of America, which recorded sales of 341,917 for the same period.

But Christopher Cedergren, director of competitive assessment at J.D. Power & Associates, believes Mitsubishi is putting a dealer organization in place and

CHARLES KRASNER

"Many (dealers) want to keep their first one for themselves," says Rick Case of Rick Case Acura in Fort Lauderdale, Fla., of the NSX sports car.

NSX: *Dealers bet near-exotic Acura will fetch premium prices*

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Some Acura and exotic-car dealers are willing to pay $10,000 or more above list price for the upcoming 270-horsepower NSX sports car.

The 3.0-liter V-6 will go on sale next month for $55,000 to $60,000, Acura has said.

Anticipation of the new Acura flagship has led some dealers to bet demand will push prices up higher once the car debuts.

Rick Case of Rick Case Acura in Fort Lauderdale, Fla., has advertised that he will pay $10,000 above sticker — to no avail: "No dealer wants to part with the car because they don't know how many they're going to get."

Case says he's taken orders, and $5,000 deposits, from 12 customers. He says Acura hasn't told dealers what kind of allocation to expect, except that each of the 300 dealers will get at least one. About half of the first-year production of 5,000 is earmarked for the U.S. market.

Physician Freeman Clark of Memphis, Tenn., is on a waiting list to get an NSX in August or September. He's been advertising his promised car at $33,000 over sticker for two weeks and received 15 to 20 calls.

Acura spokesman Mike Spencer views the speculation as a Catch-22: "It's exciting that people are willing to spend thousands over sticker for the car just based on what they've read and its reputation, but it can turn around and bite you if dealers gouge customers and incur ill will down the road."

Some dealers are taking a more cautious approach. Scott Young, a partner at Crossroads Acura in North Hollywood, Calif., says: "I don't know how many I'm going to get, how much they're going to cost, so I don't think it's right to take anyone's money until those questions can be answered."

Ford reorganizes heavy truck staff

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Ford Heavy Truck Operations has undertaken a reorganization of its marketing and product planning staff.

Among several executive appointments, James D. Whyte, former plant manager of Ford's Louisville, Ky., truck plant, replaced William Clay Ford Jr. as heavy truck engineering and manufacturing manager.

Ford, 32, was named director of business strategy for the Ford Automotive Group in March.

Kenneth F. Smith, general operations manager, heavy truck, Truck Operations, said the changes, effective July 1, were aimed at sharpening Ford Truck Operations' focus on customers and future product programs.

Smith said Ford has not allocated additional money to expand its staff, but structurally reorganized to take better advantage of the people it has.

About a year and a half ago, Ford Truck Operations put its engineering and assembly operations under one management to strengthen their relationship.

Now, Ford wants to have more contact with customers, including both dealers and fleet accounts, and to increase customer input into major new programs Ford is developing, Smith said.

Therefore, the company has expanded key marketing department operations for heavy trucks.

Europeans wrestle with overcapacity

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Alarms about critical overcapacity in the European auto industry are sounding at the same time that six large producers are scrambling to build more cars.

The contradiction in the world's largest new-car market reflects automakers' struggles to meet demand without giving up a valuable political argument that could be used to limit Japanese growth for several years.

The capacity issue is sensitive, and, according to industry analysts, almost unquantifiable. But Ford Motor Co. Chairman Harold Poling said recently that the European industry currently has about 2.2 million units of excess capacity — without counting the expected wave of Japanese transplants and new production in Eastern Europe.

Some industry observers believe political maneuvering at the European Commission headquarters in Brussels, Belgium, over how to contain the Japanese share in a borderless Europe is obscuring the capacity situation in a market that has grown steadily since the mid-1980s.

New-car sales in 17 Western European countries topped 13.4 million units last year and are still holding up. Japan, limited in several countries, has about 11 percent of the market.

The capacity issue is frustrating the Japanese, who now face the prospect of having transplant volume counted toward a European import ceiling that could be in place into the next century.

"It's pure bull," says Moriharu

Survey says Acura customers are happiest

Industrywide Customer Satisfaction Index rises in Power survey; VW leaps 12 spots

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — For the fourth straight year, Acura customers are the most satisfied in the nation.

But U.S. customers are happier with their vehicles and their dealers than they were a year ago, according to J.D. Power and Asociates' latest Customer Satisfaction Index. Each of 18 nameplates listed by the market research firm improved on last year's scores and the industry average increased.

J.D. Power publicizes only nameplates that score above the industry average. Mitsubishi, Volkswagen and Lincoln climbed onto the list, and Hyundai fell off.

Second-place Mercedes-Benz and third-place finisher Toyota both had 10-point increases on the index and closed the gap on Acura. Toyota bumped Honda out of third, and Cadillac crept into the fourth spot. Even though Honda improved its 1989 score by three points, it dropped from third place to fifth.

Nissan improved its score but remained in sixth place, another indication of improved customer satisfaction industrywide. Buick went from 10th to seventh, where it shares a spot with Subaru. Porsche jumped 11 points to ninth place after sitting in 15th last year. BMW and Mazda stuck together again, although this time the two shared 10th place, not eighth.

Volkswagen and Mitsubishi finished in 14th place along with Plymouth and Mercury. VW's 17-point gain was the biggest in the industry and moved it 12 positions from 26th place last year. Mitsubishi motored up from 21st.

J.D. Power sends out 100,000 questionnaires to new owners of cars and trucks after about 12 months of ownership. About 35 percent of those responded.

The 1990 customer satisfaction index reports on 1989 model-year products. Power's initial quality survey, on the other hand, deals with the first 60 to 90 days of ownership and focuses on current model-year cars and trucks.

David Whiteside, publisher and editorial director of *The Power Report*, said the firm announced this year's index about a month earlier than usual to prevent leaks to the press.

"In light of the apparent sieve there is for this information, we've decided it's time to take command of our information and get it out to the press almost simultaneously with presenting it to our clients," he said.

Quality rises 6% in Power survey; Cressida rated tops

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — The Asians have again easily won the U.S. quality crown, but domestic and European automakers are making the biggest improvements.

That's the essence of the latest initial quality survey from J.D. Power and Associates, an Agoura Hills, Calif., research firm.

Buick ads tout ranking, Page 28

The industry as a whole showed a 6 percent improvement in the number of reported problems in the first 60 to 90 days of 1990 car ownership. The average fell to 142 problems per 100 cars from 151 in 1989.

Among individual models, Toyota's Cressida claimed the title as the most trouble-free. Mazda scored with the most trouble-free truck (the pickup) and was the leading truck nameplate.

The Asian import nameplates, long the standard-bearers in producing top-quality vehicles, posted 121 problems per 100 cars for the second straight year. Problems among domestic brands fell 6 percent from 162 to 153 per 100 cars, and European nameplates dropped from 203 to 181, an 11 percent improvement.

"The domestics and Europeans had a lot more room to make up," said George Peterson, president of AutoPacific Group, a Newport Beach, Calif., auto research firm. "There's just no Japanese schlock out there, and there are still some pretty rough American cars being sold."

Indeed, the Japanese placed seven of the top 10 car nameplates. Lexus and Infiniti, the two widely touted luxury nameplates, lived up to their promise by placing first and fourth, respectively. Lexus trumpeted its crown in a two-page *Wall Street Journal* last week that mused, "And to think a year ago we weren't on anyone's list."

Lexus, Mercedes-Benz, Toyota and Infiniti were the first nameplates ever to log fewer than 100 problems per 100 cars.

General Motors' Buick Division was the highest-ranking domestic brand. Buick jumped into 5th place, with 113 problems per 100, and moved ahead of Honda, Nissan and Acura. The Buick LeSabre was the sixth most trouble-free model. It actually fell four places in the standings despite having seven fewer defects in the 1990 score, demonstrating that top quality is a moving target.

Power does not release nameplates that fall below the industry average. But a copy of the full report published in *The Detroit News* and *Free Press* last month listed the Chevrolet Camaro as the single most problem-prone car and Hyundai as the nameplate with the most problems.

While car quality appears to have risen, the compact truck segment seems to be moving in reverse. The 1990 results show a fleet of new trucks with 181 problems per 100, 12 more than last year. Even No. 1 Mazda had a marked increase in reported problems. Last year, Mazda led the pack with 83 problems per 100 trucks; this year, there were 115.

In the Power survey, the Japanese placed seven of the top 10 car nameplates.

Toyota, No. 2, had an even steeper increase, from 93 last year to 130.

Faring better were compact sport-utilities, which as a group bettered their initial quality survey rating by 23 points, from 217 problems per 100 in 1989 to 194. Domestic makes were entirely responsible for that improvement, while import sport-utilities had an increase in reported problems.

In the compact van segment, the result was just the reverse. Imports bettered their record by 17, falling from 148 problems per 100 to 131. The domestics on the other hand, had 45 more problems per vehicle this year than last, up from 177 to 222.

J.D. Power said that small sample sizes kept such nameplates as Saab, Porsche, Sterling, Yugo, Peugeot, Isuzu, Suzuki, Daihatsu and Alfa Romeo off the 1990 list.

J.D. Power's list of the second 10 most trouble-free models contained eight Japanese and three U.S. autos. The cars and their problems per 100 defects were: Toyota Supra (100), Lexus ES250 (101), Buick Century (101), Pontiac 6000 (102), Mitsubishi Galant (104), Acura Legend (105), Nissan Stanza (108), Infiniti M30 (109), Honda CRX (109), Honda Accord (114), Ford Crown Victoria (114).

Class action seeks cash, removal of Jeep CJs from road

By Helen Kahn
SENIOR CORRESPONDENT

WASHINGTON — A national class action seeking to take all Jeep CJ vehicles off the road because of alleged "life-threatening" design defects has been filed in a state court in Maryland.

The suit seeks full refunds for some 350,000 current CJ owners, plus punitive damages from defendants Chrysler Corp., Chrysler Motors Corp., American Motors Corp., Renault, Jeep Eagle Corp., and Jeep Eagle Sales Corp.

The suit is brought by Trial Lawyers for Public Justice, a public interest firm loosely affiliated with Ralph Nader which uses more than 700 top plaintiffs' trial lawyers to bring precedent-setting litigation.

Associated law firms are Kohn, Savett, Klein & Graf of Philadelphia; and Levan, Schimel, Richman, Belmon, Abramson and Scanlan of Columbia, Md.

Trial Lawyers claims Chrysler and AMC/Jeep have known for more than 10 years that the CJ-5 and CJ-7 have design defects and have participated in a conspiracy to conceal the truth from consumers. Trial Lawyers executive director Arthur H. Bryant says the defendants "valued profits over lives and ought to be held accountable."

Production of Jeep CJs stopped in 1986, and Chrysler and AMC have denied any defect. But the National Highway Traffic Safety Administration, which continues to track problems, counts more than 150 fatalities each year from rollovers involving CJs.

Two weeks ago groups including Public Citizen, Center for Auto Safety, and the Institute for Injury Reduction asked NHTSA to recall all CJ Jeeps.

The suit notes that last January, Public Citizen accused Chrysler and AMC/Jeep of a coverup and that on June 1, ABC's *20/20* program revealed internal memos and alleged company knowledge of a dangerously high center of gravity, a failure-prone shackle pin and an inadequate roll bar.

The Trial Lawyers suit charges breach of warranty, violation of the consumer protection laws, fraud, conspiracy, concert of action, misrepresentation and nondisclosure and negligent failure to recall.

Ford kills Geo fighter based on new Escort

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co.'s product planning ax fell again last week as the company officially killed a 2+2 derivative of the new Escort/Tracer.

The car, which was scheduled to arrive in Ford showrooms in the 1992 model year, was designed to compete with the Geo Storm. Engineers would have shortened the Escort/Tracer wheelbase. Planners felt the sporty, 2+2 market could be covered with the company's present lineup of Capris and Escort GTs.

Vehicle cost and weight, which have killed previous product programs, were not a factor in canceling the CT20-S, according to those close to the project.

"It just didn't make cycle planning sense," said a source close to the project.

Supplier sources said planning volume for the car could have reached 40,000 to 50,000 annually.

The CT20-S joins the 1991 all-wheel-drive Thunderbird, PN38 flexible truck platform and the Jaguar F-type and AC Ace sports cars in Ford's future-product graveyard.

Exports take bite out of auto trade deficit

WASHINGTON — The U.S. automotive trade deficit in passenger cars and light trucks continued to show improvement in March, falling 1.6 percent.

"The auto industry did more than its part to improve the U.S. trade balance in March, as it has for the last year," said John Hammond, a managing partner of J.D. Power & Associates, a market research firm in Agoura Hills, Calif.

During the last 12 months, the deficit has fallen 8.1 percent, to $40.97 billion. The March improvement came on the strength of a 15.4 percent jump in the value of exports, according to the latest figures released by the U.S. Commerce Department.

But Hammond noted that despite the improvement, auto imports outstripped exports by about four to one and that U.S. automakers have "a long way to go to be in balance."

The number of vehicles exported in March increased 9.9 percent compared to the same period one year ago, rising to 112,057 units. The number of imported vehicles fell 3.9 percent for the month to 442,903 units.

The value of U.S. vehicle exports to Japan was up 81.6 percent. Vehicle shipments to the countries classified as "others" by the Commerce Department — most of them European — were up 50.2 percent in value.

On the import side, the value of Japanese shipments fell 4.4 percent. Shipments from South Korea were down 69.7 percent.

The value of imports also declined from Mexico (37.4 percent), the United Kingdom (22.0 percent), France (98.1 percent) and Brazil (55.9 percent). Yugoslavia shipped no vehicles to the United States.

The United States exported 922,918 vehicles in the 12-month period ending in March 1990. Nearly three in four were sent to Canada.

Mercedes adds entry-level 190 to 1991 lineup

Base price of 190E 2.3 sports sedan is $28,050.

MERCEDES-BENZ FOR 1991

Model	Wheelbase (inches)	Length (inches)	Width (inches)	Height (inches)	Curb Weight (pounds)	Base engine	Drive type	Body styles
190E 2.3	104.9	175.1	66.1	56.6	2,987	2.3-liter I-4	rwd	4-dr.

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — The 190E 2.3 sports sedan is the first 1991 Mercedes-Benz model for the United States.

The sedan, which went on sale in June, is essentially the same as the 190E 2.3 that was dropped from the U.S. lineup in October 1988.

INTRO 1991

At $28,050, it is the only car in Mercedes' U.S. lineup that is priced below $30,000. And its overhead-cam, 2.3-liter engine is the only four-cylinder in Mercedes' U.S. product range.

Standard equipment includes a driver's side air bag, anti-lock brakes and four-wheel disc brakes.

The engine produces 130 horsepower at 5,100 rpm and 146 pounds-feet of torque at 3,500 rpm. Top speed on the test track is 122 mph for the manual and 119 mph for the $28,950 automatic. Zero-to-60 mph is achieved in 11.0 seconds for the manual and 10.8 seconds for the automatic. Mileage ratings are 20 mpg city/28 mph highway for the manual and 20 mpg city/26 mpg highway for the automatic.

The exterior has been changed since 1988 by the addition of lower-body side moldings, deeper front air dam and rear valence, restyled bumpers and new front and rear suspension settings that reduce the car's overall height.

Interior changes include an improved air conditioning system, redesigned seats, increased rear-seat knee room and height-adjustable front shoulder belts.

Canadian sales skid continues

Car-truck total down 15% in May, 10% through five months

By Bill Vance
SPECIAL CORRESPONDENT

TORONTO — Canadian new-car and truck sales continued their decline in May.

Total sales of cars and trucks, imported and North American-built, fell 15.3 percent to 144,998. Sales through the first five months of the year were down 10.0 percent from a year ago.

Each of the Big 3 suffered with their North American-built cars. Ford of Canada was down 25.44 percent; General Motors slipped 20.76 percent; and Chrysler Canada dropped 19.65 percent.

Import car sales fell 3.0 percent. One notable exception was Volkswagen, which racked up a solid 56.6 percent monthly gain and a 31.5 percent advance for the first five months of the year.

Overall domestic and imported car sales were down 14.01 percent.

As in the past, Canada's high interest rates — the prime rate is 14.75 percent — were identified as the chief culprit in the sagging sales. "With continued high interest rates, we anticipated further softening of the automobile market," said Bill Atkinson, GM's vice president of marketing.

Total truck sales were down 18.0 percent. That broke down to a 21.5 percent slide on the North American-built side and a 6.5 percent gain for the imports. With 31,123 sales through May, imported trucks were 10.81 percent ahead of last year's total.

Diamond-Star begins Mirage/Summit output

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

The Eagle model is selling at a slower pace than last year, while the Mitsubishi version has increased sharply.

After an eight-month postponement, Diamond-Star Motors Corp. will begin building the Mitsubishi Mirage and Eagle Summit this week.

Plans call for a gradual increase in production through year-end. About 200 will be assembled this month, 800 in August and 1,500 in September.

The company has not determined what the output will ultimately be, a Diamond-Star spokeswoman said. "It's really now up to the market to determine how many we produce," she said.

The car will also continue to be shipped from Japan, where two-door hatchback and four-door sedans are built. Diamond-Star will build only the four-door model.

A third product could be added at Diamond-Star, a 50-50 joint venture between Mitsubishi Motors Corp. and Chrysler Corp. in Normal, Ill.

The plant was designed to produce up to five different vehicles simultaneously, with a total capacity of 20,000 units a month, or 240,000 annually. It is currently building about 13,000 units a month of one sports coupe — the Mitsubishi Eclipse/Plymouth Laser/Eagle Talon.

The remaining 7,000 units of monthly capacity are not likely to be consumed by the Mirage/Summit, the spokeswoman said.

The Mirage/Summit is selling at a combined rate of about 7,240 units a month — about 5,880 Mirages and 1,360 Summits.

The Eagle model is selling at a slower pace than last year, while the Mitsubishi version has increased sharply. From Jan. 1 to June 10 of this year, Eagle sold 6,810 Summits, down from 9,709 during the same period last year. Mitsubishi sold 29,396 Mirages through the end of May, up from 7,380.

Production of the Mirage/Summit was originally scheduled to begin at Diamond-Star last November. At that time, the manufacturer announced a half-year postponement, saying it would instead devote more resources to producing the Eclipse/Laser/Talon.

The current production level of 13,000 to 14,000 Eclipse/Laser/Talon a month is higher than originally planned.

Shortly before the original November launch date, Diamond-Star also completed a second-shift hiring at the plant, six months ahead of schedule.

AROUND THE WORLD

West Europe sales continue climb

New-car sales rise 3% in May; volume up 1.6% over last year

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — New-car sales in Western Europe continued at a record pace in May despite almost universal predictions of imminent decline.

Sales in 17 markets climbed 3 percent to 1,216,500 units during the month, according to estimates compiled by *Automotive News*.

European new-car volume for the first five months of 1990 was 6,124,100, up 1.6 percent over last year. The full-year total in 1989 was a record 13.4 million.

The Volkswagen and Fiat groups continued neck and neck at the top of the heap, with VW-Audi-Seat holding a slim advantage through five months.

VW group sales in the five-month period totaled 926,700, equal to a 15.1 percent share of the market and an improvement of 5.5 percent in volume. Fiat Auto S.p.A, including Fiat, Alfa Romeo, Lancia-Autobianchi and Ferrari, came in at 910,500, a 1.7 percent increase over last year and a 14.9 percent share.

Capacity limits still constrain Peugeot S.A., General Motors and Ford Motor Co. Third-place Peugeot was 0.4 percent above last year's total at 796,100 units and held a market share of 13 percent. GM was fourth at 725,000, up 3.5 percent. GM's market share was 11.8 percent.

Ford, slowed by strikes in Britain earlier this year, was at 710,500 through May, an increase of 0.8 percent and an 11.6 percent share. Sixth-place Regie Nationale des Usines Renault S.A. held 10.3 percent of the European market through May on sales of 628,400, a 1.3 percent gain.

Mercedes-Benz and BMW were down slightly. Mercedes was off just under 1 percent at 191,600, a 3.1 percent market share in Europe. Rival BMW declined 4.4 percent to 168,500, a 2.8 percent share.

Japanese carmakers combined held a 10.9 percent market share through the first five months on sales of 669,700, a gain of 3.2 percent.

Though Nissan sales were down 6.6 percent to 167,600 through May, it remained the top Japanese make in Europe with a 2.7 percent slice of the market. Toyota followed at 155,600, a 4.2 percent gain over last year and a 2.5 percent share.

Mazda is picking up steam in Europe. Sales this year spurted nearly 15 percent to 119,400, a 1.9 percent share in the first five months and 6,100 cars ahead of faltering Volvo. Volvo sales dropped 6 percent to 113,300 during the period.

Among national markets, West Germany surged more than 15 percent to 286,000 units in May, pulling its year-to-date total up 4.9 percent to 1,310,700. Italian sales slipped 1.1 percent to 221,000 for the month, though Italy was still 3.3 percent ahead of last year at 1,154,300 for five months.

French sales rose 17 percent to 198,000 in May and 8 percent for the full year to 1,037,700. But the British market is reeling from high interest rates. Sales were off nearly 10 percent to 923,400 for the first five months of 1990 following a 13 percent drop to 173,900 in May.

The Spanish market also continues to suffer, with sales down nearly 10 percent in May to 89,000 units. Volume in Spain was off 8.6 percent for the year to 443,300.

Hungary's bankrupt bus maker to reorganize; may go private

By Richard W. Bruner
STAFF CORRESPONDENT

BUDAPEST, Hungary — Ikarus, the state-owned bus maker, will reorganize under bankruptcy proceedings and probably will emerge as a privately held company.

A spokesperson for the government's Ministry of Industry and Commerce hinted that the Central European Development Corp. could be a major contender for stock ownership.

The corporation is headed by Marcus H. Palmer, former U.S. ambassador to Hungary, and Ronald Lauder, heir to the Estee Lauder cosmetics and fashion empire. Central European Development Corp. has proposed a corporation that would include employee ownership.

Ikarus says it has obtained orders worth $100 million from Western buyers. It also expects to benefit from next year's change to accounting in dollars rather than rubles in its trade with the Soviet Union and Eastern Europe.

Ikarus' troubles grew out of the government's suspension of all export agreements that dealt in rubles. When the embargo went into effect in January, the surplus was 250 million rubles, which amounted to an open-ended interest-free loan to Eastern Bloc nations, especially the Soviet Union.

Ford, Olds, imports rev up incentives

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co., Oldsmobile and several importers announced new or adjusted incentive programs last week.

Ford's buyer incentive on 1989 and 1990 trucks, which was scheduled to end July 9, has been extended until Aug. 8. Rebates are: Aerostar, $600; Bronco II and Bronco, $1,500; Ranger, $1,000; and F series and Econoline/Club Wagon, $600.

Oldsmobile added a $1,500 consumer incentive on 1990 88 Royale models until Aug. 2 in the following zones: Charlotte, New England, New York, Washington, Chicago, Kansas City, Minneapolis, St. Louis, San Francisco and Los Angeles.

Cadillac's customer incentive pays $1,500 on DeVille, Fleetwood and Brougham and $2,000 on Eldorado and Seville until Sept. 26.

Audi of America is paying dealers $1,500 on its 100-series models until Sept. 10.

Mitsubishi Motor Sales of America is paying rebates to customers and dealers until Aug. 31. Payments vary by regions.

Customer rebates are $1,000 to $2,000 on Galant, $500 to $1,200 on Mirage, $750 to $1,000 on two-wheel-drive pickups and $2,000 on Sigma, Montero and 4wd pickups.

Dealer rebates are $500 to $2,000 on Galant, $200 to $1,200 on Mirage, $250 to $750 on 2wd pickups, $2,000 on Sigma, $500 on Eclipse and Montero and $250 on 4wd pickups.

Subaru of America is offering customer rebates of $1,200 on 1990 Loyale wagons with automatic transmission and $800 on all other Loyales. The rebate is $1,000 on 1989-90 Justy ECVT and $500 on other 1989-90 Justys.

Also, Subaru dealers earn rebates on Legacys: $2,500 on L+ sedans with automatic transmission, $2,000 on base and LS sedans and wagons with five-speed or automatic and $1,500 on other Legacys. The programs expire Oct. 2.

American Isuzu Motors is paying its dealers rebates on 1990 pickups and Troopers, based on the number sold: 1 to 20 units, $700; 21 to 40, $900, and 41 and above, $1,100.

After selling 10 4x4s, dealers receive an additional $100 on every pickup sold. The program expires Sept. 30.

Toyota Motors Sales U.S.A. is offering factory-to-dealer incentives on some cars and trucks through Sept. 4. Dealers earn $200 to $1,000 on 1989 and 1990 Tercels and Corollas and $400 to $1,200 on Camrys. On trucks, the rebate is $700 to $1,400 on base models and $300 to $1,000 on others.

INCENTIVE WATCH

DEALER INCENTIVES

	Rebate	Expiration Date
Chrysler Corp. (1990 models)		
Grand Caravan, Grand Voyager, Town & Country	$500	July 17
Dodge Shadow, Plymouth Sundance	$750	Aug. 31
Ford Motor Co. (1990 models)		
Taurus SHO	$1,000	July 9
Tempo	$250	July 9
Topez, Sable, Cougar	$300-$1,500, quota (only in New York, New Jersey, New England)	July 31
Grand Marquis	$1,000	July 9
Continental, Mark VII	$600-$1,000	July 9
Ford Motor Co. (1989-1991 models)		
Crown Victoria, Grand Marquis	$100-$500 based on number sold*	July 9
*$200 extra on each sale if dealer meets Escort/Tracer sales quota.		
General Motors (1990 models)		
Buick Estate Wagon	$1,000	Aug. 2
Corvette	$2,000-$4,000 based on sales	July 9
Chevrolet Geo, Celebrity	$500-$1,000	July 9
Geo Tracker	$1,000	July 9
Oldsmobile Cutlass Supreme, 88, Custom Cruiser, 98	$750-$1,250, based on sales	Aug. 2
Pontiac Firebird	$500	Aug. 2
Audi (1990 models)		
100 Series	$1,500	Sept. 10
Hyundai Excel (1989-90)	$200, quota	July 10
Isuzu (1990 models)		
Pickup, Trooper	$700-$1,200, based on number sold	Sept. 30
Mitsubishi (1990 models)		
Cars	$200-$2,000*	Aug. 31
Trucks	$250-$750*	Aug. 31
*Quotas apply on Eclipse and 2wd pickups in some regions.		
Nissan (1990 models)		
Sentra, Stanza	$300-$1,500	Aug. 2
Trucks	$1,000	Aug. 2
Axxess	$1,000-$1,500	Aug. 2
Saab (1990 models)		
9000 Series	$1,500-$4,000, quota	July 31
Subaru (1990 models)		
Legacy	$1,500-$2,500	Oct. 2
Suzuki (1989-90 models)*		
Swift	$400-$2,000	Aug. 2
Samurai	$1,000	Aug. 2
Sidekick	$1,000-$2,500**	Aug. 2
*Customer rebate or dealer rebate; dealer's choice. **$3,000 in California		
Toyota (1989-1990 models)		
Tercel, Camry, Corolla	$200-$1,200, quota	Sept. 4
Trucks	$300-$1,400, quota	Sept. 4

Note: Some makers offer rebates to dealers on sales of 1988 and 1989 models. Those programs are omitted from this table because of the limited number of those vehicles still in dealers' hands.

REBATE

FROM PAGE 1

According to a letter to L-M dealers, "the current environment" for rebates and discounts has become confusing and inflexible for customers and dealers. The regional dealer rebate program is designed to be simple and to allow the dealer to tailor promotions to the local market.

Each dealer has been given an objective for combined Topaz, Cougar and Sable sales. For cars sold up to 30 percent of quota, the dealer receives $300 per unit. The rebate is $500 for sales from 31 to 75 percent of quota; $900 for sales from 76 to 100 percent of quota; and $1,500 for sales over 100 percent of quota.

All 1989, 1990 and 1991 Grand Marquis and 1989½ and 1991 Tracer units sold or leased during the program period will count toward the total sales objective, but those cars are not eligible for cash payment per unit.

To give dealers an example of how big the payout could be, L-M described a dealer with an overall sales objective for the program of 100 vehicles. Sales of 17 Grand Marquis and 15 special leases on Cougar, Sable and Topaz would count toward the objective, and sales of 25 Cougars, 20 Topazes and 35 Sables would bring the dealer a $62,000 bonus.

Cars purchased under L-M's special discount plans for employees, retirees and suppliers are ineligible for dealership cash payments.

Wednesday, L-M will give dealers an advance payment representing 50 percent of anticipated earnings at 100 percent of quota.

TRUCK STAFF

FROM PAGE 3

eral newly appointed managers.

- D.J. Honiss, formerly a product planning manager, becomes manager of the current programs planning department.
- E. L. Volker, formerly a Kentucky Truck plant engineering manager, moves to the advanced programs product planning department.
- E.H. Proctor, formerly a product plans manager with heavy truck, becomes manager, heavy truck business and strategy planning.
- Jeffrey Kahn, former heavy truck marketing manager, becomes customer interface manager.

Reporting to Merrifield are four new appointees.

- T.L. Huber, formerly Great Lakes regional sales manager, is the new manager of dealer sales, Ford Heavy Truck.
- T.A. Ryan, formerly national account representative in heavy truck sales, is now manager, marketing program department
- T.J. Gross, formerly manager, company-financed dealership operations department, has become manager, dealer development department.
- J.E. Fink, formerly operations manager, Great Lakes region, was named manager, competitive price assistance department of Heavy Truck Operations.

FORECAST

FROM PAGE 1

Analysts also noted Geo's strong performance, saying Chrysler' retreat from the low end of the market, and the mid-spring debut of Ford's new Escort helped GM's first-half results.

David Healy, analyst with New York-based Barclays de Zoette Wedd, has the grimmest view of the economy, calling the next six months "borderline recession."

"Car sales will be sluggish this year and well into next year until the market works itself out of its saturation," he said.

Imports and transplants will pick up three percentage points in market share this year to 31 from 28, according to Healy.

Michael Luckey, with New York-based Michael Luckey Consulting Group, is more concerned about 1991 than the next six months.

"A potential tax and reduction in government spending representing a reduction of $50 billion in purchasing power could push the economy into a mild recession," he said.

Car and truck inventories appear to be in line with current market demands, according to most analysts.

The only area of contention is the extent of incentives auto companies will roll out in August to close the model year.

"Incentives will continue at a slightly reduced rate but there will be no end-of-season fire sale," says Healy.

Luckey agrees. "There is no need because inventories are in line with demand."

But he said if GM does come out with incentive programs, Ford and Chrysler will follow.

Ford is having a rough year largely because the Tempo, Taurus and Topaz are dated, said Luckey.

"Transplants are the clear winners," said Ann Knight, with New York-based Paine-Webber Inc. "The transplants have more capacity on stream and people love their cars. Honda and Toyota sell everything they can produce in the U.S. They have been increasing market share and that will continue."

Analysts say transplants will gain 3 or 4 percentage points in market share this year.

William Pochiluk, president of Autofacts, Inc. based in Pennsylvania, says light truck sales are buoying the market. "The weakness in the market is the car side not the truck side," he said.

He expects automakers to place more emphasis on retail incentives and less on dealer incentives.

"It's too difficult to track and there is no bang for the buck," he said. "There is a trend away from dealer incentives."

Knight says the market is meeting normal replacement needs and there is no pent-up demand.

SALES

FROM PAGE 1

cant increase," said Tom Webb, chief economist for the National Automobile Dealers Association. "Weak underlying demand and a cautious consumer will hold future increases in check."

Car sales for the Big 3 dropped 8.57 percent to 3,038,081 in the first half. Chrysler led the drop with car sales of 403,078, down 17.02 percent from a year ago. Ford's car sales fell 9.60 percent to 980,393. General Motors suffered the least, with 1,654,610 car sales, off 5.59 percent from a year ago.

Sales of cars made by Japanese automakers were up 9.32 percent to 1,322,459 in the first half, mainly because sales of transplants jumped. Sales of Japanese imports were off 9.32 percent, but transplant sales shot up 44.40 percent.

Market share for Japanese cars climbed to 27.32 percent in the first half, compared with 23.75 percent a year ago. Toyota and Honda took the biggest chunks of the gain. Ford and Chrysler saw their car market share slip in the first half. GM's car share edged up two-tenths of a point. European makers held steady with last year at 4.89 percent of the car market.

Industry car sales for June were off 3.54 percent at 856,672 units. Big 3 car sales dropped 7.17 percent to 565,736. Only Japanese nameplates had higher sales in June with 233,731 cars sold, up 8.31 percent from year-ago levels.

In the last 10 days of June, GM's sales of domestically-made vehicles climbed 17.80 percent, cars rose 12.90 percent and trucks jumped 29.87 percent. Ford sales were up 3.37 percent, with higher truck sales more than offsetting a drop in car sales. Chrysler sales were off for both trucks and cars.

OBITUARIES

Charles G. Belisle

TORONTO — Charles G. Belisle, president of Belisle Automobiles Inc., a Chevrolet-Oldsmobile-Cadillac dealership, died June 2. He was 62. Mr. Belisle had been president of the dealership since 1958.

Leon Ray

MIAMI — Leon Ray, founder of the South Florida Auto Show, died April 24. He was 69.

DON'T GET 'd

HIRE THE RIGHT PEOPLE!

FREE "DEMO" EMPLOYEE PERSONALITY TEST!

REDUCE EMPLOYEE TURNOVER IN YOUR DEALERSHIP TYPICALLY BY 20%!

WANT MORE SALES AND PRODUCTIVITY? Our test will tell you what really motivates your employees! Discover an employee applicant's strengths, weaknesses, vocational aptitude, and many critical personality attributes that are often hidden in an interview or background check. ***Find out who is highly susceptible to drug and alcohol addiction, prone to dishonesty, suffering extreme stress, or has a "chip on their shoulder."*** For the first time you can really "know" the person behind the face before you make a decision to hire or promote.

CLINICALLY VALID! OUR TEST REPORT ACCURACY WILL AMAZE YOU! Created by nationally recognized Doctors Johnson and Johnson in cooperation with three leading universities. Ideal for automobile dealerships. The test is valid and legal for all occupations in an automobile/truck dealership.

A RARE, STRAIGHT FORWARD OFFER! Order toll free today. Our **FREE** test will be mailed to you with an M.P.L. Personality Analysis Test Kit™. It has everything you need to successfully test yourself and SIX employee applicants or existing employees. After you have taken the FREE demo test, FAX it to our lab. We will immediately FAX your test results back to you. If you are satisfied with our service and the quality and accuracy of your test results, we will bill you for the Test Kit with the SIX remaining tests (test results and lab services are included). If you are not satisfied, tear up the bill, mail the Test Kit back to us within ten days and owe us nothing.

ORDER TODAY! OUR KIT PRICE IS GOING UP! For a limited time the price is only $89.95. Price includes complete, easy to use Test Kit with instructive documentation, SEVEN tests, and lab services providing a computer generated personality analysis report on each individual tested.

ADDITIONAL TESTS CAN BE PURCHASED FOR $10.00 EACH. Price includes a complete multiple page personality analysis lab report on the individual you test. ***Receive test results same day as FAX'ed.***

HURRY! FREE DEMO OFFER EXPIRES IN 30 DAYS!

PRICES

FROM PAGE 1

All three companies held the line on some models.

As always, it will be difficult for consumers, dealers and other interested parties to determine exactly what the makers do to their 1991 prices. A stack of price books and an infinite amount of time and patience will be required.

The makers will try to diminish the impact of the price increase by comparing 1991 and 1990 models on a "comparably equipped" basis. That means that the price of every speck of new-for-1991 standard equipment will be added to 1990 prices before comparisons are made.

And, as noted, the final 1990 figures will include the summer price hikes; those boosts won't show up as 1991 increases.

Also, some major equipment additions are likely. Anti-lock brake systems, which cost as much as $1,000 as optional equipment, will be standard on more models in 1991.

Some models, like GM's luxury cars, have been restyled, and that will mean a price hike that is termed "product improvement."

Some "1991" models have already had two price increases. In April, Ford decided that its 1990 Ford Crown Victoria and Mercury Grand Marquis should be called 1991 models. There were no changes in the cars, just in the prices. The cars went up $353 at that time and another $61 in June.

Chevrolet Caprice, introduced as 1991 model last January, also has had two rounds of pricing activity well before the beginning of the 1991 model year. So have Chevrolet Camaro and Pontiac Firebird, although most of those changes were minimal.

At the start of the 1990 model year, GM raised prices an average of 3.5 percent, or $525 a car. Ford boosted prices 4.9 percent, or $696; 2.8 percent to cover higher costs and 2.1 percent for the cost of passive restraints. Chrysler advanced prices by about 5 percent, or $700.

The 1990 increases were higher than in recent years because of the addition of federally mandated passive restraints. The cost was more for Chrysler, which installed air bags in all cars built in its U.S. plants, and Ford, which equipped 40 percent of its 1990 cars with air bags. GM installed air bags in only 15 percent of its cars.

Price increases in the 1989 model year ranged from 2.3 percent to 2.9 percent. In 1988, price hikes were less, ranging from 1.3 to 1.9 percent.

PRODUCTION

Car output dips in June, quarter, half

By Karen Detkowski
AUTOMOTIVE NEWS STATISTICIAN

Auto production in the United States trailed the year-ago total for June, the second quarter and the first half.

U.S. automakers in June assembled 612,126 cars, 1.35 percent below the prior month and 0.13 percent below the year-ago month.

Car production during the second quarter of 1990 totaled 1,741,896 units, 18.15 percent above 1990's first quarter production, but 9.81 percent below 1989's second quarter.

First-half car output totaled 3,206,750, down 16.29 percent from 1989.

Domestic truck producers built 396,756 units in June, 2.70 percent below the prior month, but 4.20 percent above the year-ago month.

Truck assembly in the second quarter was 1,142,812 units, 55.31 percent above the first quarter and 0.13 percent above 1989's second quarter.

In the first half of this year, 2,099,045 trucks were assembled, down 8.72 percent from last year.

With 14 plants down for model change, vacation or inventory adjustment last week, automakers scheduled production of 70,429 cars, 49.53 percent below the prior week, but 72.09 percent above the year-ago week.

Truckmakers scheduled 38,066 units last week, 57.40 percent below the previous week, but 22.90 percent above the year-ago week.

GM will close its Willow Run, Mich., facility for two weeks to add specially equipped police and taxi fleet vehicles to that plant. Also, the Van Nuys, Calif., Firebird-Camaro plant will be down two weeks to adjust inventories.

Ford Motor plants return from vacation July 16, but the Dearborn, Mich., plant will be down an extra week because of a lack of dealer orders for Mustang.

12-year peak for Canada cars

Canadian auto producers assembled 106,130 units in June, the highest for that month since 1978 when 117,848 cars were produced. June production rose 1.12 percent above the prior month and 15.79 percent above the year-ago month.

Because of vacations at Ford Motor and changeover downtime at Chrysler Corp., scheduled car production of 12,654 units last week fell 62.47 percent below the previous week. It was 48.87 percent above the year-ago week.

Canadian truck production in June totaled 82,245 units, 4.37 percent below the prior month and 7.62 percent below last year.

Last week's estimated truck production of 8,200 fell 62.42 percent below the previous week and 31.20 percent below the year-ago week.

An attempt by independent Canadian truckers to block the tunnel and bridge that connect Detroit and Windsor, Ontario, fizzled out last week because of lack of participation. Assembly operations in the United States and Canada were not affected.

Wagner gives Ford dealers a 'beat Chevy' pitch

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Wagner

Ford Division aims to recapture the car sales lead from Chevrolet by increasing 1991 Escort sales and getting dealers to exceed their monthly car quotas.

Ford will increase local advertising, and foresees a modest rebound in industry-wide car sales for the third quarter.

In a July 9 letter to dealers, Ford Division General Manager Thomas J. Wagner called Ford's 1990 car market share "disappointing." He told dealers to go after the local car business and to sell their monthly car sales objective as "an absolute minimum."

Ford Division sold 700,020 cars in the first half of calendar 1990, trailing Chevrolet's 744,655. A year ago, Ford outsold Chevy by 68,305 cars in the first half. Chevrolet last held the midyear car sales lead in 1987. Ford is still outselling Chevrolet in combined cars and light trucks.

"Car market share is what the pundits, the press and the analysts all talk about; it is the visible report card on our momentum in the market," Wagner said in the letter.

"We have had that momentum and good press over the past five years; we can have it again in 1990 — if we want it. But if we don't work together to get there, it will belong to someone else," he added.

Some Ford dealers said Wagner's expectations of Ford dealers were realistic. Others said Ford, like other manufacturers, wants to blame dealers for slow sales.

"The factory's expectations are always high," said James Hoffer, general manager of Jordan Ford in Mishawaka, Ind., the top-volume Ford dealership in the United States. "When market share is down, right away the factory comes after the dealer body and comes out with grandiose marketing plans to regain sales."

Ford picks Hungary as site for parts plant

By Richard W. Bruner
STAFF CORRESPONDENT

BUDAPEST, Hungary — Ford of Europe is expected to announce today plans to build a $60 million - $70 million parts plant in western Hungary.

A news conference is scheduled for 4 p.m. in Budapest (10 a.m. EDT).

The venture would mark Ford Motor Co.'s first modern foray into Eastern Europe. Although the project is small compared with other makers' recent deals in the East Bloc, it squares with Ford's stated intent to concentrate initially on relatively modest component joint ventures in Eastern Europe before actively pursuing vehicle assembly agreements.

According to Hungarian government spokesmen, Ford will build ignition system coils and electronic fuel pumps for export at a plant in Szekesfehervar.

As part of the deal, Ford vehicles will be shipped to Hungary and sold there in a type of barter arrangement to compensate for the exported parts, spokesmen said.

Car imports will start this year, but production at the plant will not begin before 1993, according to the government. The barter balance will not be achieved before 1996.

The spokesmen said Ford will be exempt from taxes for 10 years and would invest all profits back into

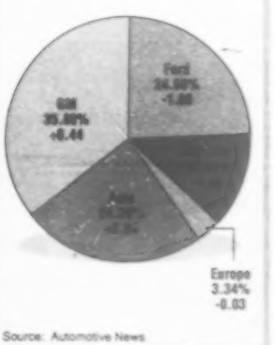
GM, Japanese gain

Ford, Chrysler lose share in first half

Car & light truck market

Sections show market share for first half of 1990 and change in percentage points from first half of 1989.



Source: Automotive News

AUTOMOTIVE NEWS / CHARLOTTE WINTER

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

The introduction of new products is paying off for General Motors as the No. 1 domestic automaker continues to pick up market share at the expense of Ford Motor Co. and Chrysler Corp.

For the first six months of 1990, GM's share of the U.S. car and light-truck market rose 0.44 of a percentage point to 35.89 percent.

Ford Motor Co. lost nearly a point and fell to 24.06 percent; Chrysler Corp. tumbled 1.65 points to a 12.42 percent share.

The Asian automakers — led by Toyota, Honda and Mitsubishi — continued their assault, picking up 2.24 points and garnering a combined 24.30 percent share.

But, overall, sales were down.

Through June, 7,263,702 cars and trucks were sold in the United States, down 3.63 percent from 7,537,179 in the same period last year. Most of the decline was in car

Retiring chairman transformed GM, bought EDS and Hughes, closed plants, lost market share

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors Chairman Roger B. Smith beamed like a proud father showing off his first-born son as he wheeled the white pickup truck through the opening in the drapes.

Hundreds of GM hourly workers waited on the other side of the curtains. On that July day in 1987, they were there to celebrate the first salable vehicle built at GM's brand new assembly plant in Fort Wayne, Ind.

But when Smith jumped out of the driver's seat, the crowd booed.

And the workers continued to jeer Smith as he took the microphone for the ceremony dedicating the $500 million plant. This, after all, was the man the workers held responsible for closing a dozen GM assembly plants, and even more parts plants, forcing more than 30,000 of their brothers and sisters out of jobs.

Undaunted, Smith marched through the plant, shaking hands and chatting with workers on the line as if he hadn't heard a word.

Smith marched through the most tumultuous decade in GM's history with the same assurance he displayed at the Fort Wayne plant.

Automotive historians undoubtedly will depict Smith, who retires July 31, as the chairman who — for better or worse — changed the face of the world's largest manufacturing corporation more than any chairman since Alfred P. Sloan Jr. Sloan chaired GM from 1937 to 1956.

Sloan defined the General Motors that nurtured, developed and shaped Smith. Roger B. Smith is a product of Sloan's GM — a GM that Smith decided needed redefinition and evolution when he became chairman Jan. 1, 1981.

Redefining GM for the next century became his goal.

Ask Smith how he would like the history books to treat him and he'll tell you he doesn't care.

"I don't even care if they spell my name right," says Smith in an interview. "I don't expect them to build a big stone monument to me. That's not my goal in life."

Minority suppliers complain GM not living up to goal

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Minority auto suppliers say the $1.15 billion that General Motors spent with them last year is barely half what it should be.

They stated their concern in a letter last week to Chairman-elect Robert Stempel.

GM spokeswoman Karen Longridge acknowledged receipt of the July 9 letter and said GM officials are likely to meet with the suppliers, although no date has been set.

"We understand that minority and non-minority firms are facing competitive times," Longridge said. "We're proud of our minority supplier development program."

The letter, written by Detroit attorney Sharon McPhail for the National Association for the Advancement of Colored People, says the NAACP believes that GM has not lived up to the Statement of Fair Principles it signed in January 1989.

All three domestic auto companies have signed fair share agreements to provide equal economic opportunities for minorities.

The GM agreement took four years to negotiate. Longridge said that GM committed itself to increase business with minorities, but that no specific numbers were pledged. She said the company spent $50 million more in 1989 than 1988 with suppliers.

"We committed to increase dollar purchases, and we are doing that," she said.

McPhail contends GM set a goal to spend $2 billion with minority suppliers by 1990.

"The intent was that business would move much further," McPhail said. "That has not happened; they're spending $1 billion less than estimated."

She cited examples:

- Contracts to O.J. Transport Co., a truck hauling firm in Detroit, have dipped to $300,000 from $3.5 million in the mid-1980s;
- Trumark Inc., a Lansing, Mich.-based metal stamper, did $5.5 million with GM last year, down from $16.8 million in 1985, the year it was bought from white owners.

Michael Guthrie, executive vice president and co-owner of Trumark, said that in the first year he and his brother bought the company, it lost the contract for manufacturing a control arm for GM. That contract accounted for 40 percent of Trumark's volume and 90 percent of its profits.

He said the GM buyer took the contract to a white-owned firm.

"This is one of the things that scares buyers — the reliability of a (supplier) company," Guthrie said. "The last thing they want is insecurity; they want to know that a business can come through."

Toyota unveils new Camry models

Toyota Motor Corp. has introduced new Camry and Vista models in Japan. Two versions were shown: four-door sedan, left, powered by a 2.0-liter twin-cam 16-valve; and the V-6 powered Camry Prominent G with 4-wheel steering. The new style emphasizes a low nose, high-deck silhouette, flush surfaces and consolidated side molding. All models use three-point seat belts front and rear; anti-lock brakes and air bags are options. A new U.S. Camry is expected in the 1992 model year.

Ford pays rebate on 1991 Escort

By Arlena Sawyers and Laura Clark
AUTOMOTIVE NEWS STAFF REPORTERS

Ford Motor Co. last week extended its buyer incentive program and reversed its no-rebates launch strategy for the 1991 Escort and Tracer by placing dealer cash incentives of up to $500 on the cars.

The company is also paying dealers up to $2,500 on sales of Lincoln Town Car and up to $2,000 on Continental and Mark VII.

Volvo Cars of North America, which normally shies away from incentive programs, recently enacted factory-to-dealer incentives.

Meanwhile, Chevrolet and Hyundai extended and/or revised buyer and dealer incentive programs.

Ford cited a "slower than expected launch" and "out-of-balance production" skewed to 1991 Escort base and LX models and a shortage of wagons, four-doors and GT models. Ford spokesman Jay Meisenhelder said output of Escort GT models was restricted early in the production cycle because of a component shortage.

Ford is offering dealer rebates on both 1990 and 1991 Escorts from July 10 to Aug. 8. If the dealer sells one 1990 or 1991 Escort, he receives $200 for that car. If he sells two or three Escorts, he receives $300 per car. If he sells four or five, he receives $400 per car. If he sells six or more Escorts, he receives $500 per car. The Tracer rebate and time period are the same.

The payments are not retroactive to the sale of the first car.

Ford dealerships in Puerto Rico or the U.S. Virgin Islands receive $400 per 1990 or 1991 Escort — with no sales qualifiers — on each sale to a resident or enterprise within the 50 states.

Small dealers — or those who sell 300 or fewer units annually — receive $350 for every 1990 and

Toyota interested in more European ventures

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

> "We are quite satisfied with the joint venture with Volkswagen. We have a chance to talk with them and we are seeking another collaboration with Volkswagen if possible."
>
> **Hidenori Tsutsui**
> Toyota European general manager

BRUSSELS, Belgium — Toyota Motor Corp. would like to expand its current collaboration with Volkswagen AG and is also interested in cooperating with other car manufacturers in Europe.

In an interview, Hidenori Tsutsui, general manager of Toyota's European office, said the company is also interested in setting up a second assembly plant in Europe if uncertainties about Japanese import policy are settled.

Toyota is building its first European assembly plant in Burnaston, Wales. Production of a Carina II-class mid-range car will begin in late 1992, with output due to rise to 200,000 per year by the mid-1990s.

Early last year, Toyota began joint production of pickup trucks with Volkswagen at VW's plant in Hannover, West Germany. Each company markets units under its own badge. Sales have been disappointing, but Tsutsui said the partnership is working well.

"We are quite satisfied with the joint venture with Volkswagen," he said. "We have a chance to talk with them and we are seeking another collaboration with Volkswagen if possible. And not only Volkswagen, we are looking for any possibility — even with Renault, Peugeot, Fiat."

Tsutsui declined to specify possible areas of cooperation with European carmakers.

Volkswagen officials have regularly dismissed talk of extending the company's relationship with Toyota. Generally, European carmakers have demonstrated a reluctance to forge deep ties with the Japanese, although there are some small-scale exceptions. But Tsutsui said there are signs the European attitude is changing.

"It depends on the content of the talks," he said. As for past reluctance, he observed: "Maybe if they work together with us, they have no excuse to be against us."

Toyota is interested in a second European plant if the European Community's Japanese import policy is ironed out.

The European Commission has long debated how to control imports after the 1993 European market unification does away with existing national limits. But word out of Brussels recently is that EC officials now favor transitional restraints that would count transplant production toward the import ceiling.

"It depends on the agreement between the EC and Japan," said Tsutsui. "If transplants are counted as imports, we have no chance to set up a second plant besides the U.K.

"We can't say we don't want a second plant," he added. "If the situation would allow us, then we want to establish the second plant."

Toyota officials recently made a preliminary visit to the Bratislava commercial vehicle and Skoda auto factories in Czechoslovakia at the invitation of the Czech government. Tsutsui said the Japanese do not yet have close relationships with Eastern European countries.

He was cool toward Spain.

"Today, we can see the inflation in Spain and also the wages of employees are getting higher and higher, so in that sense we cannot see a big advantage in Spain," he said.

Toyota ranks just behind Nissan among Japanese makers in Europe with sales of about 350,000 units and just under 3 percent of the market. The company is currently launching its Lexus LS400 model in European market, though in limited numbers. Lexus sales started in March in Switzerland. The United Kingdom, Belgium and some Scandinavian markets have since been added. Sales in Germany are due to start in September.

Tsutsui said he expects volume of no more than 2,000 Lexus units in Europe next year.

Renault makes $99 million offer for full ownership of Mack

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Renault S.A. last week started a $99 million tender offer for the 16.5 million shares of Mack Trucks Inc. stock that Renault does not already own.

The $6-a-share offer, which expires Aug. 8, is conditioned on enough shares being tendered to give Renault 90 percent of Mack and on Mack's lenders agreeing to relax the terms of their loans to the truckmaker. Mack stock was trading at $7.00last Thursday.

Renault now owns 44.5 percent of Mack.

But three Mack shareholders have filed a lawsuit alleging that the proposed buyout is unfair. The lawsuit, filed in federal court in Philadelphia, charges the offer is too low and that the two companies conspired to manipulate the price of the stock.

The lawsuit claims that the simultaneous announcement of Mack's poor financial outlook and the Renault offer was part of a plan to place an artificially low price ceiling on Mack's shares and make it easier for Renault to take the firm private.

Mack announced that it expects a net loss of $130 million for 1990 and doesn't expect to be profitable before 1992. Renault said it was making the offer because of Mack's worsening financial condition and a need to restructure the company's debt.

The suit, which asks the court to order Renault to divest itself of any benefits it may obtain from the alleged scheme, was filed by shareholder Barbara Zarowitz and two companies, Lepow Equities and Peter Stuyvesant Ltd.

Based in Allentown, Pa., Mack has about 7,000 workers, according to Kim Blake, president of UAW Local 677.

Blake said a "successor clause" in the union's contract requires future owners to honor the existing wage pact. He said the contract runs through October 1992.

But Blake said that if Renault succeeds in its takeover bid, there is no guarantee that the French automaker "will not violate the UAW agreement. If that happens, the union will file a grievance or go to court."

Corrections

A chart in the July 9 issue mistakenly identified Ford of Europe's partner in a plant expansion under consideration in Saarlouis, West Germany. The partner is Mazda.

The 1990 Market Data Book options table should say that 100 percent, not 0 percent, of Toyota's imported engines are in the multivalve category.

Dealers looking for good news

NADA officer says negative stories may repel automotive ads

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Newspapers and other media may lose car advertising revenues if they continue running stories that dealers perceive as biased against the auto industry.

That's the warning Frank Anderson, first vice president of the National Automobile Dealers Association, issued to a gathering of the National Association of Classified Advertising Managers.

The NADA reported that the average new car dealership spent $154,000 in local dealership association and independent dealer advertising in 1989, down from $162,500 in 1988.

The advertising expense per vehicle remained at $261 for two years running because "there was the same decline in advertising as in new unit sales," said Tom Webb, chief economist at NADA. Last week, Anderson reiterated his criticism of some car ad sections.

While not citing specific instances, Anderson targeted newspaper "advertorial" sections that he said often carry "negative news stories" about the industry on the front page and auto ads inside.

He said dealers are not trying to control the media, but he believes the stories are often "inappropriately placed" and biased. He said such stories hurt sales and give dealers little reason to advertise.

"Say on the front page is a story about a car maker recalling 2 mil-

Nissan asks its suppliers to lighten up — seriously

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Like a chief executive asking department heads to slash costs 10 percent across the board, Nissan Motor Co. is asking its suppliers to cut the weight of their automotive parts by 15 percent to increase fuel economy.

So far, suppliers representing a tenth of the parts in a car have heard the appeal. Some U.S. suppliers were among the 200 who have been contacted, but Nissan would not identify them.

Nissan officials say they are responding to U.S. legislation introduced last year by Sen. Richard Bryan, D-Nev., calling for an across-the-board 20 percent increase in fuel economy by each manufacturer. Nissan hopes to approach that goal, but company officials do not think weight reduction can meet the bill's requirements.

Earlier this year, Nissan executives said a dramatic increase in fuel economy was virtually impossible without a major technological breakthrough because they have already used every method now available to improve mileage.

Nissan calls the move to reduce weight a "high goal." In general, a 1 percent reduction in weight is expected to produce a 1 percent increase in fuel economy.

So far, Nissan has made its weight reduction appeal to 200 selected suppliers who make 1,000 of the 10,000-plus parts that go into a car.

Among the suppliers contacted are component makers and suppliers of steel, aluminum and plastic.

Nissan hopes to see results within five years.

TAX PROBE: *IRS claims foreign makers duck taxes by inflating prices to U.S. subsidiaries*

By Diana T. Kuryiko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — A nine-month Congressional investigation has revealed allegations that some foreign automakers have been overcharging their U.S. distributors and taking other steps to avoid paying U.S. taxes.

Eighteen automobile and motorcycle distributors and importers are among the 36 American subsidiaries of Japanese, West German, British and Canadian companies suspected of "substantially understating their U.S. income-tax liability," said Fred T. Goldberg Jr., commissioner of the Internal Revenue Service, in a House hearing last week.

The names of the U.S. subsidiaries were disclosed only in a closed session before the Ways and Means subcommittee on oversight. They were not released publicly.

But in a separate hearing, House Majority Leader Richard A. Gephardt, D-Mo., said that in 1986, foreign-controlled auto operations in the United States had income of $7.7 billion but paid only $12 million in federal taxes.

Rep. David E. Bonior, D-Mich., joined Gephardt in urging Congress to crack down on the foreign companies before raising taxes to balance the federal budget.

"We should be telling Japan, if you sell your cars in the U.S., you're going to pay the same taxes we pay in this country," he said.

The IRS' Goldberg estimated the 36 companies had 1986 U.S. sales of $35 billion and may owe billions in unpaid taxes for 1987, the last year for which figures are available. The IRS estimates the auto subsidiaries alone owe $2.5 billion in back taxes.

Importers contacted by *Automotive News* denied any impropriety.

"They're looking for sources of revenue; what better place to get it than from foreign companies that are not voters," said James Olson, vice president for external affairs for Toyota Motors Sales U.S.A. Inc. "We had paid a lot of taxes."

Frederick Hanau, a senior vice president at BMW of North America Inc. and chairman of the Association of International Automobile Manufacturers, said, "No one knows what we are accused of, collectively or individually."

Hanau said that although no specific auto companies have been accused, the investigation has cast a shadow on the entire import industry and made it difficult for the association to defend its members.

Committee Chairman J.J. Pickle, D-Texas, charged that the companies under investigation "have failed to pay taxes despite the fact they have profited from selling billions of dollars of cars, motorcycles, stereos, televisions, VCRs, microwave (ovens) and other products to the American consumer."

Pickle, who reviewed some of the tax returns, said some companies that initially paid U.S. corporate income taxes later incurred "substantial losses" through illegal "pricing schemes" that allowed them to reduce current taxes and recoup previously paid taxes.

Of the 18 auto and motorcycle companies, 16 paid some federal income taxes. But four of those used carryback credits to erase

Replacements for Mitsubishi Van/Wagon, Colt Vista due in '91

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Mitsubishi Motor Sales of America Inc. will retire its boxy, slow-selling Van/Wagon and replace it next year with a wagon/minivan hybrid.

The Mitsubishi Expo will join the growing people-mover segment as a 1992 model. It will be available early next summer in two sizes — the Expo and a smaller sibling, the Expo LRV.

The 2.4-liter, two-valve Expo will have front bucket seats and two bench seats, seating up to seven. It will sell in the $11,000 to $13,000 range.

The 1.8-liter, four-valve Expo LRV will replace the Mitsubishi-badged Chariot in Japan. That vehicle is sold in the United States as the Colt Vista by Dodge and Plymouth, but not by Mitsubishi.

Mitsubishi sold less than 4,000 of its boxy Van/Wagon minivan last year.

portunity to sell the Expo LRV as well, said Richard Recchia, executive vice president of Mitsubishi Motor Sales.

The LRV will seat five adults in two buckets and one bench and will retail for about $10,000.

Mitsubishi will bring the Expo to U.S.A. drops its van/wagon hybrid, the Axxess, after the 1990 model year. Nissan cited the ill-defined nature of that segment as one reason it abandoned the vehicle after just a year on the market.

"There are significant differences in the exterior styling and Recchia. "These vehicles offer a bridge for compact and subcompact sedan buyers who don't want a minivan, but it will have maximum flexibility in configuration so that it's more than just a conventional station wagon."

Recchia also said the Axxess' price — starting at about $14,000 — was a major drawback.

Recchia says Mitsubishi expects to sell 15,000 of the larger Expo and 25,000 of the LRV annually. He believes the LRV will be popular with fleet buyers and Mitsubishi's own Value Rent-A-Car subsidiary. Both vehicles will have front-wheel drive as standard and an all-wheel-drive option.

The Van/Wagon starts at $11,229 for the cargo version and $14,929 for the passenger entry. Fewer than 4,000 were sold last year. It won't be available after current

Inventories rise slightly due to sluggish June sales

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Slower sales caused domestic new-car inventories to rise slightly last month.

Import sales also were down in June, but inventories dipped a bit in that category.

The July 1 stockpile of domestic cars was 1,504,624, an 0.23 percent increase from the unsold units on June 1. The 62-day supply was up from the 60-day supply in June.

The imports had 613,259 cars on hand for a 70-day supply; that compares to a 657,371 stockpile on and a 74-day supply on June 1.

Total industry car sales in June were off 1.76 percent from May, and the combined days' supply of domestics and imports rose to 64 days on July 1 from 63 days on June 1.

The average July 1 inventory for the last seven years has been a 61-day supply.

Chrysler's days' supply rose the most among the Big 3, climbing to a 68-day supply from 60 days on June 1.

General Motors' and Ford Motor Co.'s days' supply were about even from month to month. GM's edged up slightly from 63 to 64 days. Ford's dipped from 70 days to 69 days.

The highest days-supply among GM cars was the Buick Reatta with 174 days, up from 135 days June 1. Other GM cars with more than 100-day supplies were Buick Park Avenue; Oldsmobile Cutlass Supreme, 88 and 98; and Pontiac Bonneville.

Ford continued to see a marked improvement in its Probe inventory, which dropped from a 100-plus days' supply earlier this year to 57 days July 1. The Escort had a 62-day supply.

Days' supply declined at Ford Division, but increased at Lincoln-Mercury Division.

An increase in days' supply was posted by every Chrysler Corp. line except the Chrysler New Yorker and the Dodge Monaco and Dynasty.

Reliant sports-car project stalled; plans remain iffy

By Daniel Ward
STAFF CORRESPONDENT

LONDON — It is increasingly unlikely that the British Reliant sports car will be launched in the United States any time in the near future.

New York-based Universal Motors Group of Cos. Inc. holds the U.S. rights to market Reliant's Scimitar sports car, but there are no firm manufacturing plans.

The project cannot progress until Universal signs a manufacturing agreement with Reliant, but this is now nine months behind schedule. Development of the Scimitar SS2 for the United States is still not completed.

Geoff Chater, Reliant's managing director, stresses, "The ball is in Universal's court. We can go no further without a firm commitment from them. We are not hanging any hopes on what happens with Universal Motors." He adds, "They don't owe us much money."

Universal Motors president Jim Lawler said that Universal is still negotiating the wholesale price of the car, and he expected meetings to resume with Reliant officials.

Under contract to Universal, Tamworth-based Reliant Motor Ltd. built an SS2 prototype with an Oldsmobile Quad 4 engine in place of a Nissan turbo engine.

Lawler said the changes that have been made in the car justify the delays in bringing it to market.

"We're building a totally new car from what we started out with, which is not done overnight. I'd like to see the Big 3 do it in two years," he said.

Universal bought the Scimitar two-seater sports car project from Reliant in July 1988 with the aim of developing the fiberglass-bodied car for the United States. Reliant was to have manufactured the sports car for Universal to market in the United States.

At the time of the announcement, Universal claimed it would be selling the Reliant in America by early 1989, selling 2,000 vehicles in the first year.

LEGAL BRIEFS

Court backs Chrysler in audio antitrust suit

By Helen Kahn
SENIOR CORRESPONDENT

A federal judge says Chrysler Corp. hasn't restricted competition from audio retailers and distributors by equipping most of its vehicles with radio systems.

The ruling by U.S. District Judge Jan E. DuBois in Philadelphia stemmed from a suit brought by several distributors and retailers of auto sound systems.

They accused Chrysler of curbing competition by eliminating its radio delete option and offering option packages that compel the purchase of radios.

Antitrust laws forbid such "tying" if it has an anticompetitive effect.

The suit was brought by Town Sound and Custom Tops and three other independent companies whose customers include car dealers.

They sought to make Chrysler give "free choice" to car buyers and to pay treble damages for sales lost by independent distributors and retailers.

The court denied all motions and arguments by the plaintiffs.

Donald Lewis, plaintiffs' attorney, said there is a "lot more to be said before this case is finished." He is considering an appeal to the 3rd U.S. Circuit Court of Appeals.

Chrysler admitted that from 1983 on, it has steadily increased the number of vehicles sold with its sound equipment. According to the court, the figure now stands at 97 percent.

The suit, filed as a class action, attempted to speak for all independent radio and cassette firms doing business with Chrysler since 1984.

The court rejected plaintiffs' argument that Chrysler had "market power" because of its "unique and well known trademark."

Instead it agreed with Chrysler's broad definitions of the "tying" product market as being the entire auto industry, where Chrysler has a relatively small share and where it is a price follower rather than a price leader.

Chrysler also noted there are more than 70 distributors of sound equipment, with most having less than 10 percent of the market. Chrysler says its share ranges between 3 to 7 percent, not enough to restrain competition.

Other makers had settled out of court

Although the lawsuit filed in January 1988 against Chrysler by four sound equipment companies was the first federal class action, other antitrust suits have been filed against other automakers over the same issue.

General Motors and Volkswagen of America Inc. were sued in 1979 and Mazda Motors of America Inc. was sued in 1981.

Out-of-court settlements were reached with these automakers and voluntary agreements were made with others.

As a result, more than 17 million vehicles were offered with optional or deletable factory-installed standard equipment radios, according to the Car Audio Specialists Association.

At the time of the settlements, when AM radios were typically standard, automakers were "inhibited from installing stereos and cassette tape systems as standard equipment on millions of new cars," the association said. The agreements provided potential profits for car dealers and "kept the door ajar for some consumer free choice."

But those agreements expired at the end of the 1983 model year and have not been renewed. A "radio delete option is nominally available on a few cars today," says the association.

Judge OKs termination of Pa. L-M deal

A Pennsylvania judge has upheld Ford Motor Co.'s termination of University Lincoln-Mercury in Philadelphia.

Judge Joseph T. Doyle said the state's Board of Vehicle Manufacturers, Dealers and Salespersons acted properly when it dismissed the dealership's complaint against the termination.

Doyle said University could not appeal to the board because it had failed to maintain a dealer's license. The problems University alleged — withholding of financing, refusal to accept a certified check, removal of inventory — involved Ford Motor Credit Co., and the board has no jurisdiction over claims made about lending matters.

Fleetstar truck cleared in fatal accident

A Los Angeles jury has ruled that a 1975 Fleetstar truck that struck and killed a boy did not have a design defect because it lacked a crossview mirror.

Instead, the jury said the truck owner, California Rendering, and driver, David Begnell, were negligent and slapped them with $2.05 million in damages.

The case was brought by Florina Cantu on behalf of her two minor children. The truck and children were stopped at an intersection before the truck turned right as the children were walking ahead. One was injured and one was killed.

Cantu claimed the truck, a Fleetstar 2050 model made by International Harvester (now Navistar), had a flawed design because the manufacturer should have foreseen the need for a device to eliminate frontal blind spots.

Cantu also charged that the driver was negligent in failing to see the children and the owner was negligent in driver training and truck routing.

OUT OF THIN AIR

Infiniti, Lexus carve out distinct niches without robbing others' market shares

By Lindsay Chappell and Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTERS

The courtesy golf cart at Nesen Motor Car Corp. is moving in both directions these days.

Last winter, the Thousand Oaks, Calif., multi-dealership was shuttling more customers from its new Infiniti store to shop at its adjacent Lexus store than the other way around.

"We lost a lot of Infiniti sales to Lexus," confides Dean Wilkinson, Nesen general manager. "We'd loan an Infiniti to a customer for a couple of days, and later I'd see it sitting over in the Lexus parking lot.

"But things are changing now. Now we're actually losing Lexus sales to Infiniti."

In fact, Wilkinson reports, so far this month, the new Nissan Motor Corp. in U.S.A. luxury line has been outselling Lexus at his auto park. But that's nothing: For the past few months, he adds, it also outsold his Cadillac store.

Nationally, Infiniti sales for the first six months of this year reached 9,260 units. Sales at Lexus, the luxury division inaugurated by Toyota Motor Sales U.S.A. Inc. last September, totaled 28,439.

A few months ago, some industry observers had already labeled the Infiniti as the Japanese industry's first flop. The $38,000 Q45 flagship sedan was unveiled to a ho-hum showroom response, following zen-like advertising that never showed the new car. Consumers emerged confused, and dealers were ticked.

"Things were rough at first," concedes Jeff Gutting, general manager of Bob Moore Infiniti in Oklahoma City. "We fought with the company about the advertising, which didn't help us any. But all that was just the startup. We're selling pretty close to our planned allocation now. In a couple of months, we'll be selling everything we planned to sell."

Infiniti General Manager William R. Bruce says the division hoped to sell more but has been happy with its momentum. Sales climbed every month through May, when 2,115 were sold. June was the first month since last November's launch that didn't show an increase.

Industry attention has largely focused on Infiniti's low sales against Lexus so far, but both cars are clearly carving positions in the luxury market.

Just seven months after its arrival, Infiniti is selling neck-and-neck with Jaguar (9,450 units for the first six months of this year), and more than Porsche and Sterling combined (5,131 and 2,336).

Lexus, a conservatively styled V-8 equipped cruiser, already has surpassed Saab and Audi in U.S. sales and is within striking distance of BMW (31,487 units).

In addition, Lexus and Infiniti are still adding dealerships. Lexus' 28,000-plus first-half sales came from 103 dealers, representing about 276 sales per dealership. It will have 125 dealers in place by year-end. Infiniti's sales were the work of 63 dealers, selling an average of about 147 apiece for the first half. It will have about 95 dealers by October 1991.

Toyota has targeted sales of 60,000 Lexus cars this year, although the internal plan reportedly is to reach 100,000 annually in the early 1990s.

Nissan never set an Infiniti sales target. That could be one reason for the persistent view that sales are floundering.

If Nissan had publicized its lower sales targets at the outset, the argument goes, there would be less tendency for comparison to Lexus, which is outselling it more than three to one. Instead, Nissan has wound up in the defensive posture by claiming it never wanted to sell as many cars as Lexus. To avoid the same problem next year, the company will release 1991-model-year sales projections.

Curiously, the new Japanese luxury cars have seemingly built their markets out of thin air. Their combined 37,699 sales in the first half were not reflected by sales losses in other luxury brands. Declines at BMW and Volvo from the first half of 1989 totaled about 7,000 units. But at the same time, combined sales at Cadillac, Porsche, Jaguar, Audi and Honda's Acura Division were up more than 3,000 units.

Even Mercedes-Benz posted a sales gain of about 1,000 units for the period, despite claims from Infiniti and Lexus dealers across the country that many Mercedes owners are jumping the fence to Japanese luxury.

"I can't explain it," admits Barry Pryor, general manager of Sewell Lexus in Dallas. "You'd think Mercedes' numbers would really be off. It seems like we're going head-to-head with Mercedes every day."

Sewell is averaging 115 Lexus sales a month — well above his initial target of 65.

"I don't know where the buyers are coming from," he says. "Maybe they're people who have been wanting to get into the luxury market but haven't seen anything that's excited them until now.

"One thing's for sure," he adds. "The luxury market is the place to be right now."

Sales momentum pleases Infiniti chief

William R. Bruce is vice president, general manager, for Infiniti Division.

Have Infiniti sales met with expectations?

Candidly, in the first six months, we would have hoped to sell more. But it was never the number-one objective to sell more. So I'd say, volume overall — not bad. Momentum — excellent. And by the time October rolls around with the new model year, I think we'll have extremely good volumes.

Bruce

We never said we'd be the biggest. We said that if we focused on the U.S. luxury-car buyer and made him our No. 1 priority for product and service, we could be the best. But that whole story gets lost in the press because we are in an industry that's based on 10-day sales and volume is everything.

How do you grade the initial ad campaign?

I'd be less than candid if I said that we were pleased with the start. We expected to sell more cars during the launch phase, but I don't blame that on the advertising. The launch phase, with rocks and trees, I say lovingly, was a home run. It gave us 90 percent awareness and that continues.

What I would have changed is to have transition to the product story earlier. Clearly we should have done that. If we had we probably could have had a little faster start in terms of sales.

Lexus achieves varied launch targets

J. Davis Illingworth is vice president, general manager, for Lexus Division.

Are Lexus sales meeting expectations?

At this point, we are 756 units ahead of pace on our sales. We're tracking right about where we want to be, about 800 ahead on the LS400 and 64 behind on the ES250. It would've been a story if the 250 had been lagging, but it's picked up and we sold about 1,700 per month in the last few months, so we think it has hit its stride.

Illingworth

We talked a lot last fall about launching the Lexus name, that was our primary objective. Then we had to launch the LS400. And the third objective was to get the 250 going, and it took 90 to 120 days to get the marketing and advertising dollars behind the car.

Are your buyers turning out to be different than you anticipated?

Originally we thought 60 percent of our buyers would come from Asian makes, but in fact it's much smaller than that. We're getting good response from European and domestic buyers.

About 50 percent of the deals have been in cash, but that number is dropping as we move into the broader market. As we appeal more to the broader part of the market where there is less cash, we will see more payment and lease buyers.

Large cars are top gainers in Japan in first half of year

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Demand for bigger cars has nearly doubled in Japan this year, pulling new-vehicle sales up 13.4 percent for the first six months. June was even better with an increase of 20.9 percent.

The upward movement is concentrated in the upper end of the market. Sales of cars with engines larger than 2.0 liters jumped 93.9 percent in the first half, to 200,103 units. Compacts and subcompacts up to 2.0 liters were up 11.1 percent in the same period, to 2,017,121, and most of those sales were in the upper half of the segment.

Sales of new cars over 660 cc, plus trucks and buses, totaled 3,057,141 for the first six months of 1990.

Companies that rely on subcompacts showed a decline for the first half. Sales for Fuji Heavy Industries, not including minicars under 660 cc, declined 7 percent to 40,778. At Daihatsu Motor Co., which suffered a setback last year when the Applause was recalled, sales were off 8.6 percent to 26,053. Isuzu sales were down 5.6 percent; sales of the Gemini four-door sedan were disappointing, but this summer the company will introduce the 2-door sports coupe version that, as Geo Storm, has been a success in the United States.

The exception among small-car makers was Suzuki Motor Co., which enjoyed a 27.9 percent increase in sales to 18,486 units.

Sales of minicars (under 660 cc), which are calculated separately, rose 21.3 percent in June. Overall growth in the minicar market for the six months was 0.2 percent.

Imports jumped 39.7 percent for the first half of the year, to 113,622 units. West German cars led the import segment with a 63.52 percent share.

> Foreign companies have expanded their sales networks, set up their own subsidiaries and hooked up with Japanese manufacturers to sell their products.
>
> **Koji Endo**
> Nomura Securities analyst

Analyst Koji Endo at Nomura Securities said the trend toward large cars was partly responsible for the increase, but he also credited efforts of import makers. Foreign companies have expanded their sales networks, set up their own subsidiaries and hooked up with Japanese manufacturers to sell their products.

Most of the imports are in the 2.0-liter-plus category, which means their sales gains are being outpaced by those of the Japanese makers. Analyst Neal Doying at Baring Securities notes a drop in share for imports in the large-car market from 34.9 percent six months ago to 28.1 percent at the end of June. The only Japanese maker that lost market share in that segment in the first half was Honda, which has an aging Legend.

Toyota Motor Corp. leads the large-car luxury segment with 37.7 percent of the market, relying largely on sales of the Crown, which offers a 4.0-liter engine.

JAPAN SALES JANUARY-JUNE 1990

SALES

FIRST HALF

FROM PAGE 1

sales, off by 253,411 units.

A total of 4,840,682 cars and 2,423,020 trucks were delivered.

On the car side, Chevrolet Division was the leader as it was in the first quarter of the year, helping push GM's car share up to 36.23 percent.

Sales of new models played a major role. Geo Prizm sales were up 64.97 percent; Lumina, 409.38 percent; Caprice, 10.46 percent.

Other than Chevrolet, only Asian and luxury nameplates were ahead of last year's six-month figures.

Honda closing in

And Honda — which ranked fourth on the import and domestic car sales lists, moved closer to toppling Chrysler Corp. as the overall No. 3 car seller in the United States. Honda, including Acura, sold 434,257 cars through June, for an 8.97 percent share of the car market; Chrysler sold 435,534 cars for a 9.0 percent share.

And not far behind, Toyota, including Lexus, remains in the race for third place with an 8.04 percent car share in the first half. Last year's spread was wider; for the first six months of 1989, Chrysler had 10.65 percent of the car market; Honda, 7.46 percent; and Toyota, 6.15 percent.

"Chrysler is in big trouble," said Clifford Swenson, automotive economist for ECAP Inc. of New York, an industry consulting group formerly affiliated with Merrill Lynch. "Its big market has always been vans and sport-utilities. Now that's increasingly competitive."

Chrysler's truck sales slumped by 51,736 units, and the company's truck market share fell from 21.21 percent to 19.25 percent.

Swenson said ECAP is "bearish on Ford" as well. "The competition has gotten a lot better," he said. "Major product lines won't be redesigned for some time."

Only three Ford car models posted first-half sales gains: Lincoln Continental and Town Car and Ford Crown Victoria. As a result, Ford's car share dipped to 21.11 percent from 22.73 percent.

Other nameplates to increase car sales were Mazda, Cadillac, Mitsubishi, Acura, Mercedes, Suzuki, Audi, Jaguar and Porsche.

"The upscale (market) is doing much better," said ECAP's George Magliano, "the real upper reaches" such as Porsche, Corvette and Mercedes. He attributes the increases in luxury car sales to an upgrade in the products. "In that market, the money is always there," he said. "You've just got to give them product.

"BMW is not doing as well because of its older image. They need that new 800 series."

BMW's sales dropped 10 percent from last year, joining Maserati and Sterling as the only luxury nameplates to suffer declines.

Truck sales, although not as hot as last year, helped bolster the gain or soothe the pain of some makers.

Ford Division again led in truck sales with 725,417 units. Though 5,228 units less than last year, Ford's truck sales helped keep that division the No. 1 seller of cars and light trucks in the United States for the first-half. Ford Division sold 1,425,437 vehicles compared to Chevrolet's 1,401,578.

Market share is much tighter. With Chevrolet gaining in both car and truck sales, its market share climbed to 19.30 percent, compared to Ford's 19.62 percent. Last year, Ford held a 20.33 percent share to Chevrolet's 18.43 percent.

Truck sales also helped struggling Nissan, the only major Japanese automaker in the doldrums. Nissan's total car sales were down 45,279 units, but truck sales rose 5,945 units to hold Nissan's market share loss to 0.37 percentage points.

Nissan remains the No. 7 vehicle seller in the United States but its 22,736 unit lead over No. 8 Oldsmobile is thinner than it was last year.

European carmakers retained their 4.89 percent share of the car market; European truck sales rose 598 units.

General Motors

Market share gains by Chevrolet, Buick and Cadillac pushed General Motors' overall market share higher for the first half.

Overall, GM's car and truck sales were down 2.42 percent at 2,606,991 units.

Chevrolet was mainly responsible for GM's gains. The division's share of the car market jumped nearly a full percentage point.Truck sales were about even with last year's, but Chevrolet's truck share edged higher, mainly due to the addition of the Lumina APV.

The imported Geo, up 39.42 percent, was a major factor in Chevrolet Division's rise to first place in car sales.

Buick gained 0.08 of a percentage point, although sales were off 3.69 percent during the half.

Cadillac's car share edged up 0.16 of a percentage point. Cadillac's volume, buoyed by Seville and DeVille, was up 879 units over the year-ago half.

Oldsmobile continued to lose ground. Car sales were off 15.26 percent from 1989's dismal results, and car share was off 0.68 of a percentage point.

Pontiac sales also continued to dip. Its share of the car market slipped by 0.38 of a percentage point. Sunbird and Grand Am were the division's only gainers over the first half of 1989.62 percent.

GMC truck sales were off 5.55 percent in the first six months. Its share of the truck market slipped 0.35 of a percentage point to 6.97 percent.

— Michelle Krebs

Ford Motor Co.

Ford Motor Co. lost more than 1½ points of car market share in the first half of 1990 and picked up a fraction of a point of truck market share for a combined loss of about one percentage point.

Ford and Mercury were responsible for the loss in car market share.

Lincoln's car market share was Ford's bright spot. The luxury car's market share grew to 2.59 percent in the first half of 1990 from 2.04 percent last year.

FIRST HALF

FROM PAGE 21

Mercury's car market share dropped nearly one percentage point in the first half, dipping to 4.07 percent from 4.96 percent last year.

Ford's biggest market-share sieve continues to be its high-volume Escort model, which is experiencing lower production because of the changeover to the 1991 model introduced in April.

Ford's Escort sales for the first half of 1990 were down 31,997 units, or 18.35 percent, from the first half of 1989.

Mustang, Thunderbird, Taurus and Tempo declined. LTD Crown Victoria sales rose 6.51 percent this year, despite the fact that it will receive all-new sheet metal in early 1991 and buyers could have been expected to hold back their purchases.

Lincoln Continental sales were up 9.29 percent in the first half. Town Car sales were up 35.55 percent; Mark VII sales were off 16.43 percent.

Sales of all Mercury sales declined in the first half of 1990.

Sales of Ford light trucks dropped 0.72 percent in the first half of 1990, but market share climbed 0.03 of a percentage point. Ford sold 725,417 light trucks in the first six months of 1990 compared to 730,645 last year.

A bright spot was the performance of the new Explorer. Sales of Bronco II and its replacement, the Explorer, increased 27.82 percent. The Explorer went on sale in March.
